Item 5. Other Events

AMR Corporation (AMR) is filing herewith a press release issued on August 13, 2002 by American Airlines, Inc. (American, a wholly owned subsidiary of AMR) as Exhibit 99.1 which is included herein. This press release was issued to announce the next series of short- and long-term initiatives to further position American for long-term competitiveness and profitability. These initiatives include a reduction in capacity by nine percent, retirement of 74 Fokker 100 aircraft, de-peaks of its Dallas-Fort Worth hub and other fleet changes.

AMERICAN UNVEILS NEXT SERIES OF FUNDAMENTAL BUSINESS CHANGES

- Reduces Capacity by 9 Percent, Retires 74 Fokker 100s,
- De-Peaks DFW Hub and Makes Other Fleet Changes

Edgar Filing: AMR CORP - Form 8-K

FORT WORTH, Texas -- American Airlines today unveiled the latest in a series of short- and long-term initiatives intended to further position American for long-term competitiveness and profitability.

"We grasped the need for fundamental change in the airline industry some time ago, and have undertaken both long-term structural change and measures responsive to current industry conditions. This latest round of initiatives is yet another step toward more solidly positioning American for success in the long term," said Chairman and CEO Donald J. Carty.

"We believe our future lies in continuing to operate as the world's leading network carrier - but we must get our costs down in order to compete and must focus on the products our customers want and are willing to pay for. Our decisions going forward will be framed around those objectives and geared toward positioning American to succeed and be profitable," Carty said.

In the past 18 months, American has implemented a number of changes:

- de-peak-ing its Chicago hub,
 - simplifying its fleet,
 - launching several automation initiatives that improve customer service and enhance productivity,
 - changing distribution methods,
 - modifying its in-flight product, and
 - initiating a broad range of cost savings programs.

The initiatives announced today will increase scheduling efficiencies at American's largest hub at Dallas/Fort Worth, further simplify its fleet and sharply adjust capacity for the fall and winter.

"These are a combination of fundamental structural changes and tactical moves to re-position and re-size the airline in light of a continued sluggish economy and changes in consumer flying behaviors," Carty said. "We view change as an ongoing process at American as we continue to evaluate every aspect of our business."

The initiatives being announced today include:

- American will expand its successful April 2002 Chicago hub "de-peak-ing" to its largest hub at Dallas/Fort Worth beginning Nov. 1 to allow the airline to utilize people, gates and aircraft more productively - and to give customers better flight options. Since aircraft will be flying into and out of the hub on a more continuous schedule, with flights spread out more evenly throughout the day, spoke cities also will see increased efficiency and productivity as a result of the DFW and Chicago hub de-peak-ing initiatives.

"Our Chicago experience has improved customer service, reduced costs, improved productivity and allowed us to fly the same schedule with the equivalent of five fewer aircraft and four fewer gates," Carty said. "We expect the DFW and spoke de-peak to allow us to fly an equivalent schedule with 11 fewer aircraft, with an as-yet-undetermined number of gates saved as well."

- American will retire its 74-jet Fokker 100 fleet - furthering the fleet simplification efforts that had previously cut

Edgar Filing: AMR CORP - Form 8-K

fleet types from 14 to seven. The first F-100 will leave the fleet in the third quarter of 2003 and the last plane will retire by the third quarter of 2005.

While regular maintenance will continue unabated, consistent with AA's high standards and FAA and manufacturer procedures, each Fokker aircraft will be retired before its next scheduled major overhaul, resulting in major cost savings. Further, since the F-100 is not common with other aircraft types, crew-training savings will be very significant.

"The Fokker is a small plane with very high operating costs, complicated by the manufacturer's bankruptcy. Its economics simply no longer work for us," Carty said.

- American will standardize, reconfigure and consolidate a number of its fleet types to realize greater scheduling efficiencies, increase utilization and enhance its product in international markets.

- With a total of 43 Boeing 777s now in its fleet, American will concentrate this three-class premium aircraft to serve its primary business markets in Europe, deep South America and Asia. The company will standardize and reconfigure its fleet of 49 Boeing 767-300s to serve other markets in continental Europe, Latin America and Hawaii. The reconfigured aircraft will feature 30 business-class seats with 60-inch pitch, as well as 182 More Room Throughout Coach seats. A common 767-300 fleet will save the equivalent of two aircraft because of routing efficiencies.

- In order to achieve greater scheduling efficiency from the 777 fleet, the company will move to one standard configuration, rather than operating separate configurations across the Atlantic and Pacific. The 777s will continue to offer three-class service on all routings - with fully flat first class, 60-inch business class and More Room Throughout Coach seating. Carty said eliminating separate fleet types for the 777 increases its utilization by an equivalent of two aircraft.

"With these changes, we will actually be providing a superior product in our international markets, which will be served either with the three-class 777s or with an expanded business class on the 767-300s," Carty said. "As a result, we will have a more efficient mix of aircraft ideally suited for a large, international network carrier."

- In addition to reducing the number of fleets and sub-fleets, American has deferred 35 aircraft deliveries in 2002 and will seek every opportunity to defer or cancel new deliveries going forward.

- Given recent economic and consumer confidence reports, American will reduce capacity by 9 percent by November, versus summer 2002.

Page 4

- As part of the capacity reduction, American will accelerate the retirement of its nine TWA 767-300 aircraft to November 2002.

"While some of these reductions and changes are seasonal, this more broadly represents a re-sizing of the airline to draw down some of the excess capacity we see in the marketplace," Carty said. "American will remain the world's largest network carrier, even after these changes, but we believe fundamental, ongoing change is necessary for the company to return to profitability and achieve long-term success."

- American will reduce, between now and March 2003, an estimated 7,000 jobs in order to realign its workforce with the planned fall capacity reductions, fleet simplification and hub restructurings.

Once the October and November schedules are in place, the company will be communicating specific job reduction impacts internally to the affected workgroups and locations.

"As the company goes through fundamental and structural change, one unpleasant reality, as we have said many times, is that we simply will need fewer people to operate the airline. We've also said many times that we will be guided during these times by a principle and commitment to do what we can to take care of our people who are impacted. Fortunately, in addition to a new age-60 retirement plan, we have been able to fashion a number of options, including selective voluntary programs, a variety of leaves, part-time, and stand-in-stead programs to minimize the impact on our people," Carty said.

Once fully implemented, the initiatives announced today - coupled with those already implemented - will result in structural annual operating savings of more than \$1.1 billion, independent of capacity reductions.

"And, as I've said many times, we're going to see even greater savings as a host of cost-saving suggestions from employees, automation programs and additional structural and process changes currently under review get implemented," Carty said.

In addition, the aircraft utilization efficiencies that result from the de-peak and fleet actions announced today create the equivalent of 17 "new" aircraft, which save the company more than \$1.3 billion of capital spending in the future. The company already has cut or deferred an additional \$5 billion in capital spending since early 2001.

Carty said these initiatives also bolster American's substantial liquidity. The company ended the second quarter with \$2.6 billion in cash and significant untapped financing capacity, including approximately \$6 billion in unencumbered aircraft and several billion dollars in available non-aircraft assets. In July, American completed a \$500 million tax-exempt financing at JFK, further bolstering its cash balances.

"We were pleased with our JFK financing, which was larger than expected," Carty said. "We were able to place bonds with a 26-year

Edgar Filing: AMR CORP - Form 8-K

final maturity at less than 9 percent in a very difficult market."

This transaction followed a number of other financings American has completed in the period since September 2001, including a \$1.9 billion public secured financing, a \$300 million tax-exempt funding and several bank facilities.

"This breadth of financing demonstrates that the public and private markets are open to us for a variety of different transactions, which is important as we continue to make the business changes that we see as crucial to our future success and industry leadership," Carty said.

Note: AMR's CFO, Jeffrey Campbell, will be conducting a conference call with select members of the financial community this morning at 10 am CDT to discuss today's announcement. The call will be webcast live and will also be available for replay. To access the Webcast, please visit the Investor Information page at www.amrcorp.com.
