furnishing the information to the Commission pursuant to Rule 12g3-2(b) under the Securities Exchange Act of 1934.

Yes No

EBITDA of R\$ 2.6 BILLION and 48% MARGIN in 1H05

São Paulo, Brazil, August 9, 2005

Companhia Siderúrgica Nacional (CSN) (BOVESPA: CSNA3) (NYSE: SID) releases its **second quarter 2005 results (2Q05)**, in accordance with Brazilian accounting principles and denominated in Reais. The comments presented herein refer to consolidated results and the **comparisons refer to the second quarter 2004 (2Q04)**, unless otherwise stated. On June 30, 2005, the Real/US dollar exchange rate was R\$ 2.3504.

Executive Summary

- **Sales** in the quarter totaled 1,137 thousand tonnes, 60 thousand tonnes down compared to the previous quarter. Exports share in total sales grew from 25% to 33%.
- **Prices** in the domestic market fell only by 4% in Reais and export prices fell by 10% in dollars. The Company does not expect further significant adjustments in prices: the downward trend in steel prices should be interrupted in the end of the third quarter.
- **Net revenue** year-to-date is 22% higher than in the same period of the previous year.
- The **coke cost** was US\$ 380/t, compared to US\$ 408/t in 1Q05 and US\$ 445/t in 4Q04. **Coal cost** was US\$ 112/t, against US\$ 107/t and US\$ 100/t, respectively.
- **EBITDA** was R\$ 1.2 billion in the quarter and R\$ 2.6 billion in the first half of the year, with a 48% margin in the quarter and year-to-date.
- **Net debt** returned to 1x EBITDA level after the dividend payment. Securitization of receivables totaling US\$ 250 million (cost of 6.1% p.a.) and perpetual bonds issued in the amount of US\$ 750 million (9.5% p.a.).
- **Net income** accumulated in 2005 is 50% higher than the first half of 2004.
- BNDES approved financing of R\$333 million for the **Coal Terminal Expansion** project, as part of the Casa de Pedra Expansion project. This amount represents 75% of the total to be invested in the coal terminal expansion project.

Macroeconomic and Industry Scenario

Consumption of flat steel in Brazil decreased by 7% compared to the same period of previous year, but the six-month accumulated figure comparison shows a growth of 3%. Leading this sales increase were the automotive, construction and packaging sectors.

The automotive sector production grew by 18% in the quarter, mainly driven by the 43% increase in exports.

Although construction sector consumption fell by 15% in the quarter due to high inventory levels, half-year accumulated figure grew by 2.6% compared to 2004. Tiles, profiles and large-diameter tubes market led this increase.

Sales of tin plates grew by 12% due to good performance in milk, milk-based and tomato-based products markets.

Distribution and home appliance sectors presented weak performances, down by 16% and 14%, respectively. However, the accumulated year-on-year comparison remained flat.

In the external front, American, Asian and European markets experienced production cuts aiming at restraining the strong decrease in prices and aligning the supply and demand balance. Weak performance in the United States is due to weak demand in the automotive sector and above-the-average inventory levels in service centers.

The fall in international steel prices and the output growth above the consumption growth have also pressured market prices in China. Buyers are waiting for further price decrease to go back to the market and restore their inventories. It is expected that this price drop will reach its bottom limit by the end of third quarter due to inventory cycle and non-sustainability of margins in the steel mills.

Output

After the low output level in Presidente Vargas Mill in the first quarter of the year as a consequence of partial revamps and maintenance interventions anticipated due to a failure in electricity transmission lines of Furnas, occurred in January, the Company restored its usual levels of crude steel production, as shown in the table below. The year-to-date accumulated production decreased by 7%.

Rolling and finishing lines maintained lower rate of production in the first half of the year, reducing by 15% the total volume of finished products, reflecting the Company's supply and demand fine-tuning policy. Exceptions were the galvanized and cold rolled production, which was reduced respectively by only 30 thousand and 20 thousand tonnes.

Production (data in thousand t)	1Q 04	2Q 04	1Q 05	2Q 05	1H 04	1H 05
Presidente Vargas Mill (UPV)						
Crude steel	1,355	1,368	1,167	1,362	2,723	2,529
Finished Products	1,255	1,273	1,046	1,096	2,528	2,142
CSN Paraná	38	64	55	33	102	88
GalvaSud	35	24	75	81	59	156

The highlight for second quarter were the monthly record production in tin-coating lines 92.7 thousand tonnes in May, surpassing the previous record of 92.0 thousand tonnes of August 1998 and the beginning of simultaneous injection of pulverized coal and natural gas in blast furnace #3, in June, thus completing the introduction of this new technology in CSN, which began in March 2004 in blast furnace #2. The main goal of this new technology is to reduce the reliance on coke. Once natural gas injection targets expected by the Company are reached, the total cut-back on coke can be up to 200 thousand tonnes.

Sales

Sales volume totaled 1,137 thousand tonnes, 60 thousand tonnes down compared to previous quarter. Due to weak demand in local market (refer to Macroeconomic and Industry Scenario) and to a continuing downward trend in international prices (as a result also of the weak demand in respective main consumption markets), the Company has decided not to keep the sales volume but to maintain the profit margins. As a consequence, sales in local market dropped by 130 thousand tonnes, only partially offset by the increase of 70 thousand tonnes in exports. Year-to-date accumulated volume is 6% lower than first half of 2004.

With the reduction in sales volume, inventory levels of finished products remained virtually unchanged compared to March, only presenting a slight decline.

The sales mix remained unchanged compared to previous quarter, with a 52% share of high value-added products (galvanized products and tin plates).

Breakdown by sector also remained stable compared to first quarter, with 18% Automotive, 32% Home Appliances & OEM, 32% Distribution, 43% Construction and 13% Packaging. It is worth to note that the Company has a significant share of sales of galvanized products by sector: 76% of Home Appliances & OEM, 66% of Distribution and 79% of Construction. Breakdown by product has not largely changed, as shown in the graph.

Prices

As a result of economic slowdown and its impact in steel demand, in addition to the high levels of inventories in all production chain, international sales prices have embarked on a downward trend in the end of first quarter 2005. Taking as reference the price of hot rolled products destined to European markets*, the accumulated drop in prices between July and March was 17%, slightly lower for other products (cold rolled and zinc coated products).

This scenario, reflected also in local market, impacted CSN's sales prices. CSN's export prices fell by 16%, on average, in second quarter; however, in dollar terms, the drop was only 10%, approximately 40% less than the price drop in international markets. This is due to the differentiated sales portfolio of the Company: zinc coated products dropped by 8% and tin plates prices increased by 0.4% (both in dollar terms).

In the domestic market, fall in CSN's prices were even lower - 4% drop in Reais and 3% gain in dollars despite of high inventories in distribution sector and the economic slowdown, offset by high-value-added products portfolio, similarly to what happened to exports.

Market expects that inventory and demand return to normal levels by the end of third quarter, both in international and local markets. Together with the continuing production cut policy currently set in place by main producers, a better outlook for prices can be expected starting as of that moment of the year. Before that, prices should continue to be pressured downwards, although the Company does not expect further significant falls.

*EU export FOB ARA port (Antwerp, Rotterdam and Amsterdam); Source: CRU - Steel Sheet Products

Net Revenue

As a result of lower sales volume and prices, net revenue fell by 11% compared to previous quarter and remained flat compared to same period of 2004 (0.6% fall). This performance can be explained mainly by a fall in revenue from sales to local market, since revenue from exports increased slightly (1.7%, or R\$12 million).

Despite the worse performance in second quarter, the year-to-date revenue is 22% higher compared to the same period of previous year.

Starting this quarter, we are presenting net revenue breakdown by business segment, which are shown in the graph. It is worth to point out the growth in Energy and Logistics business, due to the consolidation of Itasa and MRS in the fourth quarter of 2004.

Production Costs (Parent Company)

The lower production level in the first quarter affects comparison to the second quarter, as a consequence of failure in transmission lines of Furnas (refer to 1Q05 Earnings Release). Thus, of the R\$47 million (+8%) increase of in raw materials cost in the second quarter, R\$70 million are due to increase in consumption, R\$3 million are due to price increase, and both are offset by the positive impact of the appreciation of Real amounting to R\$26 million.

It is important to note that the increase in Raw Materials represented 52% of the total increase in production costs by 8%. Labor, which increased by 39%, was accountable for 32% of total, while General Costs and Depreciation,, which increased respectively by 2.5% and 4%, represented nearly 9% and 7% each of the total. The increase in Labor mainly reflects the wage readjustment resulting from annual negotiations and bonuses for renewal of the agreement of work shifts, granted in May.

Compared to the same quarter of previous year total costs increased by 3.5% Raw Materials increased only by 3%, Labor increased by 11%, General Costs and Depreciation by 2.5% . In this comparison, Raw Material costs increase is due to price factor, which represented a R\$99 million impact, mainly due to increases in coal, zinc and scrap, positively offset by the reduction of consumption (impact of R\$25 million) and by the foreign exchange variation (impact of R\$56 million).

Regarding the main cost items coal and coke, in 2Q05 we noticed opposite price trends in those two raw materials, in line with the expectations reported in the fourth quarter 2004 (which should continue till the end of the year). Average coke cost in second quarter was US\$380/t, compared to US\$408/t in previous quarter and US\$445/t in 4Q04. In the same comparison base, the average coal cost was US\$112/t, compared to US\$107/t and US\$100/t,

respectively. Expected acquisition cost (distinct from production cost) for the year is around US\$120/t for coal and US\$250/t for coke (CIF Sepetiba). In June, inventory levels of coal and coke reached regular average levels: 3 months of consumption. With this inventory, added to the last purchase made in June (US\$220/t CIF Sepetiba), the Company has no intention to acquire coke in the second half of the year.

Operating Expenses

Operating expenses reached R\$266 million this quarter, a 7.7% increase compared to previous quarter, mainly due to higher labor expenses (hike in wages after the collective labor agreement in May).

In the first half comparison year to year, already excluding the effect of the consolidation of MRS and Itasa, we would have total expenses of R\$489 million, or a 12% increase. This change was mainly due to the same factors described in the previous paragraph.

EBITDA

The table and graph in this section show the EBITDA performance over the last quarters, highlighting that starting in the fourth quarter the effects of MRS and Itasa consolidation and PIS/Cofins adjustments were excluded for comparison purposes. It is noticeable the weak performance of 2Q05 compared to other quarters, due to lower sales prices and volumes in the period. In the first half 2005 over the same period of 2004, EBITDA grew by 20%, accumulating R\$2,424 million with a 46% margin (100 basis points increase).

EBITDA* and EBITDA Margin* Change	2Q05 x 1Q05	2Q05 x 2Q04	1H05 x 1H04
EBITDA (var. %)	-14	-5	+20
Margin (var. p.p.)	0	+1	+1

* Excluding MRS/ITASA consolidation and PIS/COFINS effects

Net Financial Result and Debt

Net financial debt (includes financial expenses and income, in addition to net monetary and foreign exchange variations) was negative R\$214 million, compared to negative R\$104 million of first quarter. This change is mainly due to losses in financial transactions, which were only partially offset by positive foreign exchange and monetary variations over the foreign currency-denominated debt.

Net debt increased by R\$2,057 million, mainly caused by dividend payments in June, totaling R\$2,268 million. Thus, by the end of the quarter, the Net Debt/EBITDA ratio returned to 1x, in line with the ratio in the end of 2004. For the first half of the year the average cost of debt was 9.4% p.a., equivalent to 51% of CDI.

The reduction of gross debt in the period was due to amortization payments, which surpassed the total amount of US\$250 million raised by receivables securitization in May.

After this securitization and the issuance of perpetual bonds in the amount of US\$750 million in July the Company does not intend to access the capital market for the rest of the year (for further details on these two capital raising transactions, refer to Recent Developments section). The payment schedule (principal+interest) for the next two quarters is as follows:

Amortizations (US\$ million)	3Q05	4Q05	2H05
Debt in US\$	232	523	755
Debt in R\$	7	47	54
Total	239	570	809

Income Taxes

Income taxes and social contribution expenses were R\$314 million, a R\$20 million increase over the previous quarter despite the lower income before taxes, which means an increase in effective tax rate from 29% to 43%. This raise in tax rate was chiefly due to non-deductible losses in the equity income line.

Net Income

Due to lower operating income and net financial results and, in a lesser extent, to increased income taxes and social contribution expenses, net income fell by R\$300 million compared to previous quarter, a drop of 42%.

However, the accumulated year-to-date net income in 2005 is 50% higher than the first half of 2004. In addition, the R\$1,136 million net income accumulated in 2005 represents 57% of the total net income for the year 2004.

Capex

Capex in the quarter totaled R\$239 million, of which R\$62 million were destined to Sepetiba's Port (Tear) expansion project, part of the Casa de Pedra expansion project, and R\$28 million was destined to MRS (corresponding to the 32% stake CSN holds in that company).

In first half of 2005 Capex reached R\$391 million, of which R\$113 million were invested in the Tear expansion project and R\$50 million in MRS. The remaining balance was destined to projects related to the maintenance of operating and technological excellence in CSN's and its subsidiaries' plants.

Working Capital

There was a positive change in working capital, comparing the amount registered in June 30 to the one registered on March 30. In the assets side, inventory was reduced, due to the reduction of raw materials (coal and coke) and finished products, offset by the increase in products in process, spare parts and supplies and import in progress. In turn, receivables line increased basically due to longer payment terms given to clients.

In the liabilities side, all lines increased, highlighting the suppliers' line.

Account	1Q05	2Q05	In R\$ million Change
Assets	3,548	3,606	-58

Working Capital	(1,604)	(1,368)	+236

Recent Developments

Coal Terminal Expansion Project Financing

BNDES approved the financing in the amount of R\$333 million on July 20, destined to the Coal Terminal expansion project, one of the three investments that comprises the Casa de Pedra expansion project. The project aims at adjusting and expanding the port, currently in use for coal and coke imports, for ore exports. When full operation is reached, the terminal will have 30 million tons iron ore capacity.

Financing represents around 75% of the total amount to be invested in the project; and the remaining balance will come from Company's own resources.

Securitization Program

In May 2005, the Company issued its fourth series of receivables securitization, totaling US\$250 million, within the scope of program initiated in June 2003. Of the funds raised, approximately US\$ 80 million were destined to the payment of second series. It is important to note that the better maturities and costs for this last securitization, contributing to extend the average maturity and to reduce the Company's average cost of debt. Maturities and costs for each series are as follows:

Series	Issuing Date	Value (US\$ million)	Term (years)	Grace Period (years)	Cost (% p.a.)
First	Jun/03	142	7	2	7.28%
Second	Aug/03	125	3		Libor+1.55%
Third	Jun/04	162	8	3	7.427%
Fourth	May/05	250	10	3	6.148%

Perpetual Bonds

On July 7, the company issued US\$500 million as perpetual bonds, at 9.5% p.a., just 22 bps above the Brazilian Treasury bond yield due in 2040 and with coupon of 11% p.a.. Facing strong demand, the Company reopened the offering, raising additional US\$250 million on July 14. These funds are mainly destined to short term debt payments (refer to Net Financing Results and Debt section). Although there is no maturity for these bonds, the Company has the option to repurchase the total debt each quarter after the fifth year from the issuance date (the partial repurchase is not allowed).

Shares Buy-Back and Write-Off Program

Starting in the beginning of 2004, the Company's Board of Directors approved a number of share buy-back programs, as follows:

Program	Number of Shares (in million)	Date of Approval	Expiry Date
First	4.7	Apr/29/04	Jul/27/04
Second	7.2	Jul/28/04	Nov/01/04
Third	6.4	Oct/27/04	Fev/11/05
Fourth	5.0	Dec/22/04	Jun/19/05
Fifth*	15.0	May/26/05	May/26/06

*The fifth program substituted the fourth

According to the approved programs, the Company bought back shares throughout 2004, at a total cost of R\$440 million, as shown in the table below.

Period in 2004

Number of

	Shares Acquired	Average price paid per share
May	517,600	34.63
June	3,470,600	37.78
August	760,199	45.16
October	82,000	41.39
November	3,383,900	49.51
December	1,809,300	49.52
Total	10,023,599	43.93

On July 7, the Extraordinary Shareholders Meeting approved the write-off of 14,849,099 shares held in treasury. Up to this date, the Company had already acquired, as part of the Fifth Buy-Back Program, 2,210 thousand shares, spending R\$ 89 million.

Conversion of BNDES shares

In April 2005, BNDESPAR (Brazilian development bank) increased its stake in CSN from 1,023,597 to 18,085,295 shares (corresponding to 6.30% of the total capital), as a result of swap of debentures of sixth series for shares held by Vicunha Siderurgia S.A., according to the terms and conditions of issuance contract of Vicunha Siderurgia S.A. debentures. After this transaction, Vicunha Siderurgia's stake in the Company's total capital decreased from 46.48% to 40.53% .

Audit Committee

In June 2005 an Audit Committee was appointed, in compliance with SEC's rules and, as required, it is composed of three independent members of our Board of Directors: Mr. Fernando Perrone, Mr. Dionísio Carneiro and Mr. Yoshiaki Nakano.

The Audit Committee is responsible for recommending the appointment of independent auditors to the Board of Directors; reporting on the policies and our annual auditing plan submitted by the employee responsible for internal auditing and, on its execution, monitoring and evaluating the results and activities of the external auditors, and identifying, prioritizing, and submitting actions to be implemented by the executive officers; and analyzing the annual report, as well as our financial statements and making recommendations to the Board of Directors.

Board of Directors and Executive Officers

On June 21, the Board of Directors re-elected Benjamin Steinbruch and Jacks Rabinovich as Chairman and Vice-Chairman, respectively, for one year term.

Also on this date the Board elected Enéas Garcia Diniz as Production Executive Officer, for a 2-year term, replacing Nelson Cunha who left the Company on the same date. Mr. Enéas has been working on several positions in the production area of the Company since 1985.

On June 24, Lauro Rezende, Investments and Investor Relations Executive Officer, resigned. These duties have been performed, on an interim basis, by the Company's CEO.

Event in NYSE

On May 10, CSN held the event in New York Stock Exchange for the third consecutive year, with the participation of all executive officers. There was a presentation of the outlook for the market, Company's results for 2004 and for first quarter 2005 and an update about the expected schedule and disbursements for the Casa de Pedra Mine expansion project in the event. The presentation can be found in Company's website.

Investor Relations Website

Aiming at offering updated information with increased transparency, equal treatment and easy access, CSN launched, on August 5, a completely restructured website for the Company's investors and for the public, using the state-of-the-art tools and features available in the market. The new website is part of the initiatives taken by the Investor Relations department to improve services provided for analysts, investors and shareholders.

Outlook

The situation in the Brazilian steel market is similar to the one experienced in U.S. and European markets: Companies reducing its production rates to align to weak demand and to inventory levels above the average throughout the supply chain. According to IISI (International Iron and Steel Institute) data, crude steel production in U.S. and European Union (25 countries) dropped by 2.6% and 1.7% in first half of 2005, respectively, and 1.2% in Brazil. The only

countries that have continued to increase significantly the output are China and India, growing by 28% and 12% in the period, driven by the strong demand in their local markets. Outlook of IBS (Instituto Brasileiro de Siderurgia Brazilian Steel Institute) is a 4.4% decrease in Brazilian crude steel production in 2005.

In a weak demand and high inventory scenario, downward pressure on prices is stronger and international prices (U.S. and Europe) have dropped by 30%, comparing June to December. However the largest companies of these markets are seeking to find a balance between supply and demand, reflecting an historical moment, and should for now on contribute to reduce this downward pressure and keep prices in higher levels compared to average prices of the last years. In addition, raw material prices expected for the next years, specially coal and coke prices, support the positive outlook for steel prices, together with the restoration of inventories to normal average levels, expected for the end of third quarter. It is worth mentioning that some European companies have already considered the possibility of a price increase in fourth quarter. Finally, the economic growth for 2005 estimated for the main steel consumer countries (U.S. 3.6%; E.U. 1.6%; China 8.9%; Source: IMF), although lower than the initially forecasted, lead us to believe that the recent downturn in prices is much more a consequence of a temporary slowdown in demand and high inventories than an indicator of recession or reversion of the growth cycle.

Due to lower than expected sales performance in first half of the year, the Company has reviewed some of its expectations for 2005, as shown in the next table. Basically, the Company expects a sales volume of 5 million tonnes, 300 thousand tonnes lower than the previously projected, and still 300 thousand tonnes above the volume sold in 2004. The local sales and exports mix should also be maintained in comparison to 2004: 70% of sales to local market, compared to initial expectation of 75%. The Company will align its output level to this new sales environment, not increasing the finished products inventory.

Variable	<i>Guidance Revision</i>

Edgar Filing: NATIONAL STEEL CO - Form 6-K
Second Quarter 2005 Earnings Release Conference Calls

CSN will host conference calls to discuss its second quarter earnings on August 11, 2005, as follows:

<p>Portuguese Presentation August 11, 2005 Thursday 9:00 am US ET 10:00 am Brasília Phone:(55 11) 2101-1490 Code: CSN</p>	<p>English Presentation August 11, 2005 Thursday 11:00 am US ET 12:00 pm Brasilia Phone: (1-973) 582-2734 Code: CSN or 6315561</p>
--	---

Companhia Siderúrgica Nacional, located in the State of Rio de Janeiro, Brazil, is a steel complex comprising investments in infrastructure and logistics whose operations include captive mines, an integrated steel mill, service centers, ports and railways. With a total annual production capacity of 5.6 million tons of crude steel and consolidated gross revenues of R\$ 12.3 billion in 2004, CSN is also the only tin-plate producer in Brazil and one of the five largest tin-plate producers worldwide.

Certain of the statements contained herein are forward-looking statements, which express or imply results, performance or events that are expected in the future. They include future results that may be implied by historical results, the statements under Message from CEO and Outlook, the expected nominal cost of gross debt compared to CDI and the expected ratio at 2004 year-end of net indebtedness to EBITDA. Actual results, performances or events may differ materially from those expressed or implied by the forward-looking statements, as a result of several factors, such as general and economic conditions in Brazil and other countries, interest rate and exchange rate levels, protectionist measures in the US, Brazil and other countries, changes in laws and regulations and general competitive factors (on a global, regional or national basis).

FORWARD-LOOKING STATEMENTS

This press release may contain forward-looking statements. These statements are statements that are not historical facts, and are based on management's current view and estimates of future economic circumstances, industry conditions, company performance and financial results. The words "anticipates", "believes", "estimates", "expects", "plans" and similar expressions, as they relate to the company, are intended to identify forward-looking statements. Statements regarding the declaration or payment of dividends, the implementation of principal operating and financing strategies and capital expenditure plans, the direction of future operations and the factors or trends affecting financial condition, liquidity or results of operations are examples of forward-looking statements. Such statements reflect the current views of management and are subject to a number of risks and uncertainties. There is no guarantee that the expected events, trends or results will actually occur. The statements are based on many assumptions and factors, including general economic and market conditions, industry conditions, and operating factors. Any changes in such assumptions or factors could cause actual results to differ materially from current expectations.
