IMA EXPLORATION INC
Form 6-K
January 18, 2005

UNITED STATES
SECURITIES AND EXCHANGE COMMISSION
WASHINGTON, DC 20549

FORM 6-K

REPORT OF FOREIGN PRIVATE ISSUER PURSUANT TO RULE 13a-16 OR 15d-16 UNDER
THE SECURITIES EXCHANGE ACT OF 1934

For the month of JANUARY, 2005.

Commission File Number: 0-30464

IMA EXPLORATION INC.

(Translation of registrant's name into English)

#709 - 837 West Hastings Street, Vancouver, British Columbia, V6C 3N6, Canada

(Address of principal executive offices)

Indicate by check mark whether the registrant files or will file annual reports
under cover of Form 20-F or Form 40-F: FORM 20-F FORM 40-F

Indicate by check mark if the registrant is submitting the Form 6-K in paper as
permitted by Regulation S-T Rule 101(b)(1): _____

Indicate by check mark if the registrant is submitting the Form 6-K in paper as
permitted by Regulation S-T Rule 101(b)(7): _____

Indicate by check mark whether the registrant by furnishing the information
contained in this Form, is also thereby furnishing the information to the
Commission pursuant to Rule 12g3-2(b) under the Securities Exchange Act of 1934.
YES NO

If "Yes" is marked, indicate below the file number assigned to the registrant in
connection with Rule 12g3-2(b): 82-_____

SIGNATURES

Pursuant to the requirements of the Securities Exchange Act of 1934, the
registrant has duly caused this report to be signed on its behalf of the
undersigned, thereunto duly authorized.

NEWS RELEASE

JANUARY 13, 2005

PHASE III DRILLING INTERSECTS THICK MINERALIZED BODY AT CALCITE HILL,
470 METRES NORTHWEST OF NAVIDAD HILL

IMA EXPLORATION INC. (IMR - TSX.V, IMXPF - OTC.BB) is pleased to announce the results from the first 13 holes completed during the Company's Phase III drill program on it's 100% owned Navidad silver discovery in Patagonia, Argentina. Seven of the holes were infill drilling on Navidad Hill and the Connector zone and six holes targeted Calcite Hill in the area of hole 88 defining a thick mineralized body that remains open on three sides. Hole 88 intersected 72.3m of 202 g/t silver (reported on Sept. 8, 2004) and is located 470 metres northwest of the nearest drilling at Navidad Hill. Prior to today's announcement, hole 88 was the only hole completed in the vicinity of the Calcite Hill target (see attached map and table).

AT CALCITE HILL, HIGHLIGHTS INCLUDE HOLES 124 AND 126 THAT INTERSECTED 122.6 METRES OF 195 G/T SILVER (5.7 OZ/TON) AND 196.1 METRES OF 113 G/T SILVER (3.3 OZ/TON), RESPECTIVELY. Continued phase III drilling will target extensions to this zone with the objective of defining resources at Calcite Hill and adding to the 268 million ounces of silver (80.8 Mt @ 103 g/t silver, see December 1, 2004 release) currently reported at Galena, Connector, and Navidad Hills.

Drilling to date at Calcite Hill (seven drill holes ranging in length from 149.1 to 283.5 metres) has defined a wedge-shaped body of silver mineralization which increases in thickness towards the northeast and is hosted within a trachyandesitic flow-dome similar to that which hosts mineralization at Navidad and Galena Hills. Holes 125, 88, and 124, all drilled on section 49,200E (section posted at www.imaexploration.com), define this wedge that reaches a maximum vertical thickness of approximately 120 metres in hole 124 and remains open further to the northeast. Mineralization consists of a lead-rich upper zone of breccias and veinlets filled by galena with lesser calcite and barite and a lower zone dominated by calcite-barite veinlets with common native silver and fine silver sulphides/sulphosalts. Drill holes 121, 123, and 125 were drilled to the south or southeast of the thin edge of the wedge and intersected minimal thicknesses of the volcanic host rock that contains the silver mineralization.

Drill holes 127 to 131 were collared at the Connector Zone and holes 132 and 133 at Navidad Hill in order to further define the margins of the previously reported resource. The Connector Zone holes appear to have intersected both stratigraphically and structurally controlled styles of mineralization that will require further interpretation and drilling. Hole NV04-133 on the flank of Navidad Hill intersected breccias with galena and barite mineralization with an interval of higher grade mineralization containing 3.9m of 450 g/t silver within a broad zone of lower grade mineralization in trachyandesite volcanic rocks. This intersection is important in that it may open possibilities of additional mineralization styles at Navidad Hill.

Dr. Paul Lhotka is IMA's Qualified Person for the Navidad project under National Instrument 43-101 regulations and has overseen all aspects of the current program. For more information and maps depicting the work described herein please visit IMA's web site at <http://www.imaexploration.com/>.

NOTES:

1. All length weighted averages (LWA) results are "uncut".
2. Hole NV04-126 was shut down in mineralization at a depth of 283.5m due to limitations of the drill when drilling at the shallow dip of -50(Degree). The full depth extent of this mineralization will be investigated with subsequent drillholes.
3. Hole NV04-129 was shut down before reaching it's intended target due to problems with drilling conditions. Hole 130 was collared from the same location and reached the intended target.
4. A table with full results to date and drill hole locations, orientations, and lengths is available at IMA's website: www.imaexploration.com
