Enclosure: A press release dated January 30, 2003, announcing Pechiney's 2002 annual results.

PRESS RELEASE

January 30, 2003

Annual Results 2002

Pechiney announces a net loss of € 50 million in 2002, corresponding to adjusted net income (*) of € 211 million, or 2.69 euros per share, down 28% from the previous year. At € 407 million, earnings from operations declined 26% and were slightly higher than the estimate of € 400 million made last October. The net dividend proposed per common share "A" is unchanged at € 1.00.

Major events in the year

- **Good operating performance in a particularly difficult economic environment.** The decline in the price of aluminum, of geographical premiums and in the parity of the U.S. dollar alone explain the decrease in the Group's earnings from operations. Thanks to its operating performance, the Group therefore succeeded in 2002 in offsetting the sharp drop in sales volume in aerospace and packaging, as well as the absence of a recovery in the United States.
- **Pechiney Continuous Improvement System.** As of December 31, 2002, cumulated Continuous Improvement Gains are estimated at € 130 million, in line with the objective set at the end of 2001.
- **Successful integration of the acquisitions made in 2001:** Eurofoil, Soplaril, Tomago.
- **Non-recurring charges of € 315 million before taxes,** mainly linked to assets depreciation and goodwill amortisation, calculated in accordance with the new US GAAP SFAS 142 and SFAS 144 (accounted for under Exceptional Goodwill Amortisation for € 98m and under Restructuring expense, Other expense/income for the rest).
- **Cash Flow from Operations was higher in 2002,** thanks to reduced working capital.
- **Acquisition of Corus' aluminum conversion assets.** Preliminary agreement signed on October 23, 2002.
- **AP50 Project.** Pechiney signed an energy supply agreement with Eskom (South Africa), achieving a major step forward in its first project to build an aluminum production facility using AP50 technology.
- **New corporate organization in three sectors:** Primary Aluminum, Aluminum Conversion and Packaging.
- **Pechiney's divisions will continue to adapt in 2003.** These have initiated several restructuring procedures in January, which may lead to a decision, in 2003, to close several production facilities. Should such decisions be made, they could translate, during this fiscal year, into estimated restructuring charges, which could range from €50 million to €70 million.

2003 Outlook:

The year 2003 has begun in an environment marked by major political and economic uncertainty which affects all of our activities, with particular reference to the impact of the very unfavorable trend in the parity of the U.S. dollar and current market conditions. In Aluminum Conversion and Packaging, our sales should, nevertheless, benefit from the end of the destocking phase observed in 2002, with pressure on prices which will remain strong in certain segments. In such an environment, the Group's priority is to continue to achieve the benefits of the Pechiney Continuous

Improvement System, in line with the objectives defined a year ago. These efforts will be complemented by the restructuring, and on some occasions the closing, of activities which are unable to demonstrate their viability. These measures, though difficult, are necessary to allow the Group to maintain its competitive position and continue to grow.

(*) Published net income per share restated to reflect the impact, after taxes, of restructuring expense, other (expense) income and other non-recurring items.

Main trends in 2002

In 2002, the Group reported a net loss of € 50 million, or -0.66 euros per share, compared with net income of € 233 million (2.92 euros per share) in 2001. This result includes a significant amount of non-recurring expenses (in large part with no impact on the cash flow) primarily linked to restructuring, exceptional depreciation of assets and amortization of goodwill, calculated in accordance with the new US GAAP SFAS 142 and SFAS 144. At 2.69 euros, adjusted net income per share (1) was down 28% in 2002 from 3.76 euros in 2001.

In 2002, the **Primary Aluminum sector** (new organization) was affected by unfavorable market conditions (average realized aluminum price down 8.4% from 2001, fall in geographical premiums, negative trend in the parity of the U.S. dollar vis-a-vis the euro and fall in silicon prices), which had a negative impact of € 160 million at the earnings from operations level, which compares to a yearly decrease of € 142 million for the sector. Such impact from external factors could therefore only partially be compensated by the progress made otherwise by the sector. Several successes were reported in the sale of technology (winning all the large smelter expansion contracts on the market in 2002), production was increased through, in particular, the acquisition of its additional 15.5% equity interest in the Tomago facility in October 2001, and production costs for the sector were kept unchanged despite several technical incidents during 2002.

In Europe, the **Aluminum Conversion sector** demonstrated its ability to maintain earnings from operations in 2002 at the same level as in 2001, in spite of a significant decline in demand in markets linked to investment and a sharp drop in the aerospace sector. This performance was due to the capacity of the Issoire facility to adapt rapidly to the economic downturn, Continuous Improvement Gains that exceeded objectives, and strong operating performance as well as a favorable environment in markets related to consumer goods (can stock, automotive, foil and thin foil). In the United States, the product mix at the Ravenswood facility was adversely affected by the forecast decline in orders from Boeing, the impact of which was not offset by the upswing in shipments of standard rolled products. A major recovery program was launched at the plant in the fall.

The **Packaging sector** reported very good performance in terms of cost reduction through the systematic implementation of the Pechiney Continuous Improvement System. This advance was masked by a particularly difficult economic environment in 2002, due to persistent sluggishness in demand in most of its markets, especially for luxury products and cosmetics. Excluding the parity impact, earnings from operations for the sector were at the same level as in 2001, despite very difficult trading conditions.

(1)Published net income per share restated to reflect the impact, after taxes, of restructuring expense, other (expense) income and other non-recurring items.

Finally, earnings from operations in **International Trade** totaled a record € 73 million, representing an increase of 33%, as a result of active physical trading operations and, to a lesser extent, the consolidation of Pechiney Far East.

Continuous Improvement

The year 2002 saw the first benefits from the Pechiney Continuous Improvement System, with cumulated savings, gross of inflation, of € 130 million, in line with the objective announced at the beginning of the year.

2002 Cumulated Continuous Improvement Gains

The implementation of the Continuous Improvement System and team training produced their first results in terms of safety and the quality of customer service in all sectors. The financial savings exceeded objectives in Packaging and Aluminum Conversion, where the quality of the implementation of the Pechiney Continuous Improvement System confirmed its great potential. In the Primary Aluminum sector, the progress made was somewhat eroded by a number of production incidents.

Annual shareholders' meeting

Pechiney's Annual Shareholders' Meeting is scheduled for April 3, 2002. Both an ordinary and extraordinary Shareholders' Meeting are planned. A net dividend of € 1.00 per common share "A" and of € 1.65 per preferred share "B" has been proposed with payment on May 7, 2003, excluding the corresponding *avoir fiscal* (applicable French withholding tax).

French- and English-language versions of the proposed resolutions will be available at www.pechiney.com once an official announcement of the meeting has been published. Note should be made that **as a result of a change in French regulation, participating shareholders are authorized, as was not the case in the past, to sell their shares at any time before the shareholders' meeting, regardless of their prior registration to this meeting.**

Recent developments - fourth quarter

The fourth quarter of 2002 was mainly marked by the announcement, in October, of a **preliminary agreement for the acquisition of Corus' Aluminum Conversion assets**. Pechiney hereby implements its strategy of profitable growth in key markets - aerospace and automotive. The operation, which is subject to the approval of anti-trust authorities and to a favourable end to currently ongoing internal authorization procedures at Corus, will provide Pechiney with many synergies and should be earnings enhancing as of the first year.

In December 2002, Pechiney also announced a **Group reorganization**. The Group created an upstream sector - **Primary Aluminum** - which regroups activities in primary aluminum, bauxite-alumina, technology and smelter equipment sales, as well as the Ferroalloys division (PEM). This new sector will be under the responsibility of Jean-Dominique Senard. **Aluminum Conversion**, which will keep its current structure, will become a separate sector under the management of Pierre Vareille as of July 1, 2003. The **Packaging** sector, under Christel Bories, remains unchanged. Last but not least, the **International Trade** division, which cuts across division lines, will be managed separately, overseen by Olivier Mallet, the Group's Chief Financial Officer.

Segment breakdown - fourth quarter

Consolidated net sales in the fourth quarter were stable at € 2,678 million. On a comparable basis, there was a decrease of 9%. This difference was mainly due to the consolidation of Pechiney Far East, an International Trade subsidiary.

Earnings from operations - fourth quarter

At € 71 million, **earnings from operations** in the fourth quarter decreased by 32% from the same period in 2001 and by 25% from the previous quarter.

In comparison with the first nine months of the year, the fourth quarter was marked by the following trends.

There was an amplification of the negative impact of the rise in the parity of the euro vis-a-vis the U.S. dollar on operating results in the **Primary Aluminum** sector, while the negative effect of the decline in the price of aluminum, which had begun in the third quarter of 2001, was attenuated.

In **Aluminum Conversion** there was a slight upswing in shipments to the aerospace market in Europe.

In **Packaging**, a decrease in sales volume was confirmed in plastic packaging with no clear signs of a recovery in beauty and cosmetics markets.

Primary Aluminum (Aluminum Metal, Bauxite - Alumina and Ferroalloys)

At € 50 million, earnings from operations in the fourth quarter of 2002 decreased by 29% from the same period in 2001. Compared to the fourth quarter of 2001, the negative impact from external factors (decline in the parity of the U.S. dollar, aluminium price, geographical premiums, silicon prices) amounted to -€39 million.

Strong growth in the volume of technology sales (second potline at Mozal and third potline at Hillside) made it possible to offset some of the effects of the difficult economic environment. In addition, except for the PNL plant which has experienced production difficulties due to exceptional weather conditions, all of the Group's aluminum plants posted a satisfactory level of production in the fourth quarter.

In comparison with the third quarter of 2002, earnings from operations were down 29%, mainly owing to the major decrease in the parity of the U.S. dollar during the period.

In 2003, while the price of aluminum seems relatively stable, the recent decline in the parity of the U.S. dollar, vis-a-vis the currencies of most of the countries that produce primary aluminum, is likely, if the situation lasts, to have a strong negative impact on results in this sector.

Aluminum Conversion

In Aluminum Conversion, earnings from operations in the fourth quarter of 2002 increased by € 10 million over the same period in 2001, and were stable compared with the previous quarter.

Earnings from operations reported by **European activities** rose from € 2 million in the fourth quarter of 2001 to € 15 million in the same period in 2002. In the third quarter of 2002, earnings from operations totaled € 12 million.

The increase was mainly due to:

- the good performance in terms of production costs at all European activities, through the implementation of the Pechiney Continuous Improvement System;

- the resilience demonstrated by the Issoire plant, which, in a depressed aerospace market, adapted its manufacturing base and production capacity, thereby maintaining its operating result at the level reported in the fourth quarter of 2001,
- the increase in sales volume in the markets for automotive, heat exchangers and foil and thin foil, within the last category a major improvement in productivity at the Rugles plant.

In the United States, the net operating loss reported by the **Ravenswood** plant went from € 12 million in the fourth quarter of 2001 to € 15 million in the same period in 2002. In the third quarter of 2002, the net operating loss stood at € 12 million. This trend was due to the accounting in the fourth quarter of non-recurring expenses, in particular linked to impairment of inventories. A major plan targeting industrial and commercial recovery was launched in September 2002. It was followed in December by an agreement with the local union to re-negotiate the current labor contract for two years until mid-2005.

In 2003, the sector is expected to improve its performance significantly. In Europe, it will benefit from an upturn in aerospace shipments as can be seen from orders booked at the end of 2002. In the United States, the profitability of the Ravenswood plant should improve, without, however, breaking-even in 2003 under current market conditions.

Packaging

In Packaging, earnings from operations totaled € 24 million in the fourth quarter of 2002, compared with € 35 million in the same period in 2001, and € 129 million in 2002 versus € 136 million in 2001, down 5%.

The different activities in the Packaging sector reported very contrasting results in 2002.

Despite the negative impact of reduced sales volume, the **Plastic Packaging** division reported a 36% increase in earnings from operations in 2002. This performance was mainly linked to the successful, systematic implementation of the Pechiney Continuous Improvement System, to the successful integration of Soplaryl and to a positive scissors effect between selling prices and raw materials costs in the first half of 2002. In the fourth quarter, the decline in sales volume tended to gain ground in this market, which came on top of a rise in resin prices.

The divisions serving cosmetics - **Cebal** - and luxury goods - **Techpack International** - were affected by a sharp drop in sales volume (especially in luxury markets), which was partly due to strong destocking by clients and led to a decline in selling prices during the second half. These factors could not be fully offset by the good performances achieved through Pechiney's Continuous Improvement System. Earnings from operations in these activities therefore decreased significantly in 2002.

In the fourth quarter, in the beauty-cosmetics segment, the sector maintained sales volume at a level comparable with the already weak volumes reported in the same period in 2001.

In 2003, while awaiting market recovery and in an economic environment which remains difficult at the beginning of the year, the Packaging sector should continue to benefit from the positive impact on earnings from operations of the Pechiney Continuous Improvement System and the restructuring measures under way at Techpack International.

International Trade

The year 2002 was particularly satisfactory for this division, which reported a 33% rise in earnings from operations to € 73 million.

This performance was due to strong growth in results in all physical trading segments, and, to a lesser extent, to the results of Pechiney Far East (consolidated in January 2002), which considerably offset the lackluster economic environment in which the network of distribution and sales agencies operated.

Other statement of income items

Net financial expense totaled € 11 million in the fourth quarter and € 49 million for the whole year, down € 19 million from 2001. This reduction of financial expense mainly reflected a sharp decline in interest rates in the United States and Europe.

Current and deferred income taxes in the period represented a tax asset of € 39 million, compared with a liability of € 16 million in 2001. In 2002, the effective tax rate was 34%, significantly less than the Group's forecasts.

Finally, in the fourth quarter, the Group recorded € 126 million in **restructuring charges, other exceptional depreciation of fixed assets and investments and other (expense) income**, of which € 114 million represented non-recurring charges and € 50 million exceptional amortization of goodwill.

The majority of these non-recurring expenses concerned cosmetics and luxury packaging, and represented depreciation of fixed assets and restructuring at Cebal and Techpack International (TPI), as well as additional exceptional amortization of goodwill at TPI in the amount of € 43 million. The other non-recurring items concerned the Aluminum Conversion sector (mainly Ravenswood) and the Primary Aluminum sector. At all of the manufacturing facilities in which the absence of adequate prospects of profitability led to exceptional depreciation of fixed assets, the Group announced the launch of labor consultation procedures related to proposed recovery plans.

Amortization of goodwill

In addition to the exceptional amortization of goodwill described above, in the amount of € 50 million, the Group continues to amortize its goodwill regularly according to French accounting principles. A recurring expense of € 7 million was, therefore, recorded in the fourth quarter of 2002, bringing the total recurring expense for 2002 to € 31 million.

Cash Flow

Cash flow from operations was higher in 2002 than in 2001 thanks to improved working capital requirement.

Balance sheet items

As of December 31, 2002, **net indebtedness** totaled € 1,437 million. Compared with shareholders' equity and minority interests of € 3,163 million, the debt-to-equity ratio was 0.45, compared with 0.42 as of December 31, 2001.

As of December 31, 2002, the total number of outstanding shares was 82,513,683, of which 4,716,938 were owned by the Company (treasury stock). In the fourth quarter, 382,700 shares were bought by Pechiney, bringing the total number of shares bought in 2002 to 1,162,274.

The accounting principles applied by the Group in the preparation of its financial statements differ in certain points from generally accepted accounting principles in the United States. The impact of these differences is presented in the accompanying tables and explained below.

Accounting for derivatives and hedging operations

Pechiney's financial statements prepared in accordance with US GAAP comply with SFAS 133, which requires that derivative instruments (foreign exchange, interest rates, commodities) be recognised as assets or liabilities and measured at fair value. This standard also sets the criteria for hedge accounting.

The application of these criteria means that certain hedging activities, which are efficient from an economic point of view, are no longer recognised as hedging activities. As a result, gains and losses resulting from the mark to market of certain hedging instruments are to be recorded in net income or in equity, with no recognition of the inverse effect of the mark to market of the hedged items.

For this reason, the impact of this standard on results varies according to market conditions and is difficult to forecast. The application of SFAS 133 generated a net accounting gain (with no impact on cash flow) of € 4 million in the fourth quarter of 2002 and of € 25 million for the year 2002.

Amortisation of goodwill

Pechiney's financial statements prepared in accordance with US GAAP comply with SFAS 142, which requires that goodwill be no longer amortised, but be regularly tested for impairment.

The application of SFAS 142 led to the cancellation of the recurring amortization charge recorded in the French GAAP financial statements. Impairment tests resulted in the recording of goodwill write-downs amounting to € 31 million recorded as effect of changes in accounting principles at January 1, 2002 and relating to the year 2002. These write-downs are also recorded in the French GAAP financial statements, but for lower amounts, due to the recording of recurring goodwill amortization under French GAAP.

Differences in the balance sheet included the impact of SFAS 133 and SFAS 142 (respectively increases in shareholders' equity of € 15 millions and € 21 million) and a € 141 million reduction in shareholders' equity due to the different way additional pension liabilities are recorded.
