Item 2.02.Results of Operations and Financial Condition

On January 31, 2011, Illinois Tool Works Inc. (the “Company”) announced its 2010 fourth quarter results of operations in the press release furnished as Exhibit 99.1. The Company’s presentation from the fourth quarter conference call held on January 31, 2011 is furnished as Exhibit 99.2.

The Company uses free operating cash flow to measure cash flow generated by operations that is available for dividends, acquisitions, share repurchases and debt repayment. The Company believes this measure is useful to investors in evaluating our financial performance and measures our ability to generate cash internally to fund Company initiatives. Free operating cash flow is a measurement that is not the same as net cash flow from operating activities per the statement of cash flows and may not be consistent with similarly titled measures used by other companies. A reconciliation of free operating cash flows to net cash provided by operating activities is included in the press release furnished as Exhibit 99.1.

The Company uses return on average invested capital (“ROIC”) to measure the effectiveness of its operations’ use of invested capital to generate profits. The Company believes that ROIC is a meaningful metric to investors in evaluating the Company’s financial performance and may be different than the method used by other companies to calculate ROIC. Invested capital represents the net assets of the Company, excluding cash and cash equivalents and outstanding debt, which are excluded as they do not represent capital investment in the Company’s operations. Average invested capital is calculated using balances at the start of the year and at the end of each quarter.
