Public Company

PRESS RELEASE

CLARIFICATIONS WITH RESPECT TO THE DISCOVERY OF OIL IN SERGIPE

(Rio de Janeiro, March 13, 2003) PETRÓLEO BRASILEIRO S.A. PETROBRAS, [BOVESPA: PETR3/PETR4, NYSE: PBR/PBRA, LATIBEX: XPBR/XPBRA], Brazil's biggest oil & gas, petrochemicals and energy company is making the following public announcement: with respect to recent news of the discovery of oil in the Sergipe-Alagoas basin:

- 1) Under the legislation in force Petrobras is required to give the ANP 20 days prior notice of the drilling of any well for oil prospecting purposes and, since last year, the ANP has required a summary of the drilling expectations to be attached to the Notification of Well Drilling (NPP), stating the Company's assessment of the probability of success and its expectations as to the volume of oil to be found in the area. It must be underlined that this information is sent to the ANP before the well is drilled.
- 2) On November 11, 2002, Petrobras sent to the ANP the NPP for well 1-SES-147, the first to be drilled in the area of the Sergipe-Alagoas basin. The prospect summary which accompanied the notification states that Petrobras intended to test two exploration objectives at different depths. Taken together, these two intervals were expected to produce a discovery of oil in place of 300 million³m (approximately 1.9 billion barrels) of oil. Based on this volume, a minimum reserve of the order of 60 million m³ (370 million barrels) of oil was projected as a geological possibility. It must be explained that, on average, only 20 to 30% of the volume of oil in place is confirmed as a reserve, in other words capable of being extracted.
- 3) During the drilling of the wildcat well, however, it was found that only the upper interval showed the presence of oil (whose volume is still being estimated). The deeper drilling showed no oil in that interval and disappointed the initial expectations of the volume of oil in place, drastically reducing initial estimates. Information on the result of the drilling was officially communicated to the ANP on January 14 of this year.
- 4) On January 17, 2003, ANP was notified of the second drilling in the area, in an adjacent geological structure (4-SES-149), with the respective evaluations of the probability and expectation of the volume of oil in place. This second well - in which oil was found to be present - is at the final stage of drilling. The volumes discovered are still being estimated. This discovery was notified to the ANP on March 6, 2003, and received by the agency on March 10.
- 5) The ANP advised the press of this discovery in a confused and erroneous manner, mixing information with respect to the initial expectations of the first drilling - estimates made before the well was even drilled - with more concrete data sent to the agency giving the results of drilling the second well.
- 6) In its press release ANP gave an incorrect interpretation of the available data, referring to potential volumes in place as if they were oil reserves available for production. Furthermore, drilling did not confirm the initial expectations of the volume of oil in place.

7) As in the case of previous discoveries, Petrobras followed its normal practice and made no public announcement because evaluations of the volume of oil capable of being exploited and the reserves commercial quality are not yet concluded.

FORWARD-LOOKING STATEMENTS

This press release may contain forward-looking statements. These statements are statements that are not historical facts, and are based on management's current view and estimates of future economic circumstances, industry conditions, company performance and financial results. The words "anticipates", "believes", "estimates", "expects", "plans" and similar expressions, as they relate to the company, are intended to identify forward-looking statements. Statements regarding the declaration or payment of dividends, the implementation of principal operating and financing strategies and capital expenditure plans, the direction of future operations and the factors or trends affecting financial condition, liquidity or results of operations are examples of forward-looking statements. Such statements reflect the current views of management and are subject to a number of risks and uncertainties. There is no guarantee that the expected events, trends or results will actually occur. The statements are based on many assumptions and factors, including general economic and market conditions, industry conditions, and operating factors. Any changes in such assumptions or factors could cause actual results to differ materially from current expectations.
