MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION
AND RESULTS OF OPERATIONS

GENERAL

State Street Corporation, or the parent company, is a financial holding company headquartered in Boston, Massachusetts. Unless otherwise indicated or unless the context requires otherwise, all references in this Management's Discussion and Analysis to "State Street," "we," "us," "our" or similar terms mean State Street Corporation and its subsidiaries on a consolidated basis. Our principal banking subsidiary is State Street Bank and Trust Company, or State Street Bank. As of March 31, 2013, we had consolidated total assets of \$218.19 billion, consolidated total deposits of \$154.78 billion, consolidated total shareholders' equity of \$20.87 billion and 29,500 employees. With \$25.42 trillion of assets under custody and administration and \$2.18 trillion of assets under management as of March 31, 2013, we are a leading specialist in meeting the needs of institutional investors worldwide.

We have two lines of business:

Investment Servicing provides services for mutual funds, collective investment funds and other investment pools, corporate and public retirement plans, insurance companies, foundations and endowments worldwide. Products include custody, product- and participant-level accounting, daily pricing and administration; master trust and master custody; record-keeping; foreign exchange, brokerage and other trading services; securities finance; deposit and short-term investment facilities; loans and lease financing; investment manager and alternative investment manager operations outsourcing; and performance, risk and compliance analytics to support institutional investors.

Investment Management, through State Street Global Advisors, or SSgA, provides a broad range of investment management strategies, specialized investment management advisory services and other financial services, such as securities finance, for corporations, public funds, and other sophisticated investors. Management strategies offered by SSgA include passive and active, such as enhanced indexing, using quantitative and fundamental methods for both U.S. and non-U.S. equity and fixed-income securities. SSgA also offers exchange-traded funds, or ETFs.

For financial and other information about our lines of business, refer to "Line of Business Information" included in this Management's Discussion and Analysis and in note 15 to the consolidated financial statements included in this Form 10-Q.

This Management's Discussion and Analysis is part of our Quarterly Report on Form 10-Q for the quarter ended March 31, 2013, and updates the Management's Discussion and Analysis in our Annual Report on Form 10-K for the year ended December 31, 2012, referred to as our 2012 Form 10-K, which we previously filed with the SEC. You should read the financial information contained in this Management's Discussion and Analysis and elsewhere in this Form 10-Q in conjunction with the financial and other information contained in those reports. Certain previously reported amounts presented in this Form 10-Q have been reclassified to conform to current-period presentation. We prepare our consolidated financial statements in conformity with accounting principles generally accepted in the U.S., referred to as GAAP. The preparation of financial statements in conformity with GAAP requires management to make estimates and assumptions in its application of certain accounting policies that materially affect the reported amounts of assets, liabilities, equity, revenue and expenses.

The significant accounting policies that require us to make estimates and assumptions that are difficult, subjective or complex about matters that are uncertain and may change in subsequent periods are accounting for fair value measurements; other-than-temporary impairment of investment securities; and impairment of goodwill and other intangible assets. These significant accounting policies require the most subjective or complex judgments, and underlying estimates and assumptions could be subject to revision as new information becomes available. An understanding of the judgments, estimates and assumptions underlying these significant accounting policies is essential in order to understand our reported consolidated results of operations and financial condition.

Additional information about these significant accounting policies is included under "Significant Accounting Estimates" in Management's Discussion and Analysis in our 2012 Form 10-K. We did not change these significant accounting policies during the first quarter of 2013.

Certain financial information presented in this Management's Discussion and Analysis is prepared on both a GAAP, or reported basis, and a non-GAAP, or operating basis. We measure and compare certain financial information on an operating basis, as we believe that this presentation supports meaningful comparisons from period to period and the analysis of comparable financial trends with respect to State Street's normal ongoing business operations. We believe that operating-basis financial information, which reports non-taxable revenue, such as interest revenue associated with tax-exempt investment securities, on a fully taxable-equivalent basis and excludes the impact of revenue and expenses outside of the normal course of our business, facilitates an investor's understanding and analysis of State Street's underlying financial performance and trends in addition to financial information prepared and reported in conformity with GAAP. Operating-basis financial information

Table of Contents

MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION
AND RESULTS OF OPERATIONS (Continued)

should be considered in addition to, not as a substitute for or superior to, financial information prepared in conformity with GAAP. Any non-GAAP, or operating-basis, financial information presented in this Management's Discussion and Analysis is reconciled to its most directly comparable GAAP-basis measure.

FORWARD-LOOKING STATEMENTS

This Form 10-Q, as well as other reports submitted by us under the Securities Exchange Act of 1934, registration statements filed by us under the Securities Act of 1933, our annual report to shareholders and other public statements we may make, contain statements (including statements in this Management's Discussion and Analysis) that are considered "forward-looking statements" within the meaning of U.S. securities laws, including statements about industry, regulatory, economic and market trends, management's expectations about our financial performance, capital, market growth, acquisitions, joint ventures and divestitures, new technologies, services and opportunities and earnings, management's confidence in our strategies and other matters that do not relate strictly to historical facts. Terminology such as "plan," "expect," "intend," "forecast," "look," "believe," "anticipate," "estimate," "seek," "may," "will," and "goal," or similar statements or variations of such terms, are intended to identify forward-looking statements, although not all forward-looking statements contain such terms.

Forward-looking statements are subject to various risks and uncertainties, which change over time, are based on management's expectations and assumptions at the time the statements are made, and are not guarantees of future results. Management's expectations and assumptions, and the continued validity of the forward-looking statements, are subject to change due to a broad range of factors affecting the national and global economies, the equity, debt, currency and other financial markets, as well as factors specific to State Street and its subsidiaries, including State Street Bank. Factors that could cause changes in the expectations or assumptions on which forward-looking statements are based cannot be foreseen with certainty and include, but are not limited to:

- the financial strength and continuing viability of the counterparties with which we or our clients do business and to which we have investment, credit or financial exposure, including, for example, the direct and indirect effects on counterparties of the current sovereign-debt risks in Europe and other regions;
- financial market disruptions or economic recession, whether in the U.S., Europe, Asia or other regions;
- increases in the volatility of, or declines in the level of, our net interest revenue, changes in the composition of the assets recorded in our consolidated statement of condition (and our ability to measure the fair value of investment securities) and the possibility that we may change the manner in which we fund those assets;
- the liquidity of the U.S. and international securities markets, particularly the markets for fixed-income securities and inter-bank credits, and the liquidity requirements of our clients;
- the level and volatility of interest rates and the performance and volatility of securities, credit, currency and other markets in the U.S. and internationally;
- the credit quality, credit-agency ratings and fair values of the securities in our investment securities portfolio, a deterioration or downgrade of which could lead to other-than-temporary impairment of the respective securities and the recognition of an impairment loss in our consolidated statement of income;
- our ability to attract deposits and other low-cost, short-term funding, and our ability to deploy deposits in a profitable manner consistent with our liquidity requirements and risk profile;
- the manner and timing with which the Federal Reserve and other U.S. and foreign regulators implement the Dodd-Frank Act, the Basel II and Basel III capital and liquidity standards, and European legislation with respect to the levels of regulatory capital we must maintain, our credit exposure to third parties, margin requirements applicable to derivatives, banking and financial activities and other regulatory initiatives in the U.S. and internationally, including regulatory developments that result in changes to our structure or operating model, increased costs or other changes to how we provide services;
- adverse changes in the regulatory capital ratios that we are required to meet, whether arising under the Dodd-Frank Act, the Basel II or Basel III capital and liquidity standards or due to changes in regulatory positions, practices or regulations in jurisdictions in which we engage in banking activities, including changes

in internal or external data, formulae, models, assumptions or other advanced systems used in calculating our capital ratios that cause changes in those ratios as they are measured from period to period; increasing requirements to obtain the prior approval of the Federal Reserve or our other regulators for the use, allocation or distribution of our capital or other specific capital actions or programs, including acquisitions, dividends and equity purchases, without which our growth plans, distributions to shareholders, equity purchase

Table of Contents

MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION
AND RESULTS OF OPERATIONS (Continued)

programs or other capital initiatives may be restricted;

changes in law or regulation that may adversely affect our business activities or those of our clients or our counterparties, and the products or services that we sell, including additional or increased taxes or assessments thereon, capital adequacy requirements, margin requirements and changes that expose us to risks related to the adequacy of our controls or compliance programs;

our ability to promote a strong culture of risk management, operating controls, compliance oversight and governance that meet our expectations or those of our clients and our regulators;

the credit agency ratings of our debt and depository obligations and investor and client perceptions of our financial strength;

delays or difficulties in the execution of our previously announced Business Operations and Information Technology Transformation program, which could lead to changes in our estimates of the charges, expenses or savings associated with the planned program and may cause volatility of our earnings;

the results of, and costs associated with, government investigations, litigation, and similar claims, disputes, or proceedings;

the possibility that our clients will incur substantial losses in investment pools for which we act as agent, and the possibility of significant reductions in the valuation of assets underlying those pools;

adverse publicity or other reputational harm;

dependencies on information technology, complexities and costs of protecting the security of our systems and difficulties with protecting our intellectual property rights;

our ability to grow revenue, control expenses, attract and retain highly skilled people and raise the capital necessary to achieve our business goals and comply with regulatory requirements;

potential changes to the competitive environment, including changes due to regulatory and technological changes, the effects of industry consolidation, and perceptions of State Street as a suitable service provider or counterparty;

potential changes in how and in what amounts clients compensate us for our services, and the mix of services provided by us that clients choose;

the ability to complete acquisitions, joint ventures and divestitures, including the ability to obtain regulatory approvals, the ability to arrange financing as required and the ability to satisfy closing conditions;

the risks that acquired businesses and joint ventures will not achieve their anticipated financial and operational benefits or will not be integrated successfully, or that the integration will take longer than anticipated, that expected synergies will not be achieved or unexpected dis synergies will be experienced, that client and deposit retention goals will not be met, that other regulatory or operational challenges will be experienced and that disruptions from the transaction will harm our relationships with our clients, our employees or regulators;

our ability to recognize emerging needs of our clients and to develop products that are responsive to such trends and profitable to us, the performance of and demand for the products and services we offer, and the potential for new products and services to impose additional costs on us and expose us to increased operational risk;

our ability to anticipate and manage the level and timing of redemptions and withdrawals from our collateral pools and other collective investment products;

our ability to control operating risks, data security breach risks, information technology systems risks and outsourcing risks, and our ability to protect our intellectual property rights, the possibility of errors in the quantitative models we use to manage our business and the possibility that our controls will prove insufficient, fail or be circumvented;

changes in accounting standards and practices; and

changes in tax legislation and in the interpretation of existing tax laws by U.S. and non-U.S. tax authorities that affect the amount of taxes due.

Actual outcomes and results may differ materially from what is expressed in our forward-looking statements and from our historical financial results due to the factors discussed in this section and elsewhere in this Form 10-Q or disclosed in our other SEC filings, including the risk factors discussed in our 2012 Form 10-K. Forward-looking statements should not be relied on as representing our expectations or beliefs as of any date subsequent to the time this Form

10-Q is filed with the SEC. We undertake no obligation to revise our forward-looking statements after the time they are made. The factors discussed above are not intended to be a complete statement of all risks and uncertainties that may affect our businesses. We cannot anticipate all

Table of ContentsMANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION
AND RESULTS OF OPERATIONS (Continued)

developments that may adversely affect our consolidated results of operations and financial condition. Forward-looking statements should not be viewed as predictions, and should not be the primary basis on which investors evaluate State Street. Any investor in State Street should consider all risks and uncertainties disclosed in our SEC filings, including our filings under the Securities Exchange Act of 1934, in particular our reports on Forms 10-K, 10-Q and 8-K, or registration statements filed under the Securities Act of 1933, all of which are accessible on the SEC's website at www.sec.gov or on our website at www.statestreet.com.

Table of Contents

MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION
AND RESULTS OF OPERATIONS (Continued)

The following "Highlights" and "Financial Results" sections provide information related to significant first-quarter 2013 events, as well as highlights of our consolidated financial results for the first quarter of 2013 presented in the preceding table. More detailed information about our consolidated financial results, including comparisons of our results for the first quarter of 2013 to those for the first quarter of 2012, is provided under "Consolidated Results of Operations," which follows these sections.

Highlights

In March 2013, we received the results of the Federal Reserve's review of our 2013 capital plan in connection with its comprehensive capital analysis and review, or CCAR, process. The Federal Reserve did not object to the capital actions we proposed, and as we previously announced, in March 2013, our Board of Directors approved a new common stock purchase program authorizing the purchase of up to \$2.10 billion of our common stock through March 31, 2014. This new program follows the \$1.80 billion program authorized by the Board of Directors in March 2012 and fully executed from April 2012 through February 2013.

We did not purchase any of our common stock under the new program in the first quarter of 2013. We completed the March 2012 program by purchasing approximately 6.5 million shares of our common stock, at an average cost of \$54.95 per share and an aggregate cost of approximately \$360 million, in the first quarter of 2013. We also declared a quarterly common stock dividend of \$0.26 per share, or approximately \$118 million in the aggregate, in February 2013, which was paid in April 2013. This dividend compares to a quarterly common stock dividend of \$0.24 per share, or approximately \$118 million in the aggregate, declared in the first quarter of 2012 and paid in April 2012. Additional information about our common stock purchase program and our common stock dividends is provided under "Financial Condition – Capital" in this Management's Discussion and Analysis.

With respect to our Business Operations and Information Technology Transformation program, in 2011 and 2012 combined, we achieved approximately \$198 million of cumulative pre-tax expense savings compared to our 2010 expenses from operations, all else being equal. In 2013, we expect to achieve additional pre-tax expense savings of approximately \$220 million compared to our above-described 2010 expense base, all else being equal. These pre-tax expense savings relate only to the Business Operations and Information Technology Transformation program and are based on projected improvement from our total 2010 expenses from operations. Our actual total expenses have increased since 2010, and may in the future increase or decrease, due to other factors. Additional information about our Business Operations and Information Technology Transformation program is provided under "Consolidated Results of Operations – Expenses" in this Management's Discussion and Analysis.

Financial Results

Total revenue in the first quarter of 2013 increased 1% compared to the first quarter of 2012, as a combined 9% increase in aggregate servicing fee and management fee revenue was substantially offset by declines in net interest revenue, processing fees and other revenue and securities finance revenue.

Servicing fee revenue in the first quarter of 2013 increased 9% compared to the first quarter of 2012, mainly the result of stronger global equity markets, net new business installed and revenue from the Goldman Sachs Administration Services, or GSAS, business, acquired in October 2012. In the first quarter of 2013 and the first quarter of 2012, servicing fees generated outside the U.S. were approximately 41% and 42%, respectively, of total servicing fees for those periods. Management fee revenue increased 11% in the same comparison, primarily the result of stronger equity markets and net new business. Management fees generated outside the U.S. in both the first quarter of 2013 and the first quarter of 2012 were approximately 37% of total management fees for those periods.

In the first quarter of 2013, trading services revenue was flat compared to the first quarter of 2012. In the same comparison, foreign exchange trading revenue was down 2%, as declines in currency volatility and spreads were partly offset by higher client volumes. This revenue was also affected by changes in mix between direct sales and trading foreign exchange and indirect foreign exchange. Our estimated indirect foreign exchange revenue declined 13%, mainly the result of lower volatility and spreads, while direct sales and trading foreign exchange revenue

increased 9%, mainly the result of higher client volumes, partly offset by lower volatility and spreads. With respect to brokerage and other trading services revenue, our revenue from electronic foreign exchange trading platforms increased 16%, primarily the result of a 34% increase in client volumes. Securities finance revenue in the first quarter of 2013 declined 20% compared to the first quarter of 2012, as a result of lower spreads and lower average lending volumes.

Net interest revenue in the first quarter of 2013 declined 8% compared to the first quarter of 2012, generally the result of lower yields on earning assets related to lower global market rates and repricing on floating-rate investment securities, partly offset by lower funding costs. Yields on the investment portfolio were also affected by the reinvestment of pay-downs and

Table of Contents

MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION
AND RESULTS OF OPERATIONS (Continued)

other runoff into lower-yielding securities. Net interest revenue in the first quarter of 2013 and the first quarter of 2012 included \$31 million and \$49 million, respectively, of discount accretion related to investment securities added to our consolidated statement of condition in connection with the 2009 consolidation of our asset-backed commercial paper conduits.

Net interest margin, calculated on fully taxable-equivalent net interest revenue, declined 26 basis points to 1.38% in the first quarter of 2013 from 1.64% in the first quarter of 2012. Higher levels of client deposits, amid continued market uncertainty, increased our average interest-earning assets, but negatively affected our net interest margin, as we generally placed certain of such deposits with central banks and earned the relatively low interest rates paid by the central banks on these balances. Discount accretion, fully taxable-equivalent net interest revenue and net interest margin are discussed in more detail under "Consolidated Results of Operations - Net Interest Revenue" in this Management's Discussion and Analysis.

Total expenses in the first quarter of 2013 were flat compared to the first quarter of 2012. Compensation and employee benefits expenses declined in the same comparison, partly due to the impact of savings associated with the Business Operations and Information Technology Transformation program. This decline was offset by an increase in information systems and communications expenses, which resulted primarily from the transition of activities to third-party service providers associated with components of our technology infrastructure and application maintenance and support, as we continued to implement the Business Operations and Information Technology Transformation program. Additional information with respect to our expenses is provided under "Consolidated Results of Operations - Expenses" in this Management's Discussion and Analysis.

During the first quarter of 2013, we secured mandates for approximately \$223 billion of new business in assets to be serviced; of the total, \$180 billion was installed prior to March 31, 2013, with the remaining \$43 billion expected to be installed in later periods. The new business not installed by March 31, 2013 was not included in assets under custody and administration as of that date, and had no impact on servicing fee revenue in the first quarter of 2013, as the assets are not included until their installation is complete and we begin to service them. In addition, we installed approximately \$479 billion of new business in assets to be serviced in the first quarter that we were awarded prior to January 1, 2013. We will provide one or more various services for these new assets to be serviced, including accounting, fund administration, bank loan services, custody, securities finance, compliance reporting and monitoring, hedge fund servicing, private equity administration, real estate administration, depository banking services, wealth management services, and investment manager and alternative investment manager operations outsourcing.

In the first quarter of 2013, SSgA added approximately \$5 billion of net new business in assets to be managed, generally composed of approximately \$16 billion of net inflows into managed cash and approximately \$3 billion of net inflows into active and enhanced equity funds, partly offset by approximately \$8 billion of net outflows from fixed-income funds and approximately \$6 billion of net outflows from ETFs.

An additional \$34 billion of new business awarded to SSgA but not installed by March 31, 2013 was not included in assets under management as of that date, and had no impact on management fee revenue for the first quarter of 2013, as the assets are not included until their installation is complete and we begin to manage them. Once installed, the assets generate management fee revenue in subsequent periods in which the assets are managed.

CONSOLIDATED RESULTS OF OPERATIONS

This section discusses our consolidated results of operations for the first quarter of 2013 compared to the first quarter of 2012, and should be read in conjunction with the consolidated financial statements and accompanying condensed notes included in this Form 10-Q.

Table of ContentsMANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION
AND RESULTS OF OPERATIONS (Continued)

TOTAL REVENUE

Additional information with respect to the sources of our revenue, the products and activities that generate it, and the factors that influence the levels of revenue generated during any period is provided under "Consolidated Results of Operations – Total Revenue" in Management's Discussion and Analysis included in our 2012 Form 10-K.

(Dollars in millions)	Quarters Ended March 31,			
	2013	2012	% Change	
Fee revenue:

Processing fees and other	60	94	(36))
Total fee revenue	1,857	1,785	4	
Net interest revenue:				
Interest revenue	687	765	(10))
Interest expense	111	140	(21))
Net interest revenue	576	625	(8))
Gains related to investment securities, net	2	11		
Total revenue	\$2,435	\$2,421	1	

Fee Revenue

Servicing and management fees collectively composed approximately 77% of our total fee revenue in the first quarter of 2013, compared to 74% in the first quarter of 2012. The level of these fees is influenced by several factors, including the mix and volume of assets under custody and administration and assets under management, securities positions held and the volume of portfolio transactions, and the types of products and services used by clients, and is generally affected by changes in worldwide equity and fixed-income security valuations.

Generally, servicing fees are affected, in part, by changes in daily average valuations of assets under custody and administration. Additional factors, such as the relative mix of assets serviced, the level of transaction volumes, changes in service level, the nature of services provided, balance credits, client minimum balances, pricing concessions and other factors, may have a significant effect on our servicing fee revenue.

Generally, management fees are affected, in part, by changes in month-end valuations of assets under management. Management fee revenue is relatively more sensitive to market valuations than servicing fee revenue, since a higher proportion of the underlying services provided, and the associated management fees earned, are dependent on equity and fixed-income values. Additional factors, such as the relative mix of assets managed, changes in service level and other factors, may have a significant effect on our management fee revenue. While certain management fees are directly determined by the value of assets under management and the investment strategy employed, management fees reflect other factors as well, including our relationship pricing for clients using multiple services.

Management fees for actively managed products are generally earned at higher rates than those for passive products. Actively managed products may also involve performance fee arrangements. Performance fees are generated when the performance of certain managed funds exceeds benchmarks specified in the management agreements. Generally, we experience more volatility with performance fees than with more traditional management fees.

In light of the above, we estimate, assuming all other factors remain constant, that a 10% increase or decrease in worldwide equity valuations would result in a corresponding change in our total revenue of approximately 2%. If fixed-income security valuations were to increase or decrease by 10%, we would anticipate a corresponding change of approximately 1% in our total revenue.

The following table presents selected average and quarter-end equity market indices. Daily averages and the averages of month-end indices demonstrate worldwide changes in equity markets that affect our servicing and management fee revenue,

10

Table of ContentsMANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION
AND RESULTS OF OPERATIONS (Continued)

respectively. Quarter-end indices affect the value of assets under custody and administration and assets under management as of those dates. The index names listed in the table are service marks of their respective owners.
INDEX

	Daily Averages of Indices			Averages of Month-End Indices			Quarter-End Indices		
	Quarters Ended March 31,			Quarters Ended March 31,			As of March 31,		
	2013	2012	% Change	2013	2012	% Change	2013	2012	% Change
S&P 500®	1,514	1,349	12 %	1,527	1,362	12 %	1,569	1,408	11 %
NASDAQ®	3,176	2,907	9	3,190	2,957	8	3,268	3,092	6
MSCI EAFE®	1,668	1,516	10	1,676	1,536	9	1,674	1,553	8

Servicing Fees

Servicing fees in the first quarter of 2013 increased 9% compared to the first quarter of 2012, primarily as a result of stronger global equity markets, the impact of net new business installed on current-period revenue, and the addition of revenue from the GSAS business, acquired in October 2012. The combined daily averages of equity market indices, individually presented in the foregoing "INDEX" table, increased an average of approximately 10% in the first quarter of 2013 compared to the first quarter of 2012. In the first quarter of 2013 and the first quarter of 2012, servicing fees generated outside the U.S. were approximately 41% and 42%, respectively, of total servicing fees.

The following tables present the components, financial instrument mix and geographic mix of assets under custody and administration as of the dates indicated:

ASSETS UNDER CUSTODY AND ADMINISTRATION

(In billions)	March 31, 2013	December 31, 2012	March 31, 2012
Mutual funds	\$6,275	\$ 5,852	\$5,681
Collective funds	5,753	5,363	4,792
Pension products	5,331	5,339	5,116
Insurance and other products	8,063	7,817	7,619
Total	\$25,422	\$ 24,371	\$23,208

FINANCIAL INSTRUMENT MIX OF ASSETS UNDER CUSTODY AND ADMINISTRATION

(In billions)	March 31, 2013	December 31, 2012	March 31, 2012
Equities	\$13,095	\$ 12,276	\$12,004
Fixed-income	9,069	8,885	8,384
Short-term and other investments	3,258	3,210	2,820
Total	\$25,422	\$ 24,371	\$23,208

GEOGRAPHIC MIX OF ASSETS UNDER CUSTODY AND ADMINISTRATION⁽¹⁾

(In billions)	March 31, 2013	December 31, 2012	March 31, 2012
United States	\$18,477	\$ 17,711	\$16,757
Other Americas	757	752	673
Europe/Middle East/Africa	5,060	4,801	4,659
Asia/Pacific	1,128	1,107	1,119
Total	\$25,422	\$ 24,371	\$23,208

⁽¹⁾ Geographic mix is based on the location at which the assets are serviced.

The increase in total servicing assets from December 31, 2012 to March 31, 2013 primarily resulted from increases in global equity markets and net client subscriptions. The increase in total servicing assets from March 31, 2012 to March 31, 2013 primarily resulted from increases in global equity markets, net client subscriptions and net new servicing business

Table of ContentsMANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION
AND RESULTS OF OPERATIONS (Continued)

installations. Servicing asset levels as of March 31, 2013 did not reflect the \$43 billion of new business in assets to be serviced awarded to us in first quarter of 2013 but not installed prior to March 31, 2013. The value of assets under custody and administration is a broad measure of the relative size of various markets served. Changes in the values of assets under custody and administration from period to period do not necessarily result in proportional changes in our servicing fee revenue.

Management Fees

Management fees in the first quarter of 2013 increased 11% compared to the first quarter of 2012, primarily the result of stronger equity market valuations and the impact of net new business installed on current-period revenue. Combined average month-end equity market indices, individually presented in the foregoing "INDEX" table, increased an average of approximately 9% in the first quarter of 2013 compared to the first quarter of 2012. For both the first quarter of 2013 and the first quarter of 2012, management fees generated outside the U.S. were approximately 37% of total management fees for those periods.

The following tables present the components and geographic mix of assets under management as of the dates indicated:

ASSETS UNDER MANAGEMENT

(In billions)	March 31, 2013	December 31, 2012	March 31, 2012
Passive:			
Equities	\$813	\$755	\$725
Fixed-income	289	292	220
Exchange-traded funds ⁽¹⁾	354	337	308
Other ⁽²⁾	221	211	203
Total passive	1,677	1,595	1,456
Active:			
Equities	53	52	56
Fixed-income	17	17	19
Other	49	55	54
Total active	119	124	129
Cash	380	367	395
Total	\$2,176	\$2,086	\$1,980

⁽¹⁾ Includes SPDR® Gold Fund, for which State Street is not the investment manager, but acts as distribution agent.

⁽²⁾ Includes currency, alternatives, assets passed to sub-advisors and multi-asset class solutions.

GEOGRAPHIC MIX OF ASSETS UNDER MANAGEMENT⁽¹⁾

(In billions)	March 31, 2013	December 31, 2012	March 31, 2012
United States	\$1,477	\$1,394	\$1,367
Other Americas	41	39	34
Europe/Middle East/Africa	357	351	349
Asia/Pacific	301	302	230
Total	\$2,176	\$2,086	\$1,980

⁽¹⁾ Geographic mix is based on the location at which the assets are managed.

The increase in total assets under management as of March 31, 2013 compared to December 31, 2012 resulted from net market appreciation during the quarter in the values of the assets managed, as well as net new business of \$5

billion. The net new business of \$5 billion was generally composed of approximately \$16 billion of net inflows into managed cash and approximately \$3 billion of net inflows into equity funds, partly offset by approximately \$8 billion of net outflows from fixed-income funds and approximately \$6 billion of net outflows from ETFs.

Table of ContentsMANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION
AND RESULTS OF OPERATIONS (Continued)

The following table presents activity in assets under management for the twelve months ended March 31, 2013:
ASSETS UNDER MANAGEMENT

(In billions)

March 31, 2012	\$1,980
Net new business	71
Market appreciation	35
December 31, 2012	2,086
Net new business	5
Market appreciation	85
March 31, 2013	\$2,176

The net new business of \$5 billion in the first quarter of 2013 presented in the table did not include \$34 billion of new business awarded to SSgA in the first quarter of 2013 but not installed prior to March 31, 2013. This new business will be reflected in assets under management in future periods after installation, and will generate management fee revenue in subsequent periods.

Trading Services

The following table summarizes the components of trading services revenue for the periods indicated:

(Dollars in millions)	Quarters Ended March 31,		
	2013	2012	% Change
Foreign exchange trading:			
Direct sales and trading	\$81	\$74	9 %
Indirect foreign exchange trading	65	75	(13)
Total foreign exchange trading	146	149	(2)
Brokerage and other trading services:			
Electronic foreign exchange trading	64	55	16
Other trading, transition management and brokerage	71	76	(7)
Total brokerage and other trading services	135	131	3
Total trading services revenue	\$281	\$280	—

Trading services revenue includes revenue from foreign exchange, or FX, trading, as well as revenue from brokerage and other trading services. We earn FX trading revenue by acting as a principal market maker. We offer a range of FX products, services and execution models. Most of our FX products and execution services can be grouped into three broad categories, which are further explained below: "direct sales and trading FX," "indirect FX" and "electronic FX trading." With respect to electronic FX trading, we provide an execution venue but do not act as agent or principal. We also offer a range of brokerage and other trading products tailored specifically to meet the needs of the global pension community, including transition management, commission recapture and self-directed brokerage. These products are differentiated by our position as an agent of the institutional investor. Revenue earned from these brokerage and other trading products is recorded in other trading, transition management and brokerage within brokerage and other trading services revenue.

FX trading revenue is influenced by three principal factors: the volume and type of client FX transactions; currency volatility; and the management of currency and rate market risks. Revenue earned from direct sales and trading FX and indirect FX is recorded in FX trading revenue. Revenue earned from electronic FX trading is recorded in brokerage and other trading services revenue.

The change in trading services revenue in the first quarter of 2013 compared to the first quarter of 2012, composed of separate changes related to FX trading and brokerage and other trading services, is explained below.

Total FX trading revenue declined 2% in the first quarter of 2013 compared to the first quarter of 2012, primarily the result of declines in currency volatility and spreads, partly offset by higher client volumes. This revenue was also affected by changes in mix between direct sales and trading FX and indirect FX. We enter into FX transactions with

clients and investment

13

Table of Contents

MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION
AND RESULTS OF OPERATIONS (Continued)

managers that contact our trading desk directly. These trades are all executed at negotiated rates. We refer to this activity, and our principal market-making activities, as "direct sales and trading FX." Alternatively, clients or their investment managers may elect to route FX transactions to our FX desk through our asset-servicing operation; we refer to this activity as "indirect FX." We execute indirect FX trades as a principal at rates disclosed to our clients. We calculate revenue for indirect FX using an attribution methodology based on estimated effective mark-ups/downs and observed client volumes.

For the quarters ended March 31, 2013 and 2012, our estimated indirect FX revenue was approximately \$65 million and \$75 million, respectively. The 13% decline was mainly the result of lower volatility and lower spreads. All other FX revenue, other than this indirect FX revenue estimate, is considered by us to be direct sales and trading FX revenue. For the quarter ended March 31, 2013 compared to the quarter ended March 31, 2012, our direct sales and trading FX revenue increased 9%, mainly the result of higher client volumes, partly offset by lower volatility and lower spreads.

During the first quarter of 2013, some of our clients who relied on our indirect model to execute their FX transactions transitioned to other methods to conduct their FX transactions. Through State Street Global Exchange, a unit of our Investment Servicing line of business, clients can transition to either direct sales and trading FX execution, including our "Street FX" service that enables our clients to define their FX execution strategy and automate the FX trade execution process, in which State Street continues to act as a principal market maker, or to one of our electronic trading platforms. The decline in indirect FX revenue in the first quarter of 2013 compared to the first quarter of 2012 was partly attributable to this shift. We continue to expect that some clients may choose, over time, to reduce their level of indirect FX transactions in favor of other execution methods, including either direct FX transactions or electronic FX trading, which we provide. To the extent that clients shift to other execution methods that we provide, our FX trading revenue may decrease, even if volumes remain consistent.

Total brokerage and other trading services revenue increased 3% in the first quarter of 2013 compared to the first quarter of 2012. Our clients may choose to execute FX transactions through one of our electronic trading platforms. This service generates revenue through a "click" fee. For the quarter ended March 31, 2013 compared to the quarter ended March 31, 2012, our revenue from electronic FX trading platforms increased 16%, primarily the result of a 34% increase in client volumes.

Securities Finance

Our agency securities finance business consists of two principal components: investment funds with a broad range of investment objectives which are managed by SSgA and engage in agency securities lending, which we refer to as the SSgA lending funds, and an agency lending program for third-party investment managers and asset owners, which we refer to as the agency lending funds.

We also participate in securities lending transactions as a principal. As principal, we borrow securities from the lending client and then lend such securities to the subsequent borrower, either a State Street client or a broker/dealer. Our involvement as principal is utilized when the lending client is unable to, or elects not to, transact directly with the market and requires us to execute the transaction and furnish the securities. In our role as principal, we provide support to the transaction through our credit rating, and we have the ability to source securities through our assets under custody and administration.

Securities finance revenue, composed of our split of both the spreads related to cash collateral and the fees related to non-cash collateral, is principally a function of the volume of securities on loan and the interest-rate spreads and fees earned on the underlying collateral. In the first quarter of 2013, securities finance revenue declined 20% compared to the first quarter of 2012, due to lower spreads and lower average lending volumes. Average spreads declined 16% in the first quarter of 2013 compared to the first quarter of 2012, and securities on loan averaged approximately \$313 billion in the first quarter of 2013 compared to approximately \$331 billion in the first quarter of 2012, a 5% decline. Market influences may continue to affect our revenue from, and the profitability of, our securities lending activities in future periods. In addition, proposed or anticipated regulatory changes may affect the volume of our securities lending activity and related revenue and profitability in future periods.

Processing Fees and Other

Processing fees and other revenue declined 36% in the first quarter of 2013 compared to the first quarter of 2012. The decline was mainly due to the positive fair-value adjustments of \$24 million recorded in the first quarter of 2012 related to our withdrawal from our fixed-income trading initiative.

NET INTEREST REVENUE

Net interest revenue is defined as total interest revenue earned on interest-earning assets less interest expense incurred on interest-bearing liabilities. Interest-earning assets, which principally consist of investment securities, interest-bearing deposits with banks, repurchase agreements, loans and leases and other liquid assets, are financed primarily by client deposits, short-term borrowings and long-term debt. Net interest margin represents the relationship between annualized fully taxable-

Table of ContentsMANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION
AND RESULTS OF OPERATIONS (Continued)

equivalent net interest revenue and average total interest-earning assets for the period. Revenue that is exempt from income taxes, mainly that earned from certain investment securities (state and political subdivisions), is adjusted to a fully taxable-equivalent basis using a federal statutory income tax rate of 35%, adjusted for applicable state income taxes, net of the related federal tax benefit.

The following table presents the components of average interest-earning assets and average interest-bearing liabilities, related interest revenue and interest expense, and rates earned and paid, for the periods indicated:

(Dollars in millions; fully taxable-equivalent basis)	Quarters Ended March 31,			2012					
	2013	Average Balance	Interest Revenue/Expense	Rate	Average Balance	Interest Revenue/Expense	Rate		
Interest-bearing deposits with banks	\$30,586	\$31	.41	%	\$25,561	\$42	.67	%	
Securities purchased under resale agreements	5,649	13	.95		7,485	9	.52		
Trading account assets	728	—	—		719	—	—		
Investment securities	119,601	618	2.07		109,740	689	2.51		
Loans and leases	12,737	56	1.77		10,762	55	2.08		
Other interest-earning assets	9,023	1	.06		6,937	1	.05		
Average total interest-earning assets	\$178,324	\$719	1.63		\$161,204	\$796	1.99		
Interest-bearing deposits:									
U.S.	\$13,398	\$6	.19	%	\$2,455	\$3	.40	%	
Non-U.S.	99,720	28	.11		87,029	50	.23		
Securities sold under repurchase agreements	7,839	—	—		7,439	—	—		
Federal funds purchased	363	—	—		808	—	—		
Other short-term borrowings	4,640	16	1.42		4,673	18	1.54		
Long-term debt	7,400	56	3.03		8,141	66	3.23		
Other interest-bearing liabilities	6,496	5	.31		6,855	3	.20		
Average total interest-bearing liabilities	\$139,856	\$111	.32		\$117,400	\$140	.48		
Interest-rate spread			1.31	%			1.51	%	
Net interest revenue—fully taxable-equivalent basis		\$608				\$656			
Net interest margin—fully taxable-equivalent basis			1.38	%			1.64	%	
Tax-equivalent adjustment		(32))			(31))		
Net interest revenue—GAAP basis		\$576				\$625			

In the first quarter of 2013 compared to the first quarter of 2012, average total interest-earning assets increased, mainly the result of the investment of higher levels of client deposits into interest-bearing deposits with banks, as well as purchases of investment securities. During the past year, our clients continued to place additional deposits with us amid market and public concerns related to various economic events. Those deposits determined to be transient in nature are placed with various central banks globally, whereas deposits determined to be more stable are invested in our securities portfolio or elsewhere to support growth in other client-related activities to monetize their value.

The increase in average U.S. interest-bearing deposits resulted primarily from the issuance of additional certificates of deposit in connection with our management of liquidity (refer to our discussion of liquidity management under "Financial Condition - Liquidity" in this Management's Discussion and Analysis). Although the placement of client deposits and proceeds from the issuance of certificates of deposit with various central banks increases our average interest-earning assets, it negatively affects our net interest margin, as placements generate only marginal, and in some cases zero percent, returns.

Average loans and leases were higher due to growth in lending to mutual fund clients. Higher levels of cash collateral provided in connection with our role as principal in certain securities finance activities drove other interest-earning

assets higher. While these activities support our overall profitability, they put downward pressure on our net interest margin.

Net interest revenue decreased 8% in the first quarter of 2013 compared to the first quarter of 2012. The decrease was primarily driven by the impacts of lower global market rates, which negatively affected the rates paid on funds held with non-U.S. central banks, and repricing on floating-rate investment securities. Yields on investment securities were also affected by higher levels of pay-downs and subsequent reinvestment in lower-yielding securities. The decrease in net interest revenue was

Table of ContentsMANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION
AND RESULTS OF OPERATIONS (Continued)

partly offset by the impacts of growth in the investment portfolio, lower funding costs, and higher levels of client deposits invested with the Federal Reserve, the European Central Bank, or ECB, and other non-U.S. central banks. Subsequent to the previously disclosed 2009 commercial paper conduit consolidation, we have recorded aggregate discount accretion in interest revenue of \$1.80 billion (\$621 million in 2009, \$712 million in 2010, \$220 million in 2011, \$215 million in 2012 and \$31 million in the first quarter of 2013). The timing and ultimate recognition of any applicable discount accretion depends, in part, on factors that are outside of our control, including anticipated prepayment speeds and credit quality. The impact of these factors is uncertain and can be significantly influenced by general economic and financial market conditions. The timing and recognition of any applicable discount accretion can also be influenced by our ongoing management of the risks and other characteristics associated with our investment securities portfolio, including sales of securities which would otherwise generate accretion.

Depending on the factors discussed above, among others, we anticipate that, until the former conduit securities remaining in our investment portfolio mature or are sold, discount accretion will continue to contribute to our net interest revenue. Assuming that we hold the remaining former conduit securities to maturity, all else being equal, we expect the remaining former conduit securities carried in our investment portfolio as of March 31, 2013 to generate aggregate discount accretion in future periods of approximately \$684 million over their remaining terms, with approximately half of this aggregate discount accretion to be recorded over the next four years.

Changes in the components of interest-earning assets and interest-bearing liabilities are discussed in more detail below. Additional detail about the components of interest revenue and interest expense is provided in note 12 to the consolidated financial statements included in this Form 10-Q.

Interest-bearing deposits with banks, which include cash balances maintained at the Federal Reserve, the ECB and other non-U.S. central banks to satisfy reserve requirements, averaged \$30.59 billion for the quarter ended March 31, 2013, compared to \$25.56 billion for the quarter ended March 31, 2012, reflecting the impact of the placement of higher levels of client deposits. Given the expiration of the Federal Deposit Insurance Corporation's, or FDIC's, Transaction Account Guarantee, or TAG, and the likelihood that the low-rate environment will persist, we expect to continue to invest client deposits in either money market assets, including central bank deposits, or in investment securities, depending on our assessment of the characteristics of the deposits.

Our average investment securities portfolio increased to \$119.60 billion for the quarter ended March 31, 2013 from \$109.74 billion for the quarter ended March 31, 2012. The increase was generally the result of ongoing purchases of securities, partly offset by maturities, sales and prepayments. Period-end portfolio balances are more significantly influenced by the timing of purchases, sales and runoff; as a result, average portfolio balances are a more effective indication of trends in portfolio activity. As of March 31, 2013, securities rated "AAA" and "AA" represented approximately 88% of our portfolio, consistent with such composition as of March 31, 2012.

Loans and leases averaged \$12.74 billion for the quarter ended March 31, 2013 compared to \$10.76 billion for the quarter ended March 31, 2012. This increase was mainly related to mutual fund lending, which grew to an average of \$8.11 billion for the quarter ended March 31, 2013 from an average of \$6.47 billion for the quarter ended March 31, 2012. Client demand for short-duration liquidity increased as well, but declined as a percentage of our average loan-and-lease portfolio to approximately 27% in the quarter ended March 31, 2013 from 29% in the quarter ended March 31, 2012. Short-duration advances provide liquidity to clients in support of their investment activities related to securities settlement.

The following table presents average U.S. and non-U.S. short-duration advances for the periods indicated:

(In millions)	Quarters Ended March 31,	
	2013	2012
Average U.S. short-duration advances	\$2,089	\$1,802
Average non-U.S. short-duration advances	1,401	1,267
Average total short-duration advances	\$3,490	\$3,069

In the first quarter of 2013 compared to the first quarter of 2012, average total short-duration advances increased but remained low relative to historical levels, mainly the result of clients continuing to hold higher levels of liquidity.

Average other interest-earning assets increased to \$9.02 billion in the first quarter of 2013 from \$6.94 billion in the first quarter of 2012, primarily the result of higher levels of cash collateral provided in connection with our role as principal in certain securities finance activities.

Aggregate average interest-bearing deposits increased to \$113.12 billion in the first quarter of 2013 from \$89.48 billion in the first quarter of 2012. This increase mainly reflected higher levels of certificates of deposit issued in connection with our management of liquidity (refer to our discussion of liquidity management under “Financial Condition - Liquidity” in this

Table of ContentsMANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION
AND RESULTS OF OPERATIONS (Continued)

Management's Discussion and Analysis). In addition, non-U.S. transaction accounts associated with new and existing business in assets under custody and administration continued to grow, although there has been a modest decline in non-interest bearing deposits as a result of the expiration of the FDIC's TAG. Future deposit levels will be influenced by anticipated growth in the underlying asset servicing business, as well as market conditions, including the general levels of U.S. and non-U.S. interest rates.

Average long-term debt decreased to \$7.40 billion in the first quarter of 2013 from \$8.14 billion in the first quarter of 2012. The decrease primarily reflected the maturities of \$250 million of senior notes and \$1.5 billion of senior notes in April 2012, the latter of which was previously issued by State Street Bank under the FDIC's Temporary Liquidity Guarantee Program. This decrease was partly offset by the issuance of \$1 billion of extendible notes by State Street Bank in December 2012.

Average other interest-bearing liabilities decreased to \$6.50 billion in the first quarter of 2013 from \$6.86 billion in the first quarter of 2012, primarily the result of lower levels of client cash collateral received in connection with our role as principal in certain securities finance activities.

Several factors could affect future levels of our net interest revenue and margin, including the mix of client liabilities; actions of the various central banks; changes in U.S. and non-U.S. interest rates; the various yield curves around the world; the amount of discount accretion generated by the former conduit securities that remain in our investment securities portfolio; and the yields earned on securities purchased compared to the yields earned on securities sold or matured.

Based on market conditions and other factors, we continue to re-invest the proceeds from pay-downs and maturities of securities in highly-rated investment securities, such as U.S. Treasuries and Agencies, federal agency mortgage-backed securities and U.S. and non-U.S. mortgage- and asset-backed securities. The pace at which we continue to re-invest and the types of securities purchased will depend on the impact of market conditions and other factors over time. We expect these factors and the levels of interest rates worldwide to dictate what effect our re-investment program will have on future levels of our net interest revenue and net interest margin.

Gains (Losses) Related to Investment Securities, Net

The following table presents net realized gains from sales of securities and the components of net impairment losses, included in net gains and losses related to investment securities, for the periods indicated:

(In millions)	Quarters Ended March 31,	
	2013	2012
Net realized gains from sales of available-for-sale securities	\$5	\$19
Losses from other-than-temporary impairment	—	(25)
Losses reclassified (from) to other comprehensive income	(3)) 17
Net impairment losses recognized in consolidated statement of income	(3)) (8)
Gains (losses) related to investment securities, net	\$2	\$11
Impairment associated with expected credit losses	\$—	\$(4)
Impairment associated with adverse changes in timing of expected future cash flows	(3)) (4)
Net impairment losses recognized in consolidated statement of income	\$(3)) \$(8)

From time to time, in connection with our ongoing management of our investment securities portfolio, we sell available-for-sale securities, to manage risk, to take advantage of favorable market conditions, or for other reasons. In the first quarter of 2013, we sold approximately \$2.75 billion of such investment securities, compared to approximately \$1.09 billion in the first quarter of 2012, and recorded net realized gains of \$5 million and \$19 million, respectively.

We regularly review our investment securities portfolio to identify other-than-temporary impairment of individual securities. Additional information about investment securities, the gross gains and losses that compose the net gains and losses from sales of securities and other-than-temporary impairment is provided in note 3 to the consolidated financial statements included in this Form 10-Q.

EXPENSES

The following table presents the components of expenses for the periods indicated:

(Dollars in millions)	Quarters Ended March 31,		
	2013	2012	% Change
Compensation and employee benefits	\$1,035	\$1,064	(3)%
Information systems and communications	237	191	24
Transaction processing services	180	181	(1)
Occupancy	116	119	(3)
Acquisition costs	15	13	
Restructuring charges, net	(1)	8	
Other:			
Professional services	79	81	(2)
Amortization of other intangible assets	53	51	4
Securities processing costs (recoveries)	5	(1)	
Regulator fees and assessments	15	15	
Other	92	113	(19)
Total other	244	259	(6)
Total expenses	\$1,826	\$1,835	—
Number of employees at period-end	29,500	29,800	

Expenses from Operations

Total expenses in the first quarter of 2013 were flat compared to the first quarter of 2012. Compensation and employee benefits expenses declined 3% in the same comparison, primarily as a result of lower employee levels and the related impact of savings associated with the Business Operations and Information Technology Transformation program. Compensation and employee benefits expenses in the first quarter of 2013 included approximately \$23 million of costs related to our continuing implementation of the Business Operations and Information Technology Transformation program, compared to approximately \$19 million of such costs in the first quarter of 2012. These costs are not expected to recur subsequent to full implementation of the program.

The increase in information systems and communications expenses in the first quarter of 2013 compared to the first quarter of 2012 was primarily the result of the transition of activities to third-party service providers associated with components of our technology infrastructure and application maintenance and support, as we continued to implement the Business Operations and Information Technology Transformation program.

Additional information with respect to the impact of this program on future compensation and employee benefits and information systems and communications expenses is provided in the following "Restructuring Charges" section.

Acquisition Costs

In the first quarter of 2013 and the first quarter of 2012, we incurred acquisition costs of \$15 million and \$13 million, respectively, related to previously disclosed acquisitions.

Restructuring Charges

In the first quarter of 2013, we recorded a net restructuring credit of \$1 million, composed of \$8 million of restructuring charges related to the continuing implementation of our Business Operations and Information Technology Transformation program, offset by credits of \$9 million related to expense control measures initiated by us in the fourth quarter of 2012. In the first quarter of 2012, we recorded \$8 million of restructuring charges, composed of \$15 million related to the Business Operations and Information Technology Transformation program, partially offset by a \$7 million credit related to expense control measures we initiated in December 2011, specifically our withdrawal from our fixed-income trading initiative.

Information with respect to these initiatives (the Business Operations and Information Technology Transformation program and the 2011 and 2012 expense control measures), including charges, employee reductions and aggregate activity in the related accruals, is provided in the following sections.

Table of ContentsMANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION
AND RESULTS OF OPERATIONS (Continued)

Business Operations and Information Technology Transformation Program

In November 2010, we announced a global multi-year Business Operations and Information Technology Transformation program. The program includes operational, information technology and targeted cost initiatives, including plans related to reductions in both staff and occupancy costs.

With respect to our business operations, we are standardizing certain core business processes, primarily through our execution of the State Street Lean methodology, and driving automation of these business processes. We are currently creating a new technology platform, including transferring certain core software applications to a private cloud, and have expanded our use of service providers associated with components of our information technology infrastructure and application maintenance and support. We expect the transfer of core software applications to a private cloud to occur primarily in 2013 and 2014.

To implement this program, we expect to incur aggregate pre-tax restructuring charges of approximately \$400 million to \$450 million over the four-year period ending December 31, 2014. To date, we have recorded aggregate restructuring charges of \$364 million in our consolidated statement of income, composed of \$156 million in 2010, \$133 million in 2011, \$67 million in 2012 and \$8 million in the first quarter of 2013. The following table presents the charges by type of cost:

(In millions)	Employee-Related Costs	Real Estate Consolidation	Information Technology Costs	Total
2010	\$ 105	\$ 51	\$—	\$ 156
2011	85	7	41	133
2012	27	20	20	67
First quarter of 2013	9	—	(1) 8
Total	\$ 226	\$ 78	\$ 60	\$ 364

The employee-related costs included severance, benefits and outplacement services. Real estate consolidation costs resulted from actions taken to reduce our occupancy costs through consolidation of leases and properties. Information technology costs included transition fees related to the above-described expansion of our use of service providers. In 2010, in connection with the program, we initiated the involuntary termination of 1,400 employees, or approximately 5% of our global workforce, which was substantially complete at the end of 2011. In addition, in 2011, in connection with the expansion of our use of service providers associated with our information technology infrastructure and application maintenance and support, we identified 530 employees to be involuntarily terminated as their roles were eliminated. In 2012 and in the first quarter of 2013, an additional 164 and 148 positions, respectively, were identified for elimination. As of March 31, 2013, in connection with the planned aggregate staff reduction of 2,242 employees described above, 2,065 of such identified employees had been involuntarily terminated, composed of 550 employees in 2010, 782 employees in 2011, 697 employees in 2012 and 36 employees in the first quarter of 2013. In connection with the continuing implementation of the program, we achieved approximately \$86 million of pre-tax expense savings in 2011, and additional pre-tax expense savings of approximately \$112 million in 2012, compared to our 2010 total expenses from operations. As of December 31, 2012, we have achieved total pre-tax expense savings of approximately \$198 million since the program's inception in 2010. Additional pre-tax expense savings in 2013 are forecasted to be approximately \$220 million.

Excluding the expected aggregate restructuring charges of \$400 million to \$450 million described earlier, we expect the program to reduce our pre-tax expenses from operations, on an annualized basis, by approximately \$575 million to \$625 million by the end of 2014 compared to 2010, all else being equal, with the full effect realized in 2015. We expect the business operations transformation component of the program to result in approximately \$450 million of these savings, with the majority of these savings expected to be achieved by the end of 2013. In addition, we expect the information technology transformation component of the program to result in approximately \$150 million of these savings.

These pre-tax savings relate only to the Business Operations and Information Technology Transformation program and are based on projected improvement from our total 2010 expenses from operations. Our actual total expenses have increased since 2010, and may in the future increase or decrease, due to other factors. The majority of the annual savings will affect compensation and employee benefits expenses. These savings will be modestly offset by increases in information systems and communications expenses as we implement the program.

2011 Expense Control Measures

In the fourth quarter of 2011, in connection with expense control measures designed to calibrate our expenses to our outlook for our capital markets-facing businesses in 2012, we took two actions. First, we withdrew from our fixed-income trading initiative, in which we traded in fixed-income securities and derivatives as principal with our custody clients and other third-parties that trade in these securities and derivatives. Second, we undertook other targeted staff reductions. As a result of

Table of ContentsMANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION
AND RESULTS OF OPERATIONS (Continued)

these actions, we recorded aggregate pre-tax restructuring charges of \$120 million in 2011 and a net pre-tax credit of \$1 million in 2012, in our consolidated statement of income. We did not record any restructuring charges in the first quarter of 2013 related to these expense control measures. The following table presents the charges related to the 2011 expense control measures by type of cost:

(In millions)	Employee-Related Costs	Fixed-Income Trading Portfolio	Asset and Other Write-Offs	Total
2011	\$ 62	\$38	\$20	\$120
2012	3	(9) 5	(1
First quarter of 2013	—	—	—	—
Total	\$ 65	\$29	\$25	\$119

The employee-related costs included severance, benefits and outplacement services with respect to both aspects of the expense control measures. In connection with these measures, we identified 442 employees to be involuntarily terminated as their roles were eliminated. As of March 31, 2013, 384 employees had been involuntarily terminated, composed of 15 employees in 2011, 363 employees in 2012 and 6 employees in the first quarter of 2013.

The costs related to the fixed-income trading portfolio resulted primarily from fair-value adjustments to the initiative's trading portfolio related to our decision to withdraw from the initiative. In connection with our withdrawal, in 2012, we wound down that initiative's remaining trading portfolio. Costs for asset and other write-offs were related to asset write-downs and contract terminations.

2012 Expense Control Measures

In the fourth quarter of 2012, in connection with expense control measures designed to better align our expenses to our business strategy and related outlook for 2013, we identified additional targeted staff reductions. As a result of these actions, we recorded aggregate pre-tax restructuring charges of \$133 million in 2012 and a net pre-tax credit of \$9 million in the first quarter of 2013, in our consolidated statement of income. The following table presents the charges related to the 2012 expense control measures by type of cost:

(In millions)	Employee-Related Costs	Asset and Other Write-Offs	Total
2012	\$ 129	\$4	\$133
First quarter of 2013	(9) —	(9
Total	\$ 120	\$4	\$124

The employee-related costs included severance, benefits and outplacement services. In connection with these expense control measures, we identified 630 employees to be involuntarily terminated as their roles are eliminated. As of March 31, 2013, 453 employees had been involuntarily terminated, composed of 40 employees in 2012 and 413 employees in the first quarter of 2013. Costs for asset and other write-offs were related to contract terminations. The credit recorded in the first quarter of 2013 was related to adjustments to severance and benefits-related charges recorded in 2012.

Adjustments of accruals for 2012 expense control measures	(9) —	—	—	—	(9)
Payments and adjustments	(44) (6) (4) —	(3) (57)
Balance as of March 31, 2013	\$151	\$ 43	\$—	\$—	\$10	\$204	

INCOME TAX EXPENSE

Income tax expense was \$145 million in the first quarter of 2013 compared to \$159 million in the first quarter of 2012. Our effective tax rate in the first quarter of 2013 was 23.8% compared to 27.2% in the same period in 2012, with the decline primarily associated with an increase in renewable energy investments in 2013.

LINE OF BUSINESS INFORMATION

We have two lines of business: Investment Servicing and Investment Management. Given our services and management organization, the results of operations for these lines of business are not necessarily comparable with those of other companies, including companies in the financial services industry. Information about our two lines of

business, as well as the revenues, expenses and capital allocation methodologies associated with them, is provided in note 15 to the consolidated financial statements included in this Form 10-Q.

The following is a summary of our line of business results for the periods indicated. The “Other” columns for 2013 and 2012 included net acquisition and restructuring costs. The “Other” column for 2012 also included provisions for litigation exposure. The amounts in the “Other” columns were not allocated to State Street's business lines. Results for 2012 reflect reclassifications, for comparative purposes, related to management changes in methodology associated with funds transfer pricing and expense allocation reflected in results for 2013.

Average assets (in billions)	\$204.4	\$184.3	\$3.9	\$3.9			\$208.3	\$188.2

Investment Servicing

Total revenue in the first quarter of 2013 was flat compared to the first quarter of 2012, while total fee revenue increased 3% in the same comparison. The increase in total fee revenue generally resulted from increases in servicing fees, partly offset by decreases in processing fees and other revenue and securities finance revenue.

Servicing fees in the first quarter of 2013 increased 9% compared to the first quarter of 2012. The increase primarily resulted from the impact of stronger global equity markets and the impact of net new business installed on current-period revenue, as well as the addition of revenue from the October 2012 GSAS acquisition.

The decline in processing fees and other revenue compared to the first quarter of 2012 was mainly due to the positive fair-value adjustments of \$24 million recorded in the first quarter of 2012 related to our withdrawal from our fixed-income trading initiative. Securities finance revenue decreased 22% as a result of lower spreads and lower lending volumes.

Servicing fees, trading services revenue and gains related to investment securities, net, for our Investment Servicing business line are identical to the respective consolidated results. Refer to "Servicing Fees," "Trading Services" and "Gains (Losses) Related to Investment Securities, Net" under "Total Revenue" in this Management's Discussion and Analysis for a more in-depth discussion. A discussion of securities finance revenue and processing fees and other revenue is provided under "Securities Finance" and "Processing Fees and Other" in "Total Revenue."

Net interest revenue in the first quarter of 2013 declined 8% compared to the first quarter of 2012, generally the result of lower yields on earning assets related to lower global market rates and repricing on floating-rate investment securities, partly offset by lower funding costs. Yields on the investment portfolio were also affected by the reinvestment of pay-downs and other runoff into lower-yielding securities. The decrease was partially offset by the impacts of growth in the investment portfolio, lower funding costs, and higher levels of client deposits invested with the Federal Reserve, the ECB and other non-U.S. central banks.

Total expenses from operations increased 1% in the first quarter of 2013 compared to the first quarter of 2012. Information systems and communications expenses increased, primarily the result of the transition of activities to third-party service providers associated with components of our technology infrastructure and application maintenance and support. Also contributing to the increase in information systems and communications expenses were costs incurred to support business growth and the addition of expenses from the acquired GSAS business. These increases were partly offset by the effect of declines in staffing levels on employee compensation and benefits expenses.

Table of Contents

MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION
AND RESULTS OF OPERATIONS (Continued)

Investment Management

Total revenue in the first quarter of 2013 increased 7% compared to the first quarter of 2012, mainly the result of an increase in management fees, partly offset by a decline in processing fees and other revenue.

Management fees increased 11% in the first quarter of 2013 compared to the first quarter of 2012, primarily the result of stronger equity market valuations and the impact of net new business installed on current-period revenue.

Management fees for the Investment Management business line are identical to the respective consolidated results.

Refer to "Management Fees" in "Total Revenue" in this Management's Discussion and Analysis for a more in-depth discussion.

FINANCIAL CONDITION

The structure of our consolidated statement of condition is primarily driven by the liabilities generated by our Investment Servicing and Investment Management lines of business. Our clients' needs and our operating objectives determine balance sheet volume, mix and currency denomination. As our clients execute their worldwide cash management and investment activities, they utilize short-term investments and deposits that constitute the majority of our liabilities. These liabilities are generally in the form of non-interest-bearing demand deposits; interest-bearing transaction account deposits, which are denominated in a variety of currencies; and repurchase agreements, which generally serve as short-term investment alternatives for our clients.

Deposits and other liabilities generated by client activities are invested in assets that generally match the liquidity and interest-rate characteristics of the liabilities, although the weighted-average maturities of our assets are significantly longer than the contractual maturities of our liabilities. Our assets consist primarily of securities held in our available-for-sale or held-to-maturity portfolios and short-duration financial instruments, such as interest-bearing deposits and securities purchased under resale agreements. The actual mix of assets is determined by the characteristics of the client liabilities and our desire to maintain a well-diversified portfolio of high-quality assets. The following table presents the components of our average total interest-earning and noninterest-earning assets, average total interest-bearing and noninterest-bearing liabilities, and average preferred and common shareholders' equity for the quarters ended March 31, 2013 and 2012. Additional information about our average statement of condition, primarily our interest-earning assets and interest-bearing liabilities, is included under "Consolidated Results of Operations - Total Revenue - Net Interest Revenue" in this Management's Discussion and Analysis.

Table of ContentsMANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION
AND RESULTS OF OPERATIONS (Continued)

Additional information about our investment securities portfolio is provided in note 3 to the consolidated financial statements included in this Form 10-Q.

We manage our investment securities portfolio to align with the interest-rate and duration characteristics of our client liabilities and in the context of the overall structure of our consolidated statement of condition, and in consideration of the global interest-rate environment. We consider a well-diversified, high-credit quality investment securities portfolio to be an important element in the management of our consolidated statement of condition.

The portfolio is concentrated in securities with high credit quality, with approximately 88% of the carrying value of the portfolio rated "AAA" or "AA" as of March 31, 2013. The following table presents the percentages of the carrying value of the portfolio, by external credit rating, as of the dates indicated:

	March 31, 2013		December 31, 2012	
AAA ⁽¹⁾	70	%	69	%
AA	18		19	
A	7		7	
BBB	3		3	
Below BBB	2		2	
	100	%	100	%

⁽¹⁾ Includes U.S. Treasury securities that are split-rated, "AAA" by Moody's Investors Service and "AA+" by Standard & Poor's.

As of March 31, 2013, the investment portfolio of approximately 10,980 securities was diversified with respect to asset class. Approximately 76% of the aggregate carrying value of the portfolio as of that date was composed of mortgage-backed and asset-backed securities. The predominantly floating-rate asset-backed portfolio consisted primarily of student loan-backed and credit card-backed securities. Mortgage-backed securities were composed of securities issued by the Federal National Mortgage Association and Federal Home Loan Mortgage Corporation, as well as U.S. and non-U.S. large-issuer collateralized mortgage obligations.

Our investment securities portfolio represented approximately 54% of our consolidated total assets as of both March 31, 2013 and December 31, 2012, and the gross interest revenue associated with our investment securities portfolio represented approximately 23% and 26% of our consolidated total gross revenue for the quarters ended March 31, 2013 and 2012, respectively. Our investment securities portfolio represents a greater proportion of our consolidated statement of condition and loans represent a smaller proportion, in comparison to many other major financial institutions. In some respects, the accounting and regulatory treatment of our investment securities portfolio may be less favorable to us than a more traditional held-for-investment lending portfolio or a portfolio of U.S. treasury securities. For example, under proposed Basel III capital rules, changes in the fair value of investment securities classified as available for sale would be included in the determination of tier 1 capital. Since loans held for investment are not subject to a fair-value accounting framework, changes in the fair value of loans (other than incurred credit losses) are not similarly included in the determination of tier 1 capital under those proposals.

Non-U.S. Debt Securities

Approximately 24% of the aggregate carrying value of the portfolio as of March 31, 2013 was composed of non-U.S. debt securities. The following table presents our non-U.S. debt securities available for sale and held to maturity, included in the preceding table of investment securities carrying values, by significant country of issuer or location of collateral, as of the dates indicated:

Table of ContentsMANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION

Other	128	132
Total	\$4,615	\$3,726

Approximately 86% and 87% of the aggregate carrying value of these non-U.S. debt securities was rated "AAA" or "AA" as of March 31, 2013 and December 31, 2012, respectively. The majority of these securities comprise senior positions within the security structures; these positions have a level of protection provided through subordination and other forms of credit protection. As of March 31, 2013, these non-U.S. securities had an aggregate pre-tax net unrealized gain of approximately \$476 million and an average market-to-book ratio of 101.8%. The majority are floating-rate securities, and accordingly, are considered to have minimal interest-rate risk.

The underlying collateral for mortgage- and asset-backed securities primarily included U.K. prime mortgages, Australian and Netherlands mortgages and German automobile loans. The securities listed under "Canada" were mainly composed of Canadian government securities. The securities listed under "Japan" were substantially composed of Japanese government securities. The "other" category of available-for-sale securities included approximately \$59 million and \$105 million of securities as of March 31, 2013 and December 31, 2012, respectively, related to Portugal and Ireland, all of which were mortgage-backed securities. The "other" category of held-to-maturity securities included approximately \$125 million and \$130 million of securities as of March 31, 2013 and December 31, 2012, respectively, related to Portugal and Ireland, all of which were mortgage-backed securities.

Our aggregate exposure to Spain, Italy, Ireland and Portugal as of March 31, 2013 included no direct sovereign debt exposure to any of these countries. Our indirect exposure to these countries totaled approximately \$717 million, including approximately \$563 million of mortgage- and asset-backed securities with an aggregate pre-tax gross unrealized loss of approximately \$29 million as of March 31, 2013. We recorded no other-than-temporary impairment on these mortgage- and asset-backed securities in the first quarter of 2013 or the first quarter of 2012.

Following an easing of Eurozone crisis-related tensions from the fourth quarter of 2012 into early 2013, the first quarter of 2013 ended with renewed tensions associated with the Cyprus bailout and Italian political volatility.

Economic performance remains weak in Spain, Italy, Ireland and Portugal. Throughout the sovereign crisis, the major independent credit rating agencies have downgraded, and may in the future do so again, U.S. and non-U.S. financial institutions and sovereign issuers which have been, and may in the future be, significant counterparties to us, or whose financial instruments serve as collateral on which we rely for credit risk mitigation purposes. As a result, we may be exposed to increased counterparty risk, leading to negative ratings volatility.

Table of ContentsMANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION
AND RESULTS OF OPERATIONS (Continued)

Country risks with respect to Spain, Italy, Ireland and Portugal are identified, assessed and monitored by our Country and Counterparty Exposure Committee. Country limits are defined in our credit and counterparty risk guidelines, in accordance with our credit and counterparty risk policy. These limits are monitored on a daily basis by Enterprise Risk Management, or ERM. These country exposures are subject to ongoing surveillance and stress test analysis, conducted by the investment portfolio management team. The stress tests performed reflect the structure and nature of the exposure, its past and projected future performance based on macroeconomic and environmental analysis, with key underlying assumptions varied under a range of scenarios, reflecting downward pressure on collateral performance. The results of the stress tests are presented to senior management and ERM as part of the surveillance process. In addition, ERM conducts separate stress-test analyses and evaluates the structured asset exposures in these countries for the assessment of other-than-temporary impairment. The assumptions used in these evaluations reflect expected downward pressure on collateral performance. Stress scenarios are subject to regular review, and are updated to reflect changes in the economic environment, measures taken in response to the sovereign crisis and collateral performance, with particular attention to these specific country exposures.

Municipal Securities

We carried an aggregate of approximately \$7.67 billion of municipal securities, classified as state and political subdivisions in the preceding table of investment securities carrying values, in our investment portfolio as of March 31, 2013. Substantially all of these securities were classified as available for sale, with the remainder classified as held to maturity. We also provided approximately \$8.11 billion of credit and liquidity facilities to municipal issuers as a form of credit enhancement. The following tables present our combined credit exposure to state and municipal obligors which represented 5% or more of our aggregate municipal credit exposure of approximately \$15.78 billion and \$16.12 billion across our businesses as of the dates indicated, grouped by state to display geographic dispersion:

March 31, 2013	Total Municipal Securities	Credit and Liquidity Facilities	Total	% of Total Municipal Exposure	
(Dollars in millions)					
State of Issuer:					
Texas	\$1,104	\$1,920	\$3,024	19	%
New York	533	969	1,502	10	
Massachusetts	852	508	1,360	9	
California	189	1,108	1,297	8	
New Jersey	847	—	847	5	
Florida	142	614	756	5	
Total	\$3,667	\$5,119	\$8,786		

December 31, 2012	Total Municipal Securities	Credit and Liquidity Facilities	Total	% of Total Municipal Exposure	
(Dollars in millions)					
State of Issuer:					
Texas	\$1,091	\$1,957	\$3,048	19	%
New York	486	973	1,459	9	
Massachusetts	869	508	1,377	9	
California	190	1,158	1,348	8	
New Jersey	867	—	867	5	
Florida	148	680	828	5	
Total	\$3,651	\$5,276	\$8,927		

Our aggregate municipal securities exposure presented above is concentrated primarily with highly-rated counterparties, with approximately 83% of the obligors rated "AAA" or "AA" as of March 31, 2013. As of that date,

approximately 69% and 28% of our aggregate exposure was associated with general obligation and revenue bonds, respectively. In addition, we had no exposures associated with healthcare, industrial development or land development bonds. The portfolios are also diversified geographically; the states that represent our largest exposure are widely dispersed across the U.S.

Table of ContentsMANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION
AND RESULTS OF OPERATIONS (Continued)

Additional information with respect to our analysis of other-than-temporary impairment of our municipal securities is provided in note 3 to the consolidated financial statements included in this Form 10-Q.

Impairment

The following table presents net unrealized gains on securities available for sale as of the dates indicated:

(In millions)	March 31, 2013	December 31, 2012
Fair value	\$103,836	\$109,682
Amortized cost	102,549	108,563
Net unrealized gain, pre-tax	\$1,287	\$1,119
Net unrealized gain, after-tax	\$795	\$708

The net unrealized gains presented above exclude the remaining net unrealized losses related to reclassifications of securities available for sale to securities held to maturity in 2008. These unrealized losses related to reclassifications totaled \$157 million, or \$97 million after-tax, and \$176 million, or \$110 million after-tax, as of March 31, 2013 and December 31, 2012, respectively, and were recorded in accumulated other comprehensive income within shareholders' equity in our consolidated statement of condition. Refer to note 9 to the consolidated financial statements included in this Form 10-Q. The decline in these remaining after-tax unrealized losses related to reclassifications from December 31, 2012 to March 31, 2013 resulted primarily from amortization.

We conduct periodic reviews of individual securities to assess whether other-than-temporary impairment exists. Our assessment of other-than-temporary impairment involves an evaluation, more fully described in note 3 to the consolidated financial statements, of economic and security-specific factors. Such factors are based on estimates, derived by management, which contemplate current market conditions and security-specific performance. To the extent that market conditions are worse than management's expectations, other-than-temporary impairment could increase, in particular the credit-related component that would be recorded in our consolidated statement of income. Given the exposure of our investment securities portfolio, particularly mortgage- and asset-backed securities, to residential mortgage and other consumer credit risks, the performance of the U.S. housing market continues to be a factor in the portfolio's credit performance. As such, our assessment of other-than-temporary impairment relies, in part, on our estimates of trends in national housing prices in addition to trends in unemployment rates, interest rates and the timing of defaults. Generally, indices that measure trends in national housing prices are published in arrears. As of December 31, 2012, national housing prices, according to the Case-Shiller National Home Price Index, had declined by approximately 28.8% peak-to-current. Overall, for purposes of our evaluation of other-than-temporary impairment as of March 31, 2013, we expect a U.S. housing recovery characterized by relatively modest growth in national housing prices over the next few years. In connection with our assessment of other-than-temporary impairment with respect to relevant securities in our investment portfolio in future periods, we will consider trends in national housing prices that we observe at those times, including the Case-Shiller National Home Price Index, in addition to trends in unemployment rates, interest rates and the timing of defaults.

The other-than-temporary impairment of our investment portfolio continues to be sensitive to our estimates of future cumulative losses. However, given our recent more positive outlook for U.S. national housing prices, our sensitivity analysis indicates, as of March 31, 2013, that our investment portfolio is currently less exposed to the overall housing price outlook relative to other factors including unemployment rates and interest rates than it was as of December 31, 2012.

The residential mortgage servicing environment remains challenging, and the timeline to liquidate distressed loans continues to extend. The rate at which distressed residential mortgages are liquidated may affect, among other things, our investment securities portfolio. Such effects could include the timing of cash flows or the credit quality associated with the mortgages collateralizing certain of our residential mortgage-backed securities, which, accordingly, could result in the recognition of additional other-than-temporary impairment in future periods.

Our evaluation of potential other-than-temporary impairment of mortgage-backed securities with collateral located in Spain, Italy, Ireland and Portugal takes into account government intervention in the corresponding mortgage markets and assumes a negative baseline macroeconomic environment for this region, due to a combination of slower economic growth and government austerity measures. Our baseline view assumes a recessionary period characterized by higher unemployment and by additional declines in housing prices of between 10% and 19% across these four countries. Our evaluation of other-than-temporary impairment in our base case does not assume a disorderly sovereign debt restructuring or a break-up of the Eurozone.

In addition, we perform stress testing and sensitivity analysis in order to assess the impact of more severe assumptions on potential other-than-temporary impairment. We estimate, for example, that in more stressful scenarios in which unemployment,

Table of ContentsMANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION
AND RESULTS OF OPERATIONS (Continued)

gross domestic product and housing prices in these four countries deteriorate more than we expected as of March 31, 2013, other-than-temporary impairment could increase by a range of approximately \$22 million to \$50 million. This sensitivity estimate is based on a number of factors, including, but not limited to, the level of housing prices and the timing of defaults. To the extent that such factors differ significantly from management's current expectations, resulting loss estimates may differ materially from those stated.

Excluding other-than-temporary impairment recorded in the first quarter of 2013, management considers the aggregate decline in fair value of the remaining securities and the resulting net unrealized losses as of March 31, 2013 to be temporary and not the result of any material changes in the credit characteristics of the securities. Additional information about these net unrealized losses and our assessment of impairment is provided in note 3 to the consolidated financial statements included in this Form 10-Q.

Loans and Leases

The following table presents our U.S. and non-U.S. loans and leases, by segment, as of the dates indicated:

(In millions)	March 31, 2013	December 31, 2012
Institutional:		
U.S.	\$10,697	\$9,645
Non-U.S.	2,879	2,251
Commercial real estate:		
U.S.	409	411
Total loans and leases	\$13,985	\$12,307
Allowance for loan losses	(22) (22
Loans and leases, net of allowance for loan losses	\$13,963	\$12,285

Additional information about these loan and lease segments, including underlying classes, is provided in note 4 to the consolidated financial statements included in this Form 10-Q, and in note 5 to the consolidated financial statements included in our 2012 Form 10-K.

Aggregate short-duration advances to our clients included in the institutional segment were \$4.32 billion and \$3.30 billion as of March 31, 2013 and December 31, 2012, respectively. As of March 31, 2013 and December 31, 2012, unearned income deducted from our investment in leveraged lease financing was \$128 million and \$131 million, respectively, for U.S. leases and \$320 million and \$334 million, respectively, for non-U.S. leases.

As of March 31, 2013 and December 31, 2012, we held an aggregate of approximately \$195 million and \$197 million, respectively, of commercial real estate loans which were modified in troubled debt restructurings. No impairment loss was recognized upon restructuring of the loans, as the discounted cash flows of the modified loans exceeded the carrying amount of the original loans as of the modification date. No loans were modified in troubled debt restructurings in the first quarter of 2013 or in all of 2012.

The following table presents activity in the allowance for loan losses for the periods indicated:

(In millions)	Three Months Ended March 31,	
	2013	2012
Allowance for loan losses:		
Beginning balance	\$22	\$22
Provision for loan losses:		
Commercial real estate	1	—
Recoveries:		
Commercial real estate	(1) —
Ending balance	\$22	\$22
Cross-Border Outstandings		

Cross-border outstandings are amounts payable to State Street by non-U.S. counterparties which are denominated in U.S. dollars or other non-local currency, as well as non-U.S. local currency claims not funded by local currency liabilities. Our cross-border outstandings consist primarily of deposits with banks; loans and lease financing, including short-duration advances; investment securities; amounts related to foreign exchange and interest-rate contracts; and securities finance. In

30

Table of ContentsMANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION
AND RESULTS OF OPERATIONS (Continued)

addition to credit risk, cross-border outstandings have the risk that, as a result of political or economic conditions in a country, borrowers may be unable to meet their contractual repayment obligations of principal and/or interest when due because of the unavailability of, or restrictions on, foreign exchange needed by borrowers to repay their obligations.

Additional information with respect to the nature of our cross-border outstandings is provided under "Financial Condition - Cross-Border Outstandings" in Management's Discussion and Analysis included in our 2012 Form 10-K. The following table presents our cross-border outstandings in countries in which we do business, and which amounted to at least 1% of our consolidated total assets as of the dates indicated. The aggregate of the total cross-border outstandings presented in the table represented approximately 20% and 22% of our consolidated total assets as of March 31, 2013 and December 31, 2012, respectively.

(In millions)	Investment Securities and Other Assets	Derivatives and Securities on Loan	Total Cross-Border Outstandings
March 31, 2013			
United Kingdom	\$ 14,364	\$ 1,407	\$ 15,771
Germany	8,650	635	9,285
Australia	7,160	258	7,418
Netherlands	3,692	347	4,039
Canada	2,351	403	2,754
Japan	2,048	399	2,447
Switzerland	1,928	399	2,327
December 31, 2012			
United Kingdom	\$ 18,046	\$ 1,033	\$ 19,079
Australia	7,585	328	7,913
Japan	6,625	1,041	7,666
Germany	7,426	220	7,646
Netherlands	3,130	188	3,318
Canada	2,730	500	3,230

Aggregate cross-border outstandings in countries which amounted to between 0.75% and 1% of our consolidated total assets totaled approximately \$2.07 billion and \$1.98 billion to France and Luxembourg, respectively, as of March 31, 2013, and \$1.81 billion and \$1.70 to France and Luxembourg, respectively, as of December 31, 2012.

Several European countries, particularly Spain, Italy, Ireland and Portugal, have experienced credit deterioration associated with weaknesses in their economic and fiscal situations. With respect to this ongoing uncertainty, we are closely monitoring our exposure to these countries. We had no direct sovereign debt securities related to these countries in our investment portfolio. We had aggregate indirect exposure in the portfolio of approximately \$717 million, including \$563 million of mortgage- and asset-backed securities, composed of \$264 million in Spain, \$114 million in Italy, \$110 million in Ireland and \$75 million in Portugal, as of March 31, 2013.

Table of ContentsMANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION
AND RESULTS OF OPERATIONS (Continued)

The following table presents our cross-border outstandings in each of these countries as of the dates indicated:

(In millions)	Investment Securities and Other Assets	Derivatives and Securities on Loan	Total Cross-Border Outstandings
March 31, 2013			
Italy	\$933	\$15	\$ 948
Ireland	332	560	892
Spain	264	10	274
Portugal	75	1	76
December 31, 2012			
Italy	\$937	\$1	\$ 938
Ireland	342	277	619
Spain	277	16	293
Portugal	76	—	76

As of March 31, 2013, none of the exposures in these countries was individually greater than 0.75% of our consolidated total assets. The aggregate exposures consisted primarily of interest-bearing deposits, investment securities, loans, including short-duration advances, and foreign exchange contracts. We had not recorded any other-than-temporary impairment associated with expected credit losses, or provisions for loan losses, with respect to any of our exposures in these countries as of March 31, 2013.

Capital

The management of both regulatory and economic capital involves key metrics evaluated by management to assess whether our actual level of capital is commensurate with our risk profile, is in compliance with all regulatory requirements, and is sufficient to provide us with the financial flexibility to undertake future strategic business initiatives.

Regulatory Capital

Our objective with respect to regulatory capital management is to maintain a strong capital base in order to provide financial flexibility for our business needs, including funding corporate growth and supporting clients' cash management needs, and to provide protection against loss to depositors and creditors. We strive to maintain an appropriate level of capital, commensurate with our risk profile, on which an attractive return to shareholders is expected to be realized over both the short and long term, while protecting our obligations to depositors and creditors and complying with regulatory capital adequacy requirements. Our capital management process focuses on our risk exposures, our regulatory capital requirements, the evaluations of the major independent credit rating agencies that assign ratings to our public debt and our capital position relative to our peers.

Additional information about our capital management process is provided under "Financial Condition—Capital" in Management's Discussion and Analysis included in our 2012 Form 10-K.

The following table presents regulatory capital ratios and the related components of capital and total risk-weighted assets for State Street and State Street Bank as of the dates indicated. As of March 31, 2013, State Street and State Street Bank met all capital adequacy requirements to which they were subject, and regulatory capital ratios for State Street and State Street Bank exceeded the regulatory minimum and "well capitalized" thresholds.

Table of ContentsMANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION
AND RESULTS OF OPERATIONS (Continued)

(Dollars in millions)	Regulatory Guidelines ⁽¹⁾		State Street		State Street Bank		
	Minimum	Well Capitalized	March 31, 2013	December 31, 2012	March 31, 2013	December 31, 2012	
Risk-based ratios:							
Tier 1 capital	4	% 6	% 18.0	% 19.1	% 16.1	% 17.3	%
Total capital	8	10	19.2	20.6	17.6	19.1	
Tier 1 leverage ratio	4	5	6.9	7.1	6.1	6.3	
Tier 1 capital			\$13,753	\$13,760	\$11,865	\$12,044	
Total capital			14,640	14,829	12,946	13,306	
Adjusted total risk-weighted assets and market risk equivalent assets:							
On-balance sheet assets			61,426	58,238	58,867	55,949	
Off-balance sheet equivalent assets			13,963	13,155	13,955	13,144	
Market risk equivalent assets			876	519	876	445	
Total			\$76,265	\$71,912	\$73,698	\$69,538	
Adjusted quarterly average assets			\$199,240	\$192,817	\$196,033	\$189,780	

⁽¹⁾ State Street Bank must comply with the regulatory guideline for “well capitalized” in order for the parent company to maintain its status as a financial holding company, including maintaining a minimum tier 1 risk-based capital ratio of 6%, a minimum total risk-based capital ratio of 10%, and a minimum tier 1 leverage ratio of 5%. The “well capitalized” guideline requires us to maintain a minimum tier 1 risk-based capital ratio of 6% and a minimum total risk-based capital ratio of 10%.

As of March 31, 2013, State Street's and State Street Bank's tier 1 risk-based, total risk-based and tier 1 leverage ratios declined compared to December 31, 2012, primarily the result of increases in total risk-weighted assets and, with respect to the leverage ratio, increases in adjusted quarterly average assets. State Street's capital in the same comparison was flat (tier 1) or down slightly (total), as net income was offset by declarations of common stock dividends and purchases by us of our common stock. The increases in total risk-weighted assets as of March 31, 2013 compared to December 31, 2012 were primarily associated with on-balance sheet assets, composed of higher levels of loans and other assets. The increases in adjusted quarterly average assets were associated with balance sheet growth during the quarter.

Common Stock

In March 2013, we received the results of the Federal Reserve's review of our 2013 capital plan in connection with their CCAR process. The Federal Reserve did not object to the capital actions we proposed, and as we previously announced, in March 2013, our Board of Directors approved a new common stock purchase program authorizing the purchase of up to \$2.10 billion of our common stock through March 31, 2014. This new common stock purchase program follows the \$1.80 billion program authorized by the Board in March 2012 and fully executed from April 2012 through February 2013.

We did not purchase any of our common stock under the new program in the first quarter of 2013. We completed the March 2012 program by purchasing approximately 6.5 million shares of our common stock, at an average cost of \$54.95 per share and an aggregate cost of approximately \$360 million in the first quarter of 2013.

Basel Capital Framework

The current generally-applicable minimum regulatory capital requirements enforced by the U.S. banking regulators are based on a 1988 international accord, commonly referred to as Basel I, which was developed by the Basel Committee on Banking Supervision, or Basel Committee.

In 2004, the Basel Committee released the final version of a new capital adequacy framework, referred to as Basel II. Basel II governs the capital adequacy of large, internationally active banking organizations, such as State Street, that generally rely on sophisticated risk management and measurement systems, and requires these organizations to enhance their measurement and management of the risks underlying their business activities and to better align their regulatory capital requirements with those underlying risks. Basel II adopts a three-pillar framework for addressing capital adequacy and minimum capital requirements, which incorporates Pillar 1, the measurement of credit risk, market risk and operational risk; Pillar 2, supervisory review, which addresses the need for a banking organization to assess its capital adequacy relative to the risks underlying its business activities, rather than only with respect to its minimum regulatory capital requirements; and Pillar 3, market discipline, which imposes public disclosure requirements on a banking organization intended to allow the assessment of key information about the organization's risk profile and its associated level of regulatory capital.

Table of ContentsMANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION
AND RESULTS OF OPERATIONS (Continued)

In December 2007, U.S. banking regulators jointly issued final rules to implement the Basel II framework in the U.S. The framework does not supersede or change the existing prompt corrective action and leverage capital requirements applicable to banking organizations in the U.S., and explicitly reserves the regulators' authority to require organizations to hold additional capital where appropriate. Prior to full implementation of the Basel II framework, State Street is required to complete a defined qualification period, during which it must demonstrate that it complies with the related regulatory requirements to the satisfaction of the Federal Reserve. State Street is currently in the qualification period for Basel II.

In 2010, in response to the financial crisis and ongoing global financial market dynamics, the Basel Committee proposed new guidelines, referred to as Basel III. Basel III would establish more stringent regulatory capital and liquidity requirements, including higher minimum regulatory capital ratios, new capital buffers, higher risk-weighted asset calibrations, more restrictive definitions of qualifying capital, a liquidity coverage ratio and a net stable funding ratio. We expect that Basel III, once adopted by U.S. banking regulators, as well as the Dodd-Frank Wall Street Reform and Consumer Protection Act, or Dodd-Frank Act, and the resulting regulations will change the manner in which our regulatory capital ratios are calculated, will reduce our capital as so calculated, and will increase the minimum regulatory capital that we will be required to maintain.

In June 2012, U.S. banking regulators jointly issued three concurrent Notices of Proposed Rulemaking, or NPRs, to implement the Basel III framework in the U.S. The NPRs propose to revise both Basel I as well as specific provisions of the Basel II-based regulatory capital requirements and, together with relevant portions of the Dodd-Frank Act, restructure the U.S. capital rules into a harmonized and comprehensive capital framework. Among other things, the NPRs raise the minimum tier 1 risk-based capital ratio from 4% to 6%, add requirements for a minimum common equity tier 1 capital ratio of 4.5% and a minimum supplemental tier 1 leverage ratio of 3%, and implement a capital conservation buffer and a countercyclical capital buffer linked to a banking organization's common equity tier 1 capital levels. We continue to review and evaluate these proposals, and currently await their finalization.

Under the NPRs, the minimum risk-based capital ratio provisions are expected to be effective beginning on January 1, 2015, and the proposed requirement for the capital conservation buffer is expected to be phased in beginning on January 1, 2016 with full implementation by January 1, 2019. Under the NPRs, a banking organization would be able to make capital distributions and discretionary bonus payments without specified limitations as long as it maintains the required capital conservation buffer of 2.5% over each of the minimum tier 1 and total risk-based capital ratios and the common equity tier 1 capital ratio (plus any potentially applicable countercyclical capital buffer). Banking regulators would determine the minimum countercyclical capital buffer, up to a maximum of 2.5% above the proposed minimum ratios inclusive of the capital conservation buffer.

In addition, based on our current review of the NPRs, we anticipate that the eligibility of trust preferred securities for tier 1 capital will be phased out over a multi-year transition period. Our trust preferred securities outstanding were \$950 million as of March 31, 2013.

Our current assessment of the implications of the above-described Basel III NPRs, the U.S. banking regulators' proposed implementation of these standards, and other international regulatory initiatives indicates a potential material impact on our businesses and our profitability, as well as on our regulatory capital ratios. One significant provision in the NPRs would require us to apply the "Simplified Supervisory Formula Approach," referred to as the SSFA, in the risk-weighting of asset securitization exposures, such as asset-backed securities, carried in our investment securities portfolio. The approach required by Basel II utilizes the ratings-based approach, under which external credit ratings are used to risk-weight such exposures. The Dodd-Frank Act prohibits the use of external credit ratings in the risk-weighting of asset securitization exposures. Currently, our investment portfolio contains significant holdings of mortgage- and asset-backed securities that are highly rated by credit rating agencies, but for which the SSFA would apply higher regulatory risk weights compared to the approach required by Basel I and previous Basel III proposals. In contrast, certain of our securities with lower credit ratings would receive lower regulatory risk weights if the SSFA were applied.

Based on the composition of our investment portfolio with respect to the types of securities and related external credit ratings as of March 31, 2013, if the proposals in the NPRs were implemented as currently structured, our application of the SSFA would materially increase our total regulatory risk-weighted assets relative to those calculated in conformity with Basel I, and correspondingly decrease our regulatory risk-based capital ratios relative to those calculated in conformity with Basel I; as a result, we are re-evaluating the composition of our investment portfolio in order to maintain an investment strategy appropriately aligned with our maintenance of an appropriate level of regulatory capital. Depending on future market conditions, this re-evaluation could result in the reinvestment of our portfolio securities into different types of investments, which could materially affect our consolidated results of operations by reducing our net interest revenue.

Certain of the proposals in the NPRs, including the requirement to apply the SSFA, are not anticipated to be fully effective before 2015, although they may be implemented, in whole or in part, earlier, with or without a phase-in period. As such, a significant number of the securities currently held in our investment portfolio that are highly rated by credit agencies are expected to mature or pay down over the intervening period, and we would currently anticipate replacing those securities

Table of ContentsMANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION
AND RESULTS OF OPERATIONS (Continued)

pursuant to our re-investment program in a manner that would seek to manage our risk appetite, our return objectives and our levels of regulatory capital. As a result of our balance sheet management efforts, all else being equal, we would anticipate being able to significantly offset, in whole or in part, the impact of application of the SSFA on our total regulatory risk-weighted assets and related regulatory risk-based capital ratios.

Until U.S. banking regulators finalize new rules implementing Basel III and relevant provisions of the Dodd-Frank Act, determining with certainty the alignment of our regulatory capital and our operations with the U.S. regulatory capital requirements, or when we will be expected to be compliant with such requirements, is not possible. We believe, however, that we will be able to comply with the relevant Basel II and Basel III regulatory capital and liquidity requirements when and as applied to us.

In August 2012, U.S. banking regulators finalized a new market risk capital rule, generally referred to as Basel 2.5. Basel 2.5, which was effective on January 1, 2013, supplements Basel I and Basel II, and replaces the prior market risk capital rules under Basel I and Basel II in place since 1998, by requiring banking organizations with significant trading activities, as defined in the rule, to adjust their regulatory risk-based capital ratios to reflect the market risk in their trading activities. Among other things, Basel 2.5 requires the use of internal models to calculate daily measures of Value-at-Risk, or VaR, that reflect general market risk for certain trading positions called "covered positions," as well as stressed VaR-based measures to supplement the VaR-based measures. Our adoption of Basel 2.5 did not significantly affect our or State Street Bank's risk-based capital ratios as of March 31, 2013. Disclosures required by Basel 2.5 are provided under "Financial Condition - Market Risk - Trading Activities" in this Management's Discussion and Analysis.

We are designated as a large bank holding company subject to enhanced supervision and prudential standards, commonly referred to as a "systemically important financial institution," or SIFI, and we are one among a group of 28 institutions worldwide that have been identified by the Financial Stability Board, or FSB, and the Basel Committee as "global systemically important banks," or G-SIBs. Our designation as a G-SIB will require us to maintain an additional capital buffer, ranging between 1% and 2.5%, above the proposed Basel III minimum common equity tier 1 capital ratio requirement, based on a number of factors, as evaluated by banking regulators. Factors in this evaluation will include our size, interconnectedness, substitutability, complexity and cross-jurisdictional activities. In November 2012, the FSB designated us as a category 1 organization, with a capital surcharge of 1%, although this designation and the associated additional capital buffer are subject to change. We expect these additional capital requirements for G-SIBs to be phased in beginning on January 1, 2016, with full implementation by January 1, 2019.

Economic Capital

We define economic capital as the capital required to protect holders of our senior debt, and obligations higher in priority, against unexpected economic losses over a one-year period at a level consistent with the solvency of a firm with our target "Aa3/AA-" senior bank debt rating. Economic capital requirements are one of several important measures used by management and the Board of Directors to assess the adequacy of our capital levels in relation to State Street's risk profile. Due to the evolving nature of quantification techniques, we expect to periodically refine the methodologies, assumptions, and information used to estimate our economic capital requirements; such requirements could result in a different amount of capital needed to support our business activities.

We have begun to measure returns on economic capital and economic profit (defined by us as net income available to common shareholders after deduction of State Street's cost of equity capital) by line of business. This economic profit will be used by management and the Board to gauge risk-adjusted performance over time. Accordingly, the measurement and evaluation of risk-adjusted performance have become integral parts of our internal process for allocating resources (for example, capital and information technology spending) by line of business. In addition, return on capital and economic profit are two of several measures used in our evaluation of the viability of a new business or product initiative and for merger-and-acquisition analysis.

We quantify economic capital requirements for the risks inherent in our business activities and group them into categories that we broadly define for these purposes as follows:

-

Market risk: the risk of adverse financial impact due to fluctuations in market prices, primarily as they relate to our trading activities;

Interest-rate risk: the risk of loss in non-trading asset-and-liability management positions, primarily the impact of adverse movements in interest rates on the repricing mismatches that exist between the assets and liabilities carried in our consolidated statement of condition;

Credit risk: the risk of loss that may result from the default or downgrade of a borrower or counterparty;

Operational risk: the risk of loss from inadequate or failed internal processes, people and systems, or from external events, which is consistent with the Basel II definition; and

Table of Contents

MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION
AND RESULTS OF OPERATIONS (Continued)

Business risk: the risk of negative earnings resulting from adverse changes in business factors, including changes in the competitive environment, changes in the operational economics of our business activities, and the effect of strategic and reputation risks.

Economic capital for each of these five categories is estimated on a stand-alone basis using scenario analysis and statistical modeling techniques applied to internally-generated and, in some cases, external information. These individual results are then aggregated at the State Street consolidated level.

Liquidity

The objective of liquidity management is to provide for the ability to meet our financial obligations in a timely and cost-effective manner, and that we maintain sufficient flexibility to fund strategic corporate initiatives as they arise. Effective management of liquidity involves assessing the potential mismatch between the future cash needs of our clients and our available sources of cash under normal and adverse economic and business conditions. Significant uses of liquidity, described more fully below, consist primarily of funding client deposit withdrawals and outstanding commitments to extend credit or commitments to purchase securities as they are drawn upon. Liquidity is provided by the maintenance of broad access to the global capital markets and by the asset structure in our consolidated statement of condition. Additional information about our liquidity is provided under "Financial Condition - Liquidity" in Management's Discussion and Analysis included in our 2012 Form 10-K.

We generally manage our liquidity on a global basis at the State Street consolidated level. We also manage parent company liquidity, and in certain cases branch liquidity, separately. State Street Bank generally has broader access to funding products and markets limited to banks, specifically the federal funds market and the Federal Reserve's discount window. The parent company is managed to a more conservative liquidity profile, reflecting narrower market access. The parent company typically holds enough cash, primarily in the form of interest-bearing deposits with its banking subsidiaries, to meet its current debt maturities and cash needs, as well as those projected over the next one-year period.

The sources of our liquidity consist of two primary areas: access to the global capital markets and liquid assets carried in our consolidated statement of condition. Our ability to source incremental funding at reasonable rates of interest from wholesale investors in the capital markets is the first source of liquidity we would access to accommodate the uses of liquidity described below. On-balance sheet liquid assets are also an integral component of our liquidity management strategy. These assets provide liquidity through maturities of the assets, but more importantly, they provide us with the ability to raise funds by pledging the securities as collateral for borrowings or through outright sales.

In addition, State Street Bank is a member of the Federal Home Loan Bank of Boston. This membership allows for advances of liquidity in varying terms against high-quality collateral, which helps facilitate asset-and-liability management of depository institutions. No Federal Home Loan Bank advances were outstanding as of March 31, 2013 or December 31, 2012. Each of the above-described sources of liquidity is used in our management of daily cash needs and is available in a crisis scenario should we need to accommodate potential large, unexpected demand for funds.

Significant uses of our liquidity generally result from the following: withdrawals of unsecured client deposits; draw-downs of unfunded commitments to extend credit or to purchase securities, generally provided through lines of credit; and short-duration advance facilities. Client deposits are generated largely from our investment servicing activities, and are invested in a combination of investment securities and short-duration financial instruments whose mix is determined by the characteristics of the deposits. Most of the client deposits are payable on demand or are short-term in nature, which characteristics mean that withdrawals can potentially occur quickly and in large amounts. Similarly, clients can request disbursement of funds under commitments to extend credit, or can overdraw their deposit accounts rapidly and in large volumes. In addition, a large volume of unanticipated funding requirements, such as large draw-downs of existing lines of credit, could require additional liquidity.

Material risks to sources of short-term liquidity could include, among other things, adverse changes in the perception in the financial markets of our financial condition or our liquidity needs, and downgrades by major independent credit

rating agencies of our deposits and our debt securities, which would restrict our ability to access the capital markets and could lead to withdrawals of unsecured deposits by our clients.

In managing our liquidity, we have issued term wholesale certificates of deposit, or CDs, and invested those funds in short-duration financial instruments which are carried in our consolidated statement of condition and which would be available to meet our cash needs. As of March 31, 2013, this wholesale CD portfolio totaled \$4.64 billion, compared to \$13.56 billion as of December 31, 2012, as client deposits remained stable.

While maintenance of our high investment-grade credit rating is of primary importance to our liquidity management program, our on-balance sheet liquid assets represent significant liquidity that we can directly control, and provide a source of cash in the form of principal maturities and the ability to borrow from the capital markets using our securities as collateral. Our net liquid assets consist primarily of cash balances at central banks in excess of regulatory requirements and other short-

Table of ContentsMANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION
AND RESULTS OF OPERATIONS (Continued)

duration liquid assets, such as interest-bearing deposits with banks, which are multi-currency instruments invested with major multi-national banks; and high-quality, marketable investment securities not already pledged, which generally are more liquid than other types of assets and can be sold or borrowed against to generate cash quickly. As of March 31, 2013, the value of our consolidated net liquid assets, as defined, totaled \$133.2 billion, compared to \$149.02 billion as of December 31, 2012. For the quarter ended March 31, 2013, consolidated average net liquid assets were \$120.39 billion compared to \$108.42 billion for the quarter ended March 31, 2012. Due to the unusual size and volatile nature of client deposits, we maintained cash balances in excess of regulatory requirements of approximately \$31.52 billion at the Federal Reserve, the ECB and other non-U.S. central banks as of March 31, 2013, compared to \$41.11 billion as of December 31, 2012. As of March 31, 2013, the value of the parent company's net liquid assets totaled \$3.93 billion, compared with \$3.80 billion as of December 31, 2012. The parent company's liquid assets consisted primarily of overnight placements with its banking subsidiaries.

Aggregate investment securities carried at \$47.01 billion as of March 31, 2013, compared to \$46.66 billion as of December 31, 2012 were designated as pledged for public and trust deposits, borrowed funds and for other purposes as provided by law, and are excluded from the liquid assets calculation, unless pledged internally between State Street affiliates. Liquid assets included securities pledged to the Federal Reserve Bank of Boston to secure State Street Bank's ability to borrow from their discount window should the need arise. This access to primary credit is an important source of back-up liquidity for State Street Bank. As of March 31, 2013, State Street Bank had no outstanding primary credit borrowings from the discount window.

Based on our level of consolidated liquid assets and our ability to access the capital markets for additional funding when necessary, including our ability to issue debt and equity securities under our current universal shelf registration, management considers State Street's overall liquidity as of March 31, 2013 to be sufficient to meet its current commitments and business needs, including accommodating the transaction and cash management needs of its clients. We maintain an effective universal shelf registration that allows for the public offering and sale of debt securities, capital securities, common stock, depositary shares and preferred stock, and warrants to purchase such securities, including any shares into which the preferred stock and depositary shares may be convertible, or any combination thereof. We have issued in the past, and we may issue in the future, securities pursuant to this shelf registration. The issuance of debt or equity securities will depend on future market conditions, funding needs and other factors.

We currently maintain a corporate commercial paper program, under which we can issue up to \$3 billion with original maturities of up to 270 days from the date of issue. As of March 31, 2013, we had \$2.24 billion of commercial paper outstanding under this corporate program, compared to \$2.32 billion as of December 31, 2012.

As of March 31, 2013, State Street Bank had Board authority to issue unsecured senior debt securities from time to time, provided that the aggregate principal amount of such unsecured senior debt outstanding at any one time does not exceed \$5 billion. As of March 31, 2013, \$4 billion was available for issuance pursuant to this authority. As of March 31, 2013, State Street Bank had Board authority to issue up to \$1.5 billion of subordinated debt, incremental to subordinated debt outstanding as of the same date. As of March 31, 2013, all \$1.5 billion was available for issuance pursuant to this authority.

State Street Bank currently maintains a line of credit with a financial institution of CAD \$800 million, or approximately \$786 million as of March 31, 2013, to support its Canadian securities processing operations. The line of credit has no stated termination date and is cancelable by either party with prior notice. As of March 31, 2013, no balance was outstanding on this line of credit.

Risk Management

The global scope of our business activities requires that we balance what we perceive to be the primary risks in our businesses with a comprehensive and well-integrated risk management function. The identification, assessment, monitoring, mitigation and reporting of risks are essential to the financial performance and successful management of our businesses. These risks, if not effectively managed, can result in current losses to State Street as well as erosion of our capital and damage to our reputation. Our systematic approach allows for an assessment of risks within a framework for evaluating opportunities for the prudent use of capital that appropriately balances risk and return.

We have a disciplined approach to risk that involves all levels of management. The Board, through its Risk and Capital Committee, provides oversight and review of our overall risk management programs, including the approval of key risk management policies and the periodic review of State Street's "Risk Appetite Statement," which is an integral part of our overall Internal Capital Adequacy Assessment Process, or ICAAP. The Risk Appetite Statement outlines the quantitative limits and qualitative goals that define and constrain our risk appetite and defines responsibilities for measuring and monitoring risk against limits, which are reported regularly to the Board. In addition, State Street utilizes a variety of key risk indicators to monitor risk on a more granular level. ERM, a corporate group, provides risk oversight, support and coordination to allow for consistent identification, measurement and management of risks across business units separate from the business units'

Table of Contents

MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION
AND RESULTS OF OPERATIONS (Continued)

activities, and is responsible for the formulation and maintenance of enterprise-wide risk management policies and guidelines. In addition, ERM establishes and reviews approved limits and, in collaboration with business unit management, monitors key risks. The Chief Risk Officer, or CRO, manages ERM and reports to both the Chief Executive Officer and the Board's Risk and Capital Committee.

The execution of duties with respect to the management of people, products, business operations and processes is the responsibility of business unit managers. The function of risk management is designing and directing the implementation of risk management programs and processes consistent with corporate and regulatory standards, and providing oversight of the business-owned risks. Accordingly, risk management is a shared responsibility between ERM and the business units, and requires joint efforts in goal setting, program design and implementation, resource management, and performance evaluation between business and functional units. In addition, Corporate Audit separately assesses the effectiveness of business units and risk management in the execution of their responsibilities.

Responsibility for risk management is overseen by a series of management committees, as well as the Board's Risk and Capital Committee. The Management Risk and Capital Committee, or MRAC, co-chaired by our CRO and Chief Financial Officer, is the senior management decision-making body for risk and capital issues, and is responsible for aligning State Street's strategy, budget, risk appetite and capital adequacy. Our Asset, Liability and Capital Committee, or ALCCO, chaired by our Treasurer, oversees the management of our consolidated statement of condition, the management of our global liquidity and interest-rate risk positions, our regulatory and economic capital, the determination of the framework for capital allocation and strategies for capital structure, and debt and equity issuances.

State Street's risk management program is supported by the activities of a number of corporate risk oversight committees, chaired by senior executives in ERM. Our Fiduciary Review Committee reviews and assesses the risk management programs of those units in which State Street serves in a fiduciary capacity. Our Credit Risk and Policy Committee is responsible for cross-business unit review and oversight of credit and counterparty risk. Our Credit Committee is responsible for the review, recommendation and approval of material policies, procedures and guidelines governing the identification, measurement, analysis and control of material credit risk across State Street. Our Country and Counterparty Exposure Committee oversees the identification, assessment, monitoring, reporting and mitigation, where necessary, of country risks. Our Operational Risk Committee provides cross-business oversight of operational risk to identify, measure, manage and control operational risk consistently across State Street. Our Model Assessment Committee provides recommendations concerning technical modeling issues and validates financial models utilized by our business units.

While we believe that our risk management program is effective in managing the risks in our businesses, external factors may create risks that cannot always be identified or anticipated.

Market Risk

Market risk is defined by U.S. banking regulators as the risk of loss that could result from broad market movements, such as changes in the general level of interest rates, credit spreads, foreign exchange rates or commodity prices. State Street is exposed to market risk in both its trading and certain of its non-trading, or asset-and-liability management, activities. The market risk management processes related to these activities, discussed in further detail below, apply to both on- and off-balance sheet exposures.

In the conduct of our trading and investment activities, we assume market risk. The level of market risk that we assume is a function of our overall risk appetite, business objectives and liquidity needs, our clients' requirements and market volatility, and our execution against those factors. Market risk associated with our trading activities is discussed below under "Trading Activities." Market risk associated with our non-trading activities, which consists primarily of interest-rate risk, is discussed under "Asset-and-Liability Management Activities."

Trading Activities

We engage in trading activities primarily to support our clients' needs and to contribute to our overall corporate earnings and liquidity. In connection with certain of these trading activities, we enter into a variety of derivative financial instruments to support our clients' needs and to manage our interest-rate and currency risk. These activities

are generally intended to generate trading services revenue and to manage potential earnings volatility. In addition, we provide services related to derivatives in our role as both a manager and a servicer of financial assets. Our clients use derivatives to manage the financial risks associated with their investment goals and business activities. With the growth of cross-border investing, our clients often enter into foreign exchange forward contracts to convert currency for international investments and to manage the currency risk in their international investment portfolios. As an active participant in the foreign exchange markets, we provide foreign exchange forward and option contracts in support of these client needs, and also act as a dealer in the currency markets.

As part of our trading activities, we assume positions in the foreign exchange and interest-rate markets by buying and selling cash instruments and entering into derivative instruments, including foreign exchange forward contracts, foreign

Table of Contents

MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION
AND RESULTS OF OPERATIONS (Continued)

exchange and interest-rate options and interest-rate swaps, interest-rate forward contracts, and interest-rate futures. As of March 31, 2013, the aggregate notional amount of these derivative contracts was \$988.86 billion, of which \$967.41 billion was composed of foreign exchange forward, swap and spot contracts. In the aggregate, we seek to match positions closely with the objective of minimizing related currency and interest-rate risk. All foreign exchange contracts are valued daily at current market rates. Additional information about derivative instruments entered into in connection with our trading activities is provided in note 10 to the consolidated financial statements included in this Form 10-Q.

Governance

Our assumption of market risk in our trading activities is an integral part of our corporate risk appetite. The Board reviews and oversees our management of market risk, including the approval of key market risk policies and the receipt and review of regular market risk reporting, as well as periodic updates on selected market risk topics. The Trading and Markets Risk Committee, or TMRC, is a management committee that oversees all market risk-taking activities across State Street associated with trading. The TMRC, which reports to the MRAC, is composed of members of ERM, our Global Markets business, our Global Treasury group, our senior executives who manage our trading businesses, and other members of management who possess specialized knowledge and expertise. Under authority delegated by the MRAC, the TMRC is responsible for the formulation of guidelines, strategies and work flows with respect to the measurement, monitoring and control of our trading market risk, and also approves market risk tolerance limits and dealing authorities. The TMRC meets regularly to monitor the management of our trading market risk activities.

Our business units identify, actively manage and are responsible for the market risks inherent in their businesses. A dedicated market risk management group within ERM, and other groups within ERM, work with those business units to assist them in the identification, assessment, monitoring, management and control of market risk, and assist business unit managers with their market risk management and measurement activities. ERM provides an additional line of oversight, support and coordination designed to promote the consistent identification, measurement and management of market risk across business units, separate from those business units' discrete activities.

The ERM market risk management group is responsible for the management of corporate-wide market risk, the monitoring of key market risks and the development and maintenance of market risk management policies, guidelines, and standards aligned with our corporate risk appetite. This market risk management group also establishes and approves market risk tolerance limits and dealing authorities based on, but not limited to, notional amount measures, sensitivity measures, VaR measures and stress measures. Such limits and authorities are specified in our trading and market risk guidelines which govern our management of trading market risk.

Corporate Audit separately assesses the design and operating effectiveness of the market risk controls within our business units and ERM. Other related responsibilities of Corporate Audit include the periodic review of compliance, by ERM and the business units, with market risk policies, guidelines, and corporate standards, as well as relevant regulatory requirements. We are subject to regular monitoring, reviews and supervisory exams of our market risk function by the Federal Reserve. In addition, we are regulated by the SEC, the Financial Industry Regulatory Authority and the U.S. Commodities Futures Trading Commission.

Risk Appetite

Our corporate market risk appetite is specified in policy statements that outline the governance, responsibilities and requirements surrounding the identification, measurement, analysis, management and communication of market risk arising from our trading activities. These policy statements also set forth the market risk control framework to monitor, support, manage and control this portion of our risk appetite. All groups involved in the management and control of market risk associated with trading activities are required to comply with the qualitative and quantitative elements of these policy statements. Our trading market risk control framework is composed of the following components:

- ▲ trading market risk management process led by ERM, separate from the business units' discrete activities;
- Clearly defined responsibilities and authorities for the primary groups involved in trading market risk management;

• A trading market risk measurement methodology that captures correlation effects and allows aggregation of market risk across risk types, markets and business lines;

• Daily monitoring, analysis, and reporting of market risk exposures associated with trading activities against market risk limits;

• A defined limit structure and escalation process in the event of a market risk limit excess;

• Use of VaR models to measure the one-day market risk exposure of trading positions;

• Use of VaR as a ten-day-based regulatory capital measure of the market risk exposure of trading positions;

• Use of non-VaR-based limits and other controls;

Table of Contents

MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION
AND RESULTS OF OPERATIONS (Continued)

• Use of stressed VaR models, stress-testing and scenario analysis to support the trading market risk measurement and management process by assessing how portfolios and global business lines perform under extreme market conditions;
• Use of back-testing as a diagnostic tool to assess the accuracy of VaR models and other risk management techniques;
and

• A new-product-approval process that requires market risk teams to assess trading-related market risks and apply risk tolerance limits to proposed new products and business activities.

State Street uses its ICAAP to assess its overall capital and liquidity in relation to its risk profile and provide a comprehensive strategy for maintaining appropriate capital and liquidity levels. With respect to market risk associated with trading activities, our risk management and our calculations of regulatory capital and economic capital are based primarily on our internal VaR models and stress-testing analysis. As discussed in detail in the "Value-at-Risk" section, VaR is measured daily by ERM.

The TRMC oversees our market risk exposure in relation to limits established within our risk appetite framework. These limits define threshold levels for VaR- and stressed VaR-based measures and are applicable to all trading positions subject to regulatory capital requirements. These limits serve to prevent any undue concentration of market risk exposure, in light of the primarily non-proprietary nature of our trading activities. The risk appetite framework and associated limits are reviewed and approved by the Risk and Capital Committee of the Board.

Covered Positions

Our trading positions are subject to regulatory market risk capital requirements if they meet the definition of a "covered position." The identification of covered positions for inclusion in our market risk capital framework is governed by our covered positions policy. This policy outlines the standards we use to determine whether a trading position is a covered position.

Our covered positions consist primarily of those arising from the trading portfolios held by our Global Markets business. These trading portfolios include products such as spot foreign exchange, foreign exchange forwards, non-deliverable forwards, foreign exchange options, foreign exchange funding swaps, currency futures, financial futures, and interest rate futures. Covered positions also arise from certain portfolios held by our Global Treasury group. Any new activities are analyzed to determine if the positions arising from such new activities meet the definition of a covered position and conform to our covered positions policy. This documented analysis, including any decisions with respect to market risk treatments, must receive approval from the TMRC.

We use spot rates, forward points, yield curves and discount factors imported from third-party sources to measure the value of our covered positions, and we use such values to mark our covered positions to market on a daily basis. These values are subject to independent validation by us in order to evaluate reasonableness and consistency with market experience. The mark-to-market gain or loss on spot transactions is calculated by applying the spot rate to the foreign currency principal and comparing the resultant base currency amount to the original transaction principal. The mark-to-market gain or loss on a forward foreign exchange contract or forward cash flow contract is determined as the difference between the life-to-date (historical) value of the cash flow and the value of the cash flow at the inception of the transaction. The mark-to-market gain or loss on interest-rate swaps is determined by discounting the future cash flows from each leg of the swap transaction.

Value-at-Risk, Stress Testing and Stressed VaR

As noted above, we use a variety of risk measurement tools and methodologies, including VaR, which is an estimate of potential loss for a given period within a stated statistical confidence interval. We use a risk measurement methodology to measure VaR daily. We have adopted standards for measuring VaR, and we maintain regulatory capital for market risk in accordance with currently applicable bank regulatory market risk guidelines.

We utilize an internal VaR model to calculate our regulatory market risk capital requirements. We use a historical simulation model to calculate daily VaR- and stressed VaR-based measures for our covered positions in conformity with new requirements effective on January 1, 2013. Our VaR model seeks to capture identified material risk factors associated with our covered positions, including risks arising from market movements such as changes in foreign exchange rates, interest rates and option-implied volatilities.

We have adopted standards and guidelines to value our covered positions which govern our VaR- and stressed VaR-based measures. Our regulatory VaR-based measure is calculated based on a one-tail, 99% confidence interval and a ten-business day holding period, using a historical observation period of two years. We also use the same platform to calculate a one-tail, 99% confidence interval, one-day VaR for internal risk management purposes. A 99% one-tail confidence interval implies that daily trading losses are not expected to exceed the estimated VaR more than 1% of the time, or less than three business days out of a year.

Table of ContentsMANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION
AND RESULTS OF OPERATIONS (Continued)

Our market risk models, including our VaR model, are subject to change in connection with the governance, validation and back-testing processes described herein. These models can change as a result of changes in our business activities, our historical experiences, market forces and events, regulations and regulatory interpretations and other factors. In addition, the models are subject to continuing regulatory review and approval. Changes in our models may result in changes in our measurements of our market risk exposures, including VaR, and related measures, including regulatory capital. These changes could result in material changes in those risk measurements and related measures as calculated and compared from period to period.

Value-at-Risk

VaR measures are based on two years of historical price movements for instruments and risk factors to which we have exposure. The instruments in question are limited to foreign exchange spot, forward and options contracts and interest-rate contracts, including futures and interest-rate swaps. These instruments tend to exhibit a high degree of liquidity relative to other available capital markets instruments. As a result, the VaR measures shown reflect our ability to rapidly adjust exposures in highly dynamic markets. For this reason, risk inventory, in the form of net open positions, across all currencies is typically limited. In addition, long and short positions in major as well as minor currencies provide risk offsets that limit our potential downside exposure.

Our VaR methodology uses a historical simulation approach based on market observed changes in foreign exchange rates, U.S. and non-U.S. interest rates and implied volatilities, and incorporates the resulting diversification benefits provided from the mix of our trading positions. Our VaR model incorporates around 5,000 risk factors and captures correlations among currency, interest rates, and other market rates.

All VaR measures are subject to limitations and must be interpreted accordingly. Some of the limitations of our VaR methodology include the following:

- Compared to a shorter observation period, a two-year observation period is slower to reflect increases in market volatility, and temporary increases in market volatility will affect the calculation of VaR for a longer period; however, a two-year VaR would also not reflect all past periods of volatility in the markets, because such past volatility is no longer in the observation period;

- The VaR-based measure is calibrated to a specified level of confidence and does not indicate the potential magnitude of losses beyond this confidence level;

- In certain cases, VaR-based measures approximate the impact of changes in risk factors on the values of positions and portfolios; this may happen because the number of inputs included in the VaR model is necessarily limited; for example, yield curve risk factors do not exist for all future dates;

- The use of historical market information may not be predictive of future events, particularly those that are extreme in nature; this "backward-looking" limitation can cause VaR to understate or overstate risk;

- The effect of extreme and rare market movements is difficult to estimate; this may result from non-linear risk sensitivities as well as the potential for actual volatility and correlation levels to differ from assumptions implicit in the VaR calculations; and

- Intra-day risk is not captured.

Stress Testing and Stressed VaR

We have an enterprise-wide stress-testing program in place that incorporates an array of techniques to measure the potential loss we could suffer in a hypothetical scenario of adverse economic and financial conditions. We also monitor concentrations of risk such as concentration by branch, risk component, and currency pairs. We conduct stress testing on a daily basis, and we also perform stress testing as part of the Federal Reserve's CCAR process. Stress testing is conducted, analyzed and reported at the corporate, trading desk, division and risk-factor level (for example, exchange risk, interest-rate risk and volatility risk).

We calculate a stressed VaR-based measure using the same model we use to calculate VaR, but with model inputs calibrated to historical data from a continuous twelve-month period that reflects a period of significant financial stress. For each portfolio the stress period is determined algorithmically by seeking the one-year time horizon that produces the largest ten-day VaR from within the available historical data. This historical data set includes the financial crisis of

2008, the highly volatile period surrounding the Eurozone sovereign crisis and the Standard & Poor's downgrade of U.S. Treasury debt in 2011. As the historical data set used to determine the stress period expands over time, future market stress events will be automatically incorporated. The results capture extreme movements that are rare occurrences in any typical two-year period. The sixty-day moving average of our stressed VaR measure was approximately \$16 million during the twelve months ended March 31, 2013.

We perform scenario analysis daily based on selected historical stress events that are relevant to our positions in order to estimate the potential impact to our current portfolio should similar market conditions recur. Relevant scenarios are chosen

Table of ContentsMANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION
AND RESULTS OF OPERATIONS (Continued)

from an inventory of historical financial stresses and applied to our current portfolio. These historical event scenarios involve spot foreign exchange, credit, equity, unforeseen geo-political events and natural disasters, and government and central bank intervention scenarios. Examples of the specific historical scenarios we incorporate in our stress testing program may include the Asian financial crisis of 1997, the September 11, 2001 terrorist attacks in the U.S., and the most recent financial markets crisis. We continue to update our inventory of historical stress scenarios as new stress conditions emerge in the financial markets.

As each of the historical stress events is associated with a different time horizon, we normalize results by scaling down the longer horizon events to a ten-day horizon and keeping the shorter horizon events (i.e., events that are shorter than ten days) at their original terms. We also conduct sensitivity analysis daily to calculate the impact of a large predefined shock in a specific risk factor or a group of risk factors on our current portfolio. These predefined shocks include parallel and non-parallel yield curve shifts and foreign exchange spot and volatility surface shifts. In a parallel shift scenario we apply a constant factor shift across all yield curve tenors. In a non-parallel shift scenario we apply different shock levels to different tenors of a yield curve, rather than shifting the entire curve by a constant amount. Non-parallel shifts include steepening, flattening, and butterflies.

Stress-testing results and limits are actively monitored on a daily basis by ERM and reported to the TMRC. Limit breaches are addressed by ERM risk managers in conjunction with the business units, escalated as appropriate, and reviewed by the TMRC if material. In addition, we have established several action triggers that prompt immediate review by management and the implementation of a remediation plan.

Validation and Back-Testing

We perform daily back-testing to assess the accuracy of our VaR-based model in estimating loss at the stated confidence level. This back-testing involves the comparison of estimated VaR model outputs to actual profit-and-loss, or P&L, outcomes observed from daily market movements. We back-test our VaR model using "clean" P&L, which excludes non-trading revenue such as fees, commissions and net interest revenue, as well as estimated revenue from intra-day trading. Back-testing is also performed at the sub-portfolio level to identify products or risk components that may lead to potential exceptions.

Our market risk models are subject to regular review and validation by our model validation group within ERM and overseen by our Model Assessment Committee. The Model Assessment Committee, chaired by a senior executive in ERM, was established for the purpose of providing recommendations on technical modeling issues to the corporate oversight committees. The Model Assessment Committee includes members with expertise in modeling methodologies and has representation from the various business units throughout State Street. As part of its responsibilities, the Model Assessment Committee considers technical modeling issues for our market risk models, including the selection of an appropriate modeling approach, the setting of key model input assumptions, the deployment of substantive model changes, the deployment of new models as needed, and the monitoring of ongoing model performance.

Our market risk models are governed by our model risk governance guidelines, in accordance with our model risk governance policy, which outline the standards we use to assess the conceptual soundness and effectiveness of our models. Consistent with regulatory requirements, our market risk regulatory capital model is subject to an annual review process. The process identifies the areas of model risk for the three model components: input, processing and output. The model testing is concentrated in the areas of model risk identified by the Model Validation Group. The results of this annual review are communicated to the Model Assessment Committee, which then assigns "Pass," "Pass with Reservations," "Recommend a Full Scope Review," or "Fail" to the outcome.

Our model validation process also evaluates the integrity of our VaR models through the use of regular outcome analysis. Such outcome analysis includes back-testing, which compares the VaR model's predictions to actual outcomes using out-of-sample information. The Model Validation Group examined back-testing results for the market risk regulatory capital model used for 2012. Consistent with regulatory guidance, the back-testing compared "clean" P&L, defined above, with the one-day VaR produced by the model. The back-testing was performed for a time period not used for model development. The number of occurrences where "clean" trading-book P&L exceeded the one-day

VaR was within our expected VaR tolerance level.

Market Risk Reporting

Our ERM market risk function is responsible for market risk monitoring and reporting. We use a variety of systems and controlled market feeds from third-party services to compile data for several daily, weekly, and monthly management reports.

Our business units and trading market risk teams review daily P&L, market risk limit exceptions, open positions, interest-rate and option sensitivities and VaR reports on a daily basis. Market risk limit exceptions are also reported to and reviewed by the global head of Market Risk. We produce and review several other reports that summarize relevant market risk metrics, including VaR, on a periodic basis.

Table of ContentsMANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION
AND RESULTS OF OPERATIONS (Continued)

The following tables present VaR associated with our trading activities for covered positions held during the first quarter of 2013 and as of March 31, 2013, as measured by our VaR methodology. Comparative information for prior periods is not presented, as we did not measure VaR for the first quarter of 2012 or as of March 31, 2012 under the new requirements effective on January 1, 2013.

VaR - COVERED PORTFOLIOS (TEN-DAY VaR) (In thousands)	Quarter Ended March 31, 2013			As of March 31, 2013
	Average	Maximum	Minimum	VaR
Foreign exchange	\$7,114	\$22,835	\$1,626	\$9,283
Money market/Global Treasury	140	559	24	365
Total VaR	\$7,046	\$22,834	\$1,641	\$9,017

STRESSED VaR - COVERED PORTFOLIOS (TEN-DAY VaR) (In thousands)	Quarter Ended March 31, 2013			As of March 31, 2013
	Average	Maximum	Minimum	VaR
Foreign exchange	\$16,424	\$37,633	\$5,333	\$26,141
Money market/Global Treasury	310	965	56	900
Total Stressed VaR	\$16,313	\$37,445	\$5,385	\$20,254

The VaR measures presented above are primarily a reflection of the overall level of market volatility and State Street's appetite for trading market risk. Overall levels of volatility have been low both on an absolute basis and relative to the historical information observed at the beginning of the period used for calculations.

The ten-day VaR measures are based on historical changes observed during rolling ten-day periods over the past two years, a period that includes the volatility experienced during the market disruption caused by the Standard & Poor's downgrades of U.S. Treasury securities in August 2011. The stressed VaR measures are based on information observed during rolling ten-day periods over a single year of significant stress for our current portfolio. This period encompassed the 2008 financial crisis.

The measures presented above illustrate the magnitude of the volatility experienced during the above-described periods, which still influenced the measurements recorded for the ten-day VaR and stressed VaR for State Street's exposure profile during the most recent financial reporting period. State Street's risk appetite was low compared to nearly all risk metrics in force during the most recent reporting period, particularly when compared to a one-day VaR. The following table presents VaR associated with our trading activities attributable to interest rates, foreign exchange rates and volatility as of March 31, 2013. Comparative information as of March 31, 2012 is not presented, as we did not measure VaR as of that date under the new requirements effective on January 1, 2013.

VaR - COVERED PORTFOLIOS (TEN-DAY VaR) (In thousands)	As of March 31, 2013		
	Foreign Exchange	Interest Rate	Volatility
By component:			
Foreign exchange/Global Markets	\$9,543	\$2,265	\$492
Money market/Global Treasury	376	33	—
Total VaR	\$9,288	\$2,263	\$492

Asset-and-Liability Management Activities

The primary objective of asset-and-liability management is to provide sustainable and growing net interest revenue, or NIR, under varying economic environments, while protecting the economic value of the assets and liabilities carried in our consolidated statement of condition from the adverse effects of changes in interest rates. While many market factors affect the level of NIR and the economic value of our assets and liabilities, one of the most significant factors is our exposure to movements in interest rates. Most of our NIR is earned from the investment of client deposits generated by our businesses. We invest these client deposits in assets that conform generally to the characteristics of

our balance sheet liabilities, including the currency composition of our significant non-U.S. dollar denominated client liabilities, but we manage our overall interest-rate risk position in the context of current and anticipated market conditions and within internally-approved risk guidelines.

Table of Contents

MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS (Continued)

Our overall interest-rate risk position is maintained within a series of policies approved by the Board and guidelines established and monitored by ALCCO. Our Global Treasury group has responsibility for managing State Street's day-to-day interest-rate risk. To effectively manage our consolidated statement of condition and related NIR, Global Treasury has the authority to assume a limited amount of interest-rate risk based on market conditions and its views about the direction of global interest rates over both short-term and long-term time horizons. Global Treasury manages our exposure to changes in interest rates on a consolidated basis organized into three regional treasury units, North America, Europe and Asia/Pacific, to reflect the growing, global nature of our exposures and to capture the impact of change in regional market environments on our total risk position.

The economic value of our statement of condition is a metric designed to best estimate the fair value of assets and liabilities which could be garnered if the assets and liabilities were sold today. The economic values represent discounted cash flows from all financial instruments; therefore, changes in the yield curves, which are used to discount the cash flows, affect the values of these instruments. Additional information about our measurement of fair value is provided in note 2 to the consolidated financial statements included in this Form 10-Q.

Our investment activities and our use of derivative financial instruments are the primary tools used in managing interest-rate risk. We invest in financial instruments with currency, repricing, and maturity characteristics we consider appropriate to manage our overall interest-rate risk position. In addition, we use certain derivative instruments, primarily interest-rate swaps, to alter the interest-rate characteristics of specific balance sheet assets or liabilities. Our use of derivatives is subject to guidelines approved by ALCCO, within which we seek to manage. Additional information about our use of derivatives is provided in note 10 to the consolidated financial statements included in this Form 10-Q.

Because no one individual measure can accurately assess all of our exposures to changes in interest rates, we use several quantitative measures in our assessment of current and potential future exposures to changes in interest rates and their impact on NIR and balance sheet values. Net interest revenue simulation is the primary tool used in our evaluation of the potential range of possible NIR results that could occur under a variety of interest-rate environments. We also use market valuation and duration analysis to assess changes in the economic value of balance sheet assets and liabilities caused by assumed changes in interest rates.

To measure, monitor, and report on our interest-rate risk position, we use NIR simulation, or NIR-at-risk, and economic value of equity, or EVE, sensitivity. NIR-at-risk measures the impact on NIR over the next twelve months to immediate, or "rate shock," and gradual, or "rate ramp," changes in market interest rates. EVE sensitivity is a total return view of interest-rate risk, which measures the impact on the present value of all NIR-related principal and interest cash flows of an immediate change in interest rates, and is generally used in the context of economic capital discussed under "Economic Capital" in "Financial Condition - Capital" in this Management's Discussion and Analysis. Although NIR-at-risk and EVE sensitivity measure interest-rate risk over different time horizons, both utilize consistent assumptions when modeling the positions currently held by State Street; however, NIR-at-risk also incorporates future actions planned by management over the time horizons being modeled.

In calculating our NIR-at-risk, we start with a base amount of NIR that is projected over the next twelve months, assuming our forecasted yield curve over the period. Our existing balance sheet assets and liabilities are adjusted by the amount and timing of transactions that are forecasted to occur over the next twelve months. That yield curve is then "shocked," or moved immediately, ± 100 basis points in a parallel fashion, or at all points along the yield curve. Two new twelve-month NIR projections are then developed using the same balance sheet and forecasted transactions, but with the new yield curves, and compared to the base scenario. We also perform the calculations using interest rate ramps, which are ± 100 -basis-point changes in interest rates that are assumed to occur gradually over the next twelve months, rather than immediately as we do with interest-rate shocks.

EVE is based on the change in the present value of all NIR-related principal and interest cash flows for changes in market rates of interest. The present value of existing cash flows with a then-current yield curve serves as the base case. We then apply an immediate parallel shock to that yield curve of ± 200 basis points and recalculate the cash flows and related present values. A large shock is used to better capture the embedded option risk in our

mortgage-backed securities that results from borrowers' prepayment opportunities.

Key assumptions used in the models, described in more detail below, along with changes in market conditions, are inherently uncertain. Actual results necessarily differ from model results as market conditions differ from assumptions. As such, management performs back-testing, stress testing, and model integrity analyses to validate that the modeled results produce predictive NIR-at-risk and EVE sensitivity estimates which can be used in the management of interest-rate risk. Primary factors affecting the actual results are changes in balance sheet size and mix; the timing, magnitude and frequency of changes in interest rates, including the slope and the relationship between the interest-rate level of U.S. dollar and non-U.S. dollar yield curves; changes in market conditions; and management actions taken in response to the preceding conditions.

Table of ContentsMANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION
AND RESULTS OF OPERATIONS (Continued)

Both NIR-at-risk and EVE sensitivity results are managed against ALCCO-approved limits and guidelines and are monitored regularly, along with other relevant simulations, scenario analyses and stress tests, by both Global Treasury and ALCCO. Our ALCCO-approved guidelines are, we believe, in line with industry standards and are periodically examined by the Federal Reserve.

Based on our current balance sheet composition where fixed-rate assets exceed fixed-rate liabilities, reported results of NIR-at-risk could depict an increase in NIR from a rate increase while EVE presents a loss. A change in this balance sheet profile may result in different outcomes under both NIR-at-risk and EVE. NIR-at-risk depicts the change in the nominal (undiscounted) dollar net interest flows which are generated from the forecasted statement of condition over the next twelve months. As rates increase, the interest expense associated with our client deposit liabilities is assumed to increase at a slower pace than the investment returns derived from our current balance sheet or the associated reinvestment of our interest-earning assets, resulting in an overall increase to NIR. EVE, on the other hand, measures the present value change of both principal and interest cash flows based on the current period-end balance sheet. As a result, EVE does not contemplate reinvestment of our assets associated with a change in the interest-rate environment.

Although net interest revenue in both NIR-at-risk and EVE is higher in response to increased interest rates, the future principal flows on fixed-rate investments are discounted at higher rates for EVE, which results in lower asset values and a corresponding reduction or loss in EVE. As noted above, NIR-at-risk does not analyze changes in the value of principal cash flows and therefore does not experience the same reduction experienced by EVE sensitivity associated with discounting principal cash flows at higher rates.

NET INTEREST REVENUE AT RISK

NIR-at-risk is designed to measure the potential impact of changes in market interest rates on NIR in the short term. The impact of changes in market rates on NIR is measured against a baseline NIR which encompasses management's expectations regarding the evolving balance sheet volumes and interest rates in the near-term. The goal is to achieve an acceptable level of NIR under various interest-rate environments. Assumptions regarding levels of client deposits and our ability to price these deposits under various rate environments have a significant impact on the results of the NIR simulations. Similarly, the timing of cash flows from our investment portfolio, especially option-embedded financial instruments like mortgage-backed securities, and our ability to replace these cash flows in line with management's expectations, can affect the results of NIR simulations.

The following table presents the estimated exposure of NIR for the next twelve months, calculated as of the dates indicated, due to an immediate ± 100 -basis-point shift to our internal forecast of interest rates. Estimated incremental exposures presented below are dependent on management's assumptions and do not reflect any additional actions management may undertake in order to mitigate some of the adverse effects of changes in interest rates on State Street's financial performance.

(In millions)	Estimated Exposure to Net Interest Revenue	
	March 31, 2013	December 31, 2012
Rate change:		
+100 bps shock	\$186	\$156
-100 bps shock	(225)	(200)
+100 bps ramp	43	39
-100 bps ramp	(103)	(96)

As of March 31, 2013, NIR sensitivity to an upward-100-basis-point shock in market rates was slightly higher compared to December 31, 2012 due a higher level of forecasted client deposits. The benefit to NIR for an upward-100-basis-point ramp is less significant than a shock, since market rates are assumed to increase gradually. A downward-100-basis-point shock in market rates places pressure on NIR, as deposit rates reach their implicit floors due to the exceptionally low-interest-rate environment, and provide little funding relief on the liability side, while

assets reset into the lower-rate environment. NIR sensitivity to a downward-100-basis-point shock in market rates as of March 31, 2013 was higher compared to December 31, 2012 due to higher levels of forecasted noninterest-bearing deposits, which improve base NIR but provide no relief as rates fall.

Other important factors which affect the levels of NIR are the size and mix of assets carried in our consolidated statement of condition; interest-rate spreads; the slope and interest-rate level of U.S. and non-U.S. dollar yield curves and the relationship between them; the pace of change in market interest rates; and management actions taken in response to the preceding conditions.

Table of ContentsMANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION
AND RESULTS OF OPERATIONS (Continued)

ECONOMIC VALUE OF EQUITY

EVE sensitivity measures changes in the market value of equity to quantify potential losses to shareholders due to an immediate ± 200 -basis-point rate shock compared to current rate levels if the balance sheet were liquidated immediately. Management compares the change in EVE sensitivity against State Street's tier 1 and tier 2 risk-based capital to evaluate whether the magnitude of the exposure to interest rates is acceptable. Generally, a change resulting from a ± 200 -basis-point rate shock that is less than 20% of tier 1 and tier 2 risk-based capital is an exposure that management deems acceptable. To the extent that we manage changes in EVE within the 20% threshold, we would seek to take action to remain below the threshold if the magnitude of our exposure to interest rates approached that limit. Similar to NIR-at-risk measures, the timing of cash flows affects EVE, as changes in asset and liability values under different rate scenarios are dependent on when interest and principal payments are received. In contrast to NIR simulations, however, EVE sensitivity does not incorporate assumptions regarding reinvestment of these cash flows. In addition, our ability to price client deposits has a much smaller impact on EVE, as EVE sensitivity does not consider the ongoing benefit of investing client deposits.

The following table presents estimated EVE exposures, calculated as of the dates indicated, assuming an immediate and prolonged shift in interest rates, the impact of which would be spread over a number of years.

(In millions)	Estimated Sensitivity of Economic Value of Equity	
	March 31, 2013	December 31, 2012
Rate change:		
+200 bps shock	\$(2,521) \$(2,542
-200 bps shock	327	41

Exposure to upward- and downward-200-basis-point shocks as of March 31, 2013 improved compared to December 31, 2012. Lower holdings of mortgage-backed and collateralized mortgage obligation securities as of March 31, 2013 reduced the potential impact of mortgage prepayments on EVE sensitivity.

Credit and Counterparty Risk

Credit and counterparty risk is defined as the risk of financial loss if a borrower or counterparty is either unable or unwilling to repay borrowings or settle a transaction in accordance with underlying contractual terms. We assume credit and counterparty risk for both our on- and off-balance sheet exposures. The extension of credit and the acceptance of counterparty risk by State Street are governed by corporate guidelines based on each counterparty's risk profile, the markets served, counterparty and country concentrations, and regulatory compliance. Our focus on large institutional investors and their businesses requires that we assume concentrated credit risk for a variety of products and durations. We maintain guidelines and procedures to monitor and manage all aspects of credit and counterparty risk that we undertake.

We use an internal rating system to assess our risk of credit loss. State Street's risk-rating process incorporates the use of risk-rating tools in conjunction with management judgment. Qualitative and quantitative inputs are captured in a transparent and replicable manner; following a formal review and approval process, an internal credit rating based on our credit scale is assigned. We evaluate and risk-rate the credit of our counterparties on an individual basis at least annually. Significant exposures are reviewed daily by ERM. Processes for credit approval and monitoring are in place for all extensions of credit. As part of the approval and renewal process, due diligence is conducted based on the size and term of the exposure, as well as the creditworthiness of the counterparty. At any point in time, having one or more counterparties to which our exposure exceeds 10% of our consolidated total shareholders' equity, exclusive of unrealized gains or losses, is not unusual.

We provide, on a selective basis, traditional loan products and services to key clients in a manner that is intended to enhance client relationships, increase profitability and manage risk. We employ a relationship model in which credit decisions are based on credit quality and the overall institutional relationship.

An allowance for loan losses is maintained to absorb estimated incurred credit losses in our loan and lease portfolio as of the balance sheet date. This allowance is evaluated on a regular basis by management. The provision for loan losses is a charge to current earnings to maintain the overall allowance for loan losses at a level considered appropriate to absorb estimated incurred credit losses in the loan and lease portfolio.

We also assume other types of credit exposure with our clients and counterparties. We purchase securities under reverse repurchase agreements, which are agreements to resell. Most repurchase agreements are short-term, with maturities of less than 90 days. Risk is managed through a variety of processes, including establishing the acceptability of counterparties; limiting purchases primarily to low-risk U.S. government securities; taking possession or control of pledged assets; monitoring levels of underlying collateral; and limiting the duration of the agreements. Securities are revalued daily to determine if additional collateral is required from the borrower.

Table of Contents

MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION
AND RESULTS OF OPERATIONS (Continued)

We also provide our clients with off-balance sheet liquidity and credit-enhancement facilities in the form of letters and lines of credit and standby bond-purchase agreements. These exposures are subject to an initial credit analysis, with detailed approval and review processes. These facilities are also actively monitored and reviewed annually. We maintain a separate reserve for estimated probable credit losses related to certain of these off-balance sheet facilities as of the balance sheet date, which is recorded in accrued expenses and other liabilities in our consolidated statement of condition. This reserve is evaluated on a regular basis by management. Provisions to maintain the reserve at a level considered appropriate to absorb estimated probable credit losses in outstanding facilities are charged to other expenses in our consolidated statement of income.

Investments in debt and equity securities, including investments in affiliates, are monitored regularly by Corporate Finance and ERM. Procedures are in place for assessing impaired securities, as described in note 3 to the consolidated financial statements included in this Form 10-Q.

OFF-BALANCE SHEET ARRANGEMENTS

On behalf of clients enrolled in our securities lending program, we lend securities to banks, broker/dealers and other institutions. In most circumstances, we indemnify our clients for the fair market value of those securities against a failure of the borrower to return such securities. Though these transactions are collateralized, the substantial volume of these activities necessitates detailed credit-based underwriting and monitoring processes. The aggregate amount of indemnified securities on loan totaled \$314.94 billion as of March 31, 2013, compared to \$302.34 billion as of December 31, 2012. We require the borrowers to provide collateral in an amount equal to or in excess of 100% of the fair market value of the securities borrowed. State Street holds the collateral received in connection with its securities lending services as agent, and these holdings are not recorded in its consolidated statement of condition. The securities on loan and the collateral are revalued daily to determine if additional collateral is necessary. We held, as agent, cash and securities totaling \$327.95 billion and \$312.22 billion as collateral for indemnified securities on loan as of March 31, 2013 and December 31, 2012, respectively.

The collateral held by us as agent is invested on behalf of our clients. In certain cases, the collateral is invested in third-party repurchase agreements, for which we indemnify the client against loss of the principal invested. We require the counterparty to the repurchase agreement to provide collateral in an amount equal to or in excess of 100% of the amount of the repurchase agreement. In our role as agent, the indemnified repurchase agreements and the related collateral are not recorded in our consolidated statement of condition. Of the collateral of \$327.95 billion as of March 31, 2013 and \$312.22 billion as of December 31, 2012 referenced above, \$89.19 billion as of March 31, 2013 and \$80.22 billion as of December 31, 2012 was invested in indemnified repurchase agreements. We or our agents held \$94.55 billion and \$85.41 billion as collateral for indemnified investments in repurchase agreements as of March 31, 2013 and December 31, 2012, respectively.

Additional information about our securities finance activities and other off-balance sheet arrangements is provided in notes 7 and 10 to the consolidated financial statements included in this Form 10-Q.

QUANTITATIVE AND QUALITATIVE DISCLOSURES ABOUT MARKET RISK

The information provided under “Financial Condition - Risk Management - Market Risk” in Management’s Discussion and Analysis, included in this Form 10-Q, is incorporated by reference herein.

CONTROLS AND PROCEDURES

State Street has established and maintains disclosure controls and procedures that are designed to ensure that material information related to State Street and its subsidiaries on a consolidated basis required to be disclosed in its reports filed or submitted under the Securities Exchange Act of 1934 is recorded, processed, summarized, and reported within the time periods specified in the SEC’s rules and forms, and that such information is accumulated and communicated to State Street’s management, including its Chief Executive Officer and Chief Financial Officer, as appropriate, to allow timely decisions regarding required disclosure. For the quarter ended March 31, 2013, State Street’s management carried out an evaluation, with the participation of its Chief Executive Officer and Chief Financial Officer, of the effectiveness of the design and operation of State Street’s disclosure controls and procedures. Based on the evaluation of these disclosure controls and procedures, the Chief Executive Officer and Chief Financial Officer concluded that State Street’s disclosure controls and procedures were effective as of March 31, 2013.

State Street has also established and maintains internal control over financial reporting as a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of consolidated financial statements for external purposes in accordance with U.S. generally accepted accounting principles. In the ordinary course of business, State Street routinely enhances its internal controls and procedures for financial reporting by either upgrading its current systems or implementing new systems. Changes have been made and may be made to State Street’s internal controls and procedures for financial reporting as a result of these efforts. During the quarter ended March 31, 2013, no changes occurred in State Street’s internal control over financial reporting that has materially affected, or is reasonably likely to materially affect, State Street’s internal control over financial reporting.

STATE STREET CORPORATION
CONDENSED NOTES TO CONSOLIDATED FINANCIAL STATEMENTS
(UNAUDITED)

Note 1. Basis of Presentation

The accounting and financial reporting policies of State Street Corporation conform to U.S. generally accepted accounting principles, referred to as GAAP. State Street Corporation, the parent company, is a financial holding company headquartered in Boston, Massachusetts. Unless otherwise indicated or unless the context requires otherwise, all references in these condensed notes to consolidated financial statements to “State Street,” “we,” “us,” “our” or similar references mean State Street Corporation and its subsidiaries on a consolidated basis. Our principal banking subsidiary is State Street Bank and Trust Company, or State Street Bank.

We have two lines of business:

Investment Servicing provides services for mutual funds, collective investment funds and other investment pools, corporate and public retirement plans, insurance companies, foundations and endowments worldwide. Products include custody, product- and participant-level accounting, daily pricing and administration; master trust and master custody; record-keeping; foreign exchange, brokerage and other trading services; securities finance; deposit and short-term investment facilities; loans and lease financing; investment manager and alternative investment manager operations outsourcing; and performance, risk and compliance analytics to support institutional investors.

Investment Management, through State Street Global Advisors, or SSgA, provides a broad range of investment management strategies, specialized investment management advisory services and other financial services, such as securities finance, for corporations, public funds, and other sophisticated investors. Management strategies offered by SSgA include passive and active, such as enhanced indexing, using quantitative and fundamental methods for both U.S. and non-U.S. equity and fixed-income securities. SSgA also offers exchange-traded funds.

The consolidated financial statements accompanying these condensed notes are unaudited. In the opinion of management, all adjustments, consisting only of normal recurring adjustments, which are necessary for a fair statement of the consolidated results of operations in these financial statements, have been made. Certain previously reported amounts presented in this Form 10-Q have been reclassified to conform to current-period presentation. Events occurring subsequent to the date of our consolidated statement of condition were evaluated for potential recognition or disclosure in our consolidated financial statements through the date we filed this Form 10-Q with the SEC.

The preparation of consolidated financial statements in conformity with GAAP requires management to make estimates and assumptions in the application of certain of our significant accounting policies that may materially affect the reported amounts of assets, liabilities, equity, revenue and expenses. As a result of unanticipated events or circumstances, actual results could differ from those estimates. Amounts dependent on subjective or complex judgments in the application of accounting policies considered by management to be relatively more significant in this regard are those associated with our accounting for fair-value measurements; other-than-temporary impairment of investment securities; and impairment of goodwill and other intangible assets. Among other effects, unanticipated events or circumstances could result in future impairment of investment securities, goodwill or other intangible assets. Our consolidated statement of condition at December 31, 2012 included in the accompanying consolidated financial statements was derived from the audited financial statements at that date, but does not include all notes required by GAAP for a complete set of financial statements. The accompanying consolidated financial statements and these condensed notes should be read in conjunction with the financial and risk factors information included in our 2012 Form 10-K, which we previously filed with the SEC.

Note 2. Fair Value

Fair-Value Measurements:

We carry trading account assets, investment securities available for sale and various types of derivative financial instruments at fair value in our consolidated statement of condition on a recurring basis. Changes in the fair values of these financial assets and liabilities are recorded either as components of our consolidated statement of income or as components of accumulated other comprehensive income within shareholders' equity in our consolidated statement of

condition.

We measure fair value for the above-described financial assets and liabilities in accordance with GAAP that governs the measurement of the fair value of financial instruments. Management believes that its valuation techniques and underlying assumptions used to measure fair value conform to the provisions of GAAP. We categorize the financial assets and liabilities that we carry at fair value based on a prescribed three-level valuation hierarchy. The hierarchy gives the highest priority to quoted prices in active markets for identical assets or liabilities (level 1) and the lowest priority to valuation methods using significant unobservable inputs (level 3). If the inputs used to measure a financial asset or liability cross different levels of the

55

Table of Contents

STATE STREET CORPORATION

CONDENSED NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)

(UNAUDITED)

hierarchy, categorization is based on the lowest-level input that is most significant to the fair-value measurement. Management's assessment of the significance of a particular input to the overall fair-value measurement of a financial asset or liability requires judgment, and considers factors specific to that asset or liability. The three valuation levels are described below.

Level 1. Financial assets and liabilities with values based on unadjusted quoted prices for identical assets or liabilities in an active market. Fair value is measured using unadjusted quoted prices in active markets for identical securities. Our level-1 financial assets and liabilities primarily include positions in U.S. government securities and highly liquid U.S. and non-U.S. government fixed-income securities. We may carry U.S. government securities in our available-for-sale portfolio in connection with our asset-and-liability management activities. Our level-1 financial assets also include active exchange-traded equity securities.

Level 2. Financial assets and liabilities with values based on quoted prices for similar assets and liabilities in active markets, and inputs that are observable for the asset or liability, either directly or indirectly, for substantially the full term of the asset or liability. Level-2 inputs include the following:

- Quoted prices for similar assets or liabilities in active markets;
- Quoted prices for identical or similar assets or liabilities in non-active markets;
- Pricing models whose inputs are observable for substantially the full term of the asset or liability; and
- Pricing models whose inputs are derived principally from, or corroborated by, observable market information through correlation or other means for substantially the full term of the asset or liability.

Our level-2 financial assets and liabilities primarily include trading account assets and fixed-income investment securities, as well as various types of foreign exchange and interest-rate derivative instruments.

Fair value for our investment securities categorized in level 2 is measured primarily using information obtained from independent third parties. This third-party information is subject to review by management as part of a validation process, which includes obtaining an understanding of the underlying assumptions and the level of market participant information used to support those assumptions. In addition, management compares significant assumptions used by third parties to available market information. Such information may include known trades or, to the extent that trading activity is limited, comparisons to market research information pertaining to credit expectations, execution prices and the timing of cash flows, and where information is available, back-testing.

Derivative instruments categorized in level 2 predominantly represent foreign exchange contracts used in our trading activities, for which fair value is measured using discounted cash-flow techniques, with inputs consisting of observable spot and forward points, as well as observable interest-rate curves. With respect to derivative instruments, we evaluate the impact on valuation of the credit risk of our counterparties and our own credit risk. We consider factors such as the likelihood of default by us and our counterparties, our current and potential future net exposures and remaining maturities in determining the appropriate measurements of fair value. Valuation adjustments associated with derivative instruments were not material to those instruments in the three months ended March 31, 2013 or 2012.

Level 3. Financial assets and liabilities with values based on prices or valuation techniques that require inputs that are both unobservable in the market and significant to the overall measurement of fair value. These inputs reflect management's judgment about the assumptions that a market participant would use in pricing the financial asset or liability, and are based on the best available information, some of which is internally developed. The following provides a more detailed discussion of our financial assets and liabilities that we may categorize in level 3 and the related valuation methodology.

The fair value of our investment securities categorized in level 3 is measured using information obtained from third-party sources, typically non-binding broker or dealer quotes, or through the use of internally-developed pricing models. Management has evaluated its methodologies used to measure fair value, but has considered the level of observable market information to be insufficient to categorize the securities in level 2.

• The fair value of foreign exchange contracts carried in other assets and accrued expenses and other liabilities, primarily options, is measured using an option-pricing model. Because of a limited number of observable transactions,

certain model inputs are not observable, such as implied volatility surface, but are derived from observable market information.

The fair value of certain interest-rate caps with long-dated maturities, also carried in other assets and accrued expenses and other liabilities, is measured using a matrix-pricing approach. Observable market prices are not available for these derivatives, so extrapolation is necessary to value these instruments, since they have a strike and/or maturity outside of the matrix.

Table of Contents

STATE STREET CORPORATION

CONDENSED NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)

(UNAUDITED)

Our level-3 financial assets and liabilities are similar in structure and profile to our level-1 and level-2 financial instruments, but they trade in less-liquid markets, and the measurement of their fair value is inherently more difficult. As of March 31, 2013, on a gross basis, we categorized in level 3 approximately 6% and 2% of our financial assets and liabilities, respectively, carried at fair value on a recurring basis. We generally determine the fair value of our level-3 financial assets and liabilities using pricing information obtained from third-party sources, typically non-binding broker and dealer quotes, and, to a lesser extent, using internally-developed pricing models. The fair value of investment securities categorized in level 3 that was measured using non-binding quotes and internally-developed pricing-model inputs composed approximately 97% and 3%, respectively, of the total fair value of the investment securities categorized in level 3 as of March 31, 2013.

The process used to measure the fair value of our level-3 financial assets and liabilities is overseen by a valuation group within Corporate Finance, independent of the business units that carry the assets and liabilities. This function, which develops and manages the valuation process, reports to State Street's Valuation Committee. The Valuation Committee, composed of senior management from independent business units, Enterprise Risk Management and Corporate Finance, oversees adherence to State Street's valuation policies.

The valuation group performs independent validation of the pricing information obtained from third-party sources in order to evaluate reasonableness and consistency with market experience in similar asset classes. Monthly analyses include a review of price changes relative to overall trends, credit analysis and other relevant procedures (discussed below). In addition, prices for level-3 securities carried in our investment portfolio are tested on a sample basis based on unusual pricing movements. These sample prices are then corroborated through price recalculations, when applicable, using available market information, which is obtained independent of the third-party pricing source. The recalculated prices are compared to market-research information pertaining to credit expectations, execution prices and the timing of cash flows, and where information is available, back-testing. If a difference is identified and it is determined that there is a significant impact requiring an adjustment, a recommendation is presented to the Valuation Committee for review and consideration.

Independent validation is also performed on fair-value measurements determined using internally-developed pricing models. The pricing models are subject to independent validation through our Model Assessment Committee, a corporate risk committee that provides technical recommendations to the Valuation Committee. This validation process incorporates a review of a diverse set of model and trade parameters across a broad range of values in order to evaluate the model's suitability for valuation of a particular financial instrument type, as well as the model's accuracy in reflecting the characteristics of the related financial asset or liability and its significant risks. Inputs and assumptions, including any price-valuation adjustments, are developed by the business units and independently reviewed by the valuation group. Model valuations are compared to available market information including appropriate proxy instruments and other benchmarks to highlight abnormalities for further investigation.

Measuring fair value requires the exercise of management judgment. The level of subjectivity and the degree of management judgment required is more significant for financial instruments whose fair value is measured using inputs that are not observable. The areas requiring significant judgment are identified, documented and reported to the Valuation Committee as part of the valuation control framework. We believe that our valuation methods are appropriate; however, the use of different methodologies or assumptions, particularly as they apply to level-3 financial assets and liabilities, could materially affect fair-value measurements as of the reporting date.

The following tables present information with respect to our financial assets and liabilities carried at fair value in our consolidated statement of condition on a recurring basis as of the dates indicated. No transfers of financial assets or liabilities between levels 1 and 2 occurred during the three months ended March 31, 2013 or the year ended December 31, 2012.

The following table presents quantitative information, as of the dates indicated, about the valuation techniques and significant unobservable inputs used in the valuation of our level-3 financial assets and liabilities measured at fair value on a recurring basis for which we use internally-developed pricing models. The significant unobservable inputs for our level-3 financial assets and liabilities whose fair value is measured using pricing information from non-binding broker or dealer quotes are not included in the table, as the specific inputs applied are not provided by the broker/dealer.

⁽¹⁾ Information with respect to these model-priced financial assets and liabilities is provided in the preceding table.

⁽²⁾ Fair value for these financial assets is measured using non-binding broker or dealer quotes.

Internally-developed pricing models used to measure the fair value of our level-3 financial assets and liabilities incorporate discounted cash-flow and option-modeling techniques. Use of these techniques requires the determination of relevant inputs and assumptions, some of which represent significant unobservable inputs as indicated in the preceding table. Accordingly, changes in these unobservable inputs may have a significant impact on fair value. Certain of these unobservable inputs will, in isolation, have a directionally consistent impact on the fair value of the instrument for a given change in that input. Alternatively, the fair value of the instrument may move in an opposite direction for a given change in another input. Where multiple inputs are used within the valuation technique of an asset or liability, a change in one input in a certain direction may be offset by an opposite change in another input, resulting in a potentially muted impact on the overall fair value of that particular instrument. Additionally, a change in one unobservable input may result in a change to another unobservable input (that is, changes in certain inputs are interrelated to one another), which may counteract or magnify the fair-value impact.

For recurring level-3 fair-value measurements for which significant unobservable inputs are readily available to State Street as of March 31, 2013, the sensitivity of the fair-value measurement to changes in significant unobservable inputs, and a description of any interrelationships between those unobservable inputs, is described below; however, we rarely experience a situation in which those unobservable inputs change in isolation:

• The significant unobservable input used in the measurement of the fair value of our asset-backed securities and investment securities issued by state and political subdivisions is the credit spread. Significant increases (decreases) in

the credit spread would result in measurements of significantly lower (higher) fair value.

The significant unobservable inputs used in the measurement of the fair value of our other non-U.S. debt securities, specifically securities collateralized by sovereign-trade credit obligations, are discount rates, expected recovery and expected maturity. Significant increases (decreases) in the discount rate and the expected maturity in isolation would result in measurements of significantly lower (higher) fair value. A significant increase (decrease) in the expected recovery would result in measurements of significantly higher (lower) fair value. However, a change in the discount rate plays a much more significant role in the measurement of fair value.

The significant unobservable input used in the measurement of the fair value of our foreign exchange option contracts is the implied volatility surface. A significant increase (decrease) in the implied volatility surface would result in measurements of significantly higher (lower) fair value.

Table of Contents

STATE STREET CORPORATION

CONDENSED NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)

(UNAUDITED)

The significant unobservable input used in the measurement of the fair value of our other derivative instruments, specifically stable value wrap contracts, is participant redemptions. Increased volatility of redemptions may result in changes to the measurement of fair value. Generally, significant increases (decreases) in participant redemptions may result in measurements of significantly higher (lower) fair value of this liability.

Fair Values of Financial Instruments:

Estimates of fair value for financial instruments not carried at fair value on a recurring basis in our consolidated statement of condition, as defined by GAAP, are generally subjective in nature, and are made as of a specific point in time based on the characteristics of the financial instruments and relevant market information. Disclosure of fair-value estimates is not required by GAAP for certain items, such as lease financing, equity-method investments, obligations for pension and other post-retirement plans, premises and equipment, other intangible assets and income-tax assets and liabilities. Accordingly, aggregate fair-value estimates presented do not purport to represent, and should not be considered representative of, our underlying “market” or franchise value. In addition, because of potential differences in methodologies and assumptions used to estimate fair values, our estimates of fair value should not be compared to those of other financial institutions.

We use the following methods to estimate the fair values of our financial instruments:

For financial instruments that have quoted market prices, those quoted prices are used to estimate fair value.

For financial instruments that have no defined maturity, have a remaining maturity of 180 days or less, or repriced frequently to a market rate, we assume that the fair value of these instruments approximates their reported value, after taking into consideration any applicable credit risk.

For financial instruments for which no quoted market prices are available, fair value is estimated using information obtained from independent third parties, or by discounting the expected cash flows using an estimated current market interest rate for the financial instrument.

The generally short duration of certain of our assets and liabilities results in a significant number of financial instruments for which fair value equals or closely approximates the amount reported in our consolidated statement of condition. These financial instruments are reported in the following captions in our consolidated statement of condition: cash and due from banks; interest-bearing deposits with banks; securities purchased under resale agreements; accrued income receivable; deposits; securities sold under repurchase agreements; federal funds purchased; and other short-term borrowings. In addition, due to the relatively short duration of certain of our net loans (excluding leases), we consider fair value for these loans to approximate their reported value. The fair value of other types of loans, such as purchased receivables and commercial real estate loans, is estimated by discounting expected future cash flows using current rates at which similar loans would be made to borrowers with similar credit ratings for the same remaining maturities. Loan commitments have no reported value because their terms are at prevailing market rates.

The following tables present the reported amounts and estimated fair values of the financial instruments defined by GAAP, excluding financial assets and liabilities carried at fair value on a recurring basis, as they would be categorized within the fair-value hierarchy as of the dates indicated.

Beginning balance	\$124	\$113
Plus losses for which other-than-temporary impairment was not previously recognized	—	1
Plus losses for which other-than-temporary impairment was previously recognized	3	7
Less previously recognized losses related to securities sold	—	(20)
Ending balance	\$127	\$101

Impairment:

We conduct periodic reviews of individual securities to assess whether other-than-temporary impairment exists. Impairment exists when the current fair value of an individual security is below its amortized cost basis. When the decline in the security's fair value is deemed to be other than temporary, the loss is recorded in our consolidated statement of income. In addition, for debt securities available for sale and held to maturity, impairment is recorded in our consolidated statement of income when management intends to sell (or may be required to sell) the securities before they recover in value, or when management expects the present value of cash flows expected to be collected from the securities to be less than the amortized cost of the impaired security (a credit loss).

Our review of impaired securities generally includes:

- the identification and evaluation of securities that have indications of potential other-than-temporary impairment, such as issuer-specific concerns, including deteriorating financial condition or bankruptcy;
- the analysis of expected future cash flows of securities, based on quantitative and qualitative factors;
- the analysis of the collectibility of those future cash flows, including information about past events, current conditions and reasonable and supportable forecasts;
- the analysis of the underlying collateral for mortgage- and asset-backed securities;
- the analysis of individual impaired securities, including consideration of the length of time the security has been in an unrealized loss position, the anticipated recovery period, and the magnitude of the overall price decline;
- discussion and evaluation of factors or triggers that could cause individual securities to be deemed other-than-temporarily impaired and those that would not support other-than-temporary impairment; and
- documentation of the results of these analyses.

Table of Contents

STATE STREET CORPORATION

CONDENSED NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)

(UNAUDITED)

Factors considered in determining whether impairment is other than temporary include:

- certain macroeconomic drivers;
- certain industry-specific drivers;
- the length of time the security has been impaired;
- the severity of the impairment;
- the cause of the impairment and the financial condition and near-term prospects of the issuer;
- activity in the market with respect to the issuer's securities, which may indicate adverse credit conditions; and
- our intention not to sell, and the likelihood that we will not be required to sell, the security for a period of time sufficient to allow for recovery in value.

Substantially all of our investment securities portfolio is composed of debt securities. A critical component of the evaluation of other-than-temporary impairment of these debt securities is the identification of credit-impaired securities for which management does not expect to receive cash flows sufficient to recover the entire amortized cost basis of the security.

Debt securities that are not deemed to be credit-impaired are subject to additional management analysis to assess whether management intends to sell, or, more likely than not, would be required to sell, the security before the expected recovery to its amortized cost basis.

The following describes our process for identifying credit impairment in security types with the most significant unrealized losses as of March 31, 2013.

U.S. Non-Agency Residential Mortgage-Backed Securities

For U.S. non-agency residential mortgage-backed securities, other-than-temporary impairment related to credit is assessed using cash-flow models, tailored for each security, that estimate the future cash flows from the underlying mortgages, using the security-specific collateral and transaction structure. Estimates of future cash flows are subject to management judgment. The future cash flows and performance of our portfolio of U.S. mortgage-backed securities are a function of a number of factors, including, but not limited to, the condition of the U.S. economy, the condition of the U.S. residential mortgage markets, and the level of loan defaults, prepayments and loss severities. Management's estimates of future losses for each security also consider the underwriting and historical performance of each specific security, the underlying collateral type, vintage, borrower profile, third-party guarantees, current levels of subordination, geography and other factors.

We recorded no other-than-temporary impairment on these securities in our consolidated statement of income in the three months ended March 31, 2013. Such impairment losses were \$4 million, all associated with expected credit losses, in the three months ended March 31, 2012.

Asset-Backed Securities - Student Loans

Asset-backed securities collateralized by student loans are primarily composed of securities collateralized by Federal Family Education Loan Program, or FFELP, loans. FFELP loans benefit from a federal government guarantee of at least 97% of defaulted principal and accrued interest, with additional credit support provided in the form of overcollateralization, subordination and excess spread, which collectively total in excess of 100%. Accordingly, the vast majority of FFELP loan-backed securities are protected from traditional consumer credit risk.

The gross unrealized losses in our FFELP loan-backed securities portfolio as of March 31, 2013 were primarily attributable to lower liquidity and the lower spreads on these securities relative to those associated with more current issuances. When evaluating impairment of these securities, we consider, among many other factors, the strength of the U.S. government guarantee, the performance of the underlying collateral, and the remaining average term of the FFELP loan-backed securities portfolio, which was approximately 5.1 years as of March 31, 2013. In addition, our total exposure to private student loan-backed securities was less than \$900 million as of March 31, 2013. Our evaluation of impairment of these securities considers, among other factors, the impact of high unemployment rates on the collateral performance of private student loans.

Non-U.S. Mortgage- and Asset-Backed Securities

Non-U.S. mortgage- and asset-backed securities are primarily composed of U.K., Australian and Netherlands securities collateralized by residential mortgages. Our evaluation of impairment considers the location of the underlying collateral, collateral enhancement and structural features, expected credit losses under base-case and stressed conditions and the macroeconomic outlook for the country in which the collateral is located, including housing prices and unemployment. Where

73

Table of Contents

STATE STREET CORPORATION

CONDENSED NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)

(UNAUDITED)

appropriate, any potential loss after consideration of the above-referenced factors is further evaluated to determine whether any other-than-temporary impairment exists.

In the three months ended March 31, 2013, we recorded other-than-temporary impairment of \$3 million related to non-U.S. mortgage-backed securities associated with adverse changes in the timing of expected future cash flows from the securities. During the three months ended March 31, 2012, we recorded other-than-temporary impairment of \$4 million, substantially related to non-U.S. mortgage-backed securities, all associated with adverse changes in the timing of expected future cash flows from the securities.

Our aggregate exposure to Spain, Italy, Ireland and Portugal totaled approximately \$563 million as of March 31, 2013. We had no direct sovereign-debt exposure to any of these countries as of that date, but we had indirect exposure consisting of mortgage- and asset-backed securities, composed of \$264 million in Spain, \$114 million in Italy, \$110 million in Ireland and \$75 million in Portugal. These securities had an aggregate pre-tax gross unrealized loss of approximately \$29 million as of March 31, 2013. We recorded no other-than-temporary impairment on these securities in the three months ended March 31, 2013 or the three months ended March 31, 2012.

Our evaluation of potential other-than-temporary impairment of these securities takes into account government intervention in the corresponding mortgage markets and assumes a negative baseline macroeconomic environment for this region, due to a combination of slower economic growth and continued government austerity measures. Our baseline view assumes a recessionary period characterized by higher unemployment and by additional housing price declines of between 10% and 19% across these four countries. Our evaluation of other-than-temporary impairment in our base case does not assume a disorderly sovereign-debt restructuring or a break-up of the Eurozone. In addition, stress testing and sensitivity analysis is performed in order to understand the impact of more severe assumptions on potential other-than-temporary impairment.

State and Political Subdivisions

In assessing other-than-temporary impairment of these securities, we may from time to time rely on support from third-party financial guarantors for certain asset-backed and municipal (state and political subdivisions) securities. Factors considered when determining the level of support include the guarantor's credit rating and management's assessment of the guarantor's financial condition. For those guarantors that management deems to be under financial duress, we assume an immediate default by those guarantors, with a modest recovery of claimed amounts (up to 20%). In addition, for various forms of collateralized securities, management considers the liquidation value of the underlying collateral based on expected housing prices and other relevant factors.

The estimates, assumptions and other risk factors utilized in our evaluation of impairment as described above are used by management to identify securities which are subject to further analysis of potential credit losses. Additional analyses are performed using more severe assumptions to further evaluate the sensitivity of losses relative to the above-described factors. However, since the assumptions are based on the unique characteristics of each security, management uses a range of point estimates for prepayment speeds and housing prices that reflect the collateral profile of the securities within each asset class. In addition, in measuring expected credit losses, the individual characteristics of each security are examined to determine whether any additional factors would increase or mitigate the expected loss. Once losses are determined, the timing of the loss will also affect the ultimate other-than-temporary impairment, since the loss is ultimately subject to a discount commensurate with the purchase yield of the security. In the aggregate, we recorded other-than-temporary impairment of \$3 million in the three months ended March 31, 2013, compared to \$8 million in the three months ended March 31, 2012, respectively. The \$3 million recorded in the three months ended March 31, 2013 resulted from adverse changes in the timing of expected future cash flows from the securities. Of the \$8 million recorded in the three months ended March 31, 2012, \$4 million related to expected credit losses, and \$4 million resulted from adverse changes in the timing of expected future cash flows from the securities.

After a review of the investment portfolio, taking into consideration current economic conditions, adverse situations that might affect our ability to fully collect principal and interest, the timing of future payments, the credit quality and performance of the collateral underlying mortgage- and asset-backed securities and other relevant factors, and excluding other-than-temporary impairment recorded in the three months ended March 31, 2013, management considers the aggregate decline in fair value of the investment securities portfolio and the resulting gross pre-tax unrealized losses of \$753 million related to 1,423 securities as of March 31, 2013 to be temporary, and not the result of any material changes in the credit characteristics of the securities.

Total	\$10,561	\$1,531	\$347	\$1,137	\$375	\$34	\$13,985
December 31, 2012 (In millions)	Institutional				Commercial Real Estate		Total Loans and Leases
	Investment Funds	Commercial and Financial	Purchased Receivables	Lease Financing	Property Development	Other	
Investment grade	\$8,937	\$1,041	\$394	\$1,137	\$—	\$29	\$11,538
Speculative	268	92	—	27	377	5	769
Total	\$9,205	\$1,133	\$394	\$1,164	\$377	\$34	\$12,307

Loans and leases are categorized in the rating categories presented in the table above that align with our internal risk-rating framework. Management considers the ratings to be current as of March 31, 2013. We use an internal risk-rating system to assess our risk of credit loss for each loan or lease. This risk-rating process incorporates the use of risk-rating tools in

75

Table of Contents

STATE STREET CORPORATION

CONDENSED NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)

(UNAUDITED)

conjunction with management judgment. Qualitative and quantitative inputs are captured in a systematic manner, and following a formal review and approval process, an internal credit rating based on our credit scale is assigned.

In assessing the risk rating assigned to each individual loan or lease, among the factors considered are the borrower's debt capacity, collateral coverage, payment history and delinquency experience, financial flexibility and earnings strength, the expected amounts and sources of repayment, the level and nature of contingencies, if any, and the industry and geography in which the borrower operates. These factors are based on an evaluation of historical and current information, and involve subjective assessment and interpretation. Credit counterparties are evaluated and risk-rated on an individual basis at least annually.

The following table presents our recorded investment in loans and leases, disaggregated based on our impairment methodology, as of the dates indicated:

(In millions)	March 31, 2013			December 31, 2012		
	Institutional	Commercial Real Estate	Total Loans and Leases	Institutional	Commercial Real Estate	Total Loans and Leases
Loans and leases:						
Individually evaluated for impairment	\$10	\$380	\$390	\$11	\$411	\$422
Collectively evaluated for impairment ⁽¹⁾	13,566	29	13,595	11,885	—	11,885
Total	\$13,576	\$409	\$13,985	\$11,896	\$411	\$12,307

⁽¹⁾ As of both March 31, 2013 and December 31, 2012, the entire \$22 million allowance for loan losses was related to institutional loans collectively evaluated for impairment.

The following tables present information related to our recorded investment in impaired loans and leases as of the dates, or for the periods, indicated:

(In millions)	March 31, 2013			December 31, 2012		
	Recorded Investment	Unpaid Principal Balance	Related Allowance ⁽¹⁾	Recorded Investment	Unpaid Principal Balance	Related Allowance ⁽¹⁾

With an allowance recorded:				
CRE—other—acquired credit-impaired	—	31	—	—

Total CRE	\$195	\$238	\$4	\$5
-----------	-------	-------	-----	-----

As of both March 31, 2013 and December 31, 2012, we held an aggregate of approximately \$195 million and \$197 million, respectively, of commercial real estate, or CRE, loans which were modified in troubled debt restructurings. No impairment loss was recognized upon restructuring of the loans, as the discounted cash flows of the modified loans exceeded the carrying amount of the original loans as of the modification date. During the three months ended March 31, 2013 and the year ended December 31, 2012, no loans were modified in troubled debt restructurings.

Total	\$21,285	\$18,016

⁽¹⁾ Included other real estate owned of approximately \$56 million and \$65 million, respectively.

Note 7. Commitments, Guarantees and Contingencies

Commitments:

We had unfunded off-balance sheet commitments to extend credit totaling \$18.28 billion and \$17.86 billion as of March 31, 2013 and December 31, 2012, respectively. The potential losses associated with these commitments equal the gross contractual amounts, and do not consider the value of any collateral. Approximately 77% of our unfunded commitments to extend credit expire within one year from the date of issue. Since many of these commitments are expected to expire or renew without being drawn upon, the gross contractual amounts do not necessarily represent future cash requirements.

Guarantees:

Off-balance sheet guarantees are composed of indemnified securities financing, stable value protection, unfunded commitments to purchase assets, and standby letters of credit. The potential losses associated with these guarantees equal the gross contractual amounts, and do not consider the value of any collateral. The following table presents the aggregate gross contractual amounts of off-balance sheet guarantees as of the dates indicated. Amounts presented do not reflect participations to independent third parties.

(In millions)	March 31, 2013	December 31, 2012
Indemnified securities financing	\$314,940	\$302,341
Stable value protection	32,171	33,512
Asset purchase agreements	4,549	5,063
Standby letters of credit	4,565	4,552
Indemnified Securities Financing		

On behalf of our clients, we lend their securities, as agent, to brokers and other institutions. In most circumstances, we indemnify our clients for the fair market value of those securities against a failure of the borrower to return such securities. We require the borrowers to maintain collateral in an amount equal to or in excess of 100% of the fair market value of the securities borrowed. Securities on loan are revalued daily to determine if additional collateral is necessary. Collateral received in connection with our securities lending services is held by us as agent and is not recorded in our consolidated statement of condition.

The collateral held by us as agent is invested on behalf of our clients. In certain cases, the collateral is invested in third-party repurchase agreements, for which we indemnify the client against loss of the principal invested. We require the

78

Table of Contents

STATE STREET CORPORATION

CONDENSED NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)

(UNAUDITED)

counterparty to the indemnified repurchase agreement to provide collateral in an amount equal to or in excess of 100% of the amount of the repurchase obligation. In our role as agent, the indemnified repurchase agreements and the related collateral held by us are not recorded in our consolidated statement of condition.

The following table summarizes the fair values of indemnified securities financing and related collateral, as well as collateral invested in indemnified repurchase agreements, as of the dates indicated:

(In millions)	March 31, 2013	December 31, 2012
Aggregate fair value of indemnified securities financing	\$314,940	\$302,341
Aggregate fair value of cash and securities held by us, as agent, as collateral for indemnified securities financing	327,948	312,223
Aggregate fair value of collateral for indemnified securities financing invested in indemnified repurchase agreements	89,185	80,224
Aggregate fair value of cash and securities held by us or our agents as collateral for indemnified repurchase agreements	94,549	85,411

In certain cases, we participate in securities finance transactions as a principal. As principal, we borrow securities from the lending client and then lend such securities to the subsequent borrower, either a State Street client or a broker/dealer. Collateral provided and received in connection with such transactions is recorded in other assets and accrued expenses and other liabilities, respectively, in our consolidated statement of condition. As of March 31, 2013 and December 31, 2012, we had approximately \$9.09 billion and \$6.83 billion, respectively, of collateral provided and approximately \$7.11 billion and \$4.99 billion, respectively, of collateral received in connection with our principal securities lending transactions.

Stable Value Protection

In the normal course of our business, we offer products that provide book-value protection, primarily to plan participants in stable value funds managed by non-affiliated investment managers of post-retirement defined contribution benefit plans, particularly 401(k) plans. The book-value protection is provided on portfolios of intermediate, investment grade fixed-income securities, and is intended to provide safety and stable growth of principal invested. The protection is intended to cover any shortfall in the event that a significant number of plan participants withdraw funds when book value exceeds market value and the liquidation of the assets is not sufficient to redeem the participants. The investment parameters of the underlying portfolios, combined with structural protections, are designed to provide cushion and guard against payments even under extreme stress scenarios.

These contingencies are individually accounted for as derivative financial instruments. The notional amounts of these contingencies are presented as “derivatives not designated as hedging instruments” in the table of aggregate notional amounts of derivative financial instruments provided in note 10. As of March 31, 2013, we have not made a payment under these contingencies that we consider material to our consolidated financial condition, and management believes that the probability of payment under these contingencies in the future, that we would consider material to our consolidated financial condition, is remote.

Contingencies:**Legal Proceedings**

In the ordinary course of business, we and our subsidiaries are involved in disputes, litigation and regulatory inquiries and investigations, both pending and threatened. These matters, if resolved adversely against us, may result in monetary damages, fines and penalties or require changes in our business practices. The resolution of these matters is inherently difficult to predict. Based on our assessment of these pending matters, we do not believe that the amount of any judgment, settlement or other action arising from any pending matter is likely to have a material adverse effect on our consolidated financial condition. However, an adverse outcome in certain of the matters described below could have a material adverse effect on our consolidated results of operations for the period in which such matter is resolved or a reserve is determined to be required, on our consolidated financial condition or on our reputation.

We evaluate our needs for accruals of loss contingencies related to legal proceedings on a case-by-case basis. When we have a liability that we deem probable and can be reasonably estimated as of the date of our consolidated financial statements, we accrue for our estimate of the loss. Once established, a reserve is subject to subsequent adjustment as a result of additional information. The resolution of proceedings and a range of reasonably estimable loss are inherently difficult to predict, especially in the early stages of proceedings. Even if a loss is probable, due to many complex factors, such as speed of discovery and the timing of court decisions or rulings, a range of loss might not be reasonably estimated until the later stages of the proceeding.

Table of Contents

STATE STREET CORPORATION

CONDENSED NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)

(UNAUDITED)

To the extent that we have established reserves in our consolidated statement of condition for probable loss contingencies, such reserves may not be sufficient to cover our ultimate financial exposure associated with any settlements or judgments. We may be subject to proceedings in the future that, if adversely resolved, would have a material adverse effect on our businesses or on our future consolidated financial statements. Except where otherwise noted below, we have not established reserves with respect to the claims discussed and do not believe that potential exposure is either probable or can be reasonably estimated.

SSgA

We are currently defending two related ERISA class actions by investors in unregistered SSgA-managed collective trust funds and common trust funds which challenge the division of our securities lending-related revenue between those funds and State Street in its role as lending agent. The first action alleges, among other things, that State Street breached its fiduciary duty to investors in those funds. The plaintiff contends that other State Street agency lending clients received more favorable fee splits than did the SSgA lending funds. In August 2012, the Court certified a class consisting of ERISA plans that invested in SSgA collective trust funds between April 2004 and the present. We have not established a reserve with respect to this matter. The second action, filed in January 2013, challenges the division of our securities lending-related revenue between common trust funds and State Street in its role as lending agent. It alleges, among other things, that State Street breached its fiduciary duty under ERISA and state common law to investors in those funds.

Securities Finance

Two related participants in our agency securities lending program have brought suit against us challenging actions taken by us in response to their withdrawal from the program. We believe that certain withdrawals by these participants were inconsistent with the redemption policy applicable to the agency lending collateral pools and, consequently, redeemed their remaining interests through an in-kind distribution that reflected the assets these participants would have received had they acted in accordance with the collateral pools' redemption policy. The participants have asserted damages of \$120 million, an amount that plaintiffs have stated was the difference between the amortized cost and market value of the assets that State Street proposed to distribute to the plans in-kind on or about August 2009. While management does not believe that such difference is an appropriate measure of damages, as of September 30, 2010, the last date on which State Street acted as custodian for the participants, the difference between the amortized cost and market value of the in-kind distribution was approximately \$49 million, and if such securities were still held by the participants on such date, the difference would have been approximately \$10 million as of March 31, 2013. In taking these actions, we believe that we acted in the best interests of all participants in the collateral pools. We have established a reserve of \$10 million in connection with this matter.

Foreign Exchange

We offer our custody clients and their investment managers the option to route foreign exchange transactions to our foreign exchange desk through our asset servicing operation. We record as revenue an amount approximately equal to the difference between the rates we set for those trades and indicative interbank market rates at the time of settlement of the trade. As discussed more fully below, claims have been asserted on behalf of certain current and former custody clients, and future claims may be asserted, alleging that our indirect foreign exchange rates (including the differences between those rates and indicative interbank market rates at the time we executed the trades) were not adequately disclosed or were otherwise improper, and seeking to recover, among other things, the full amount of the revenue we obtained from our indirect foreign exchange trading with them.

In October 2009, the Attorney General of the State of California commenced an action under the California False Claims Act and California Business and Professional Code related to services State Street provides to California state pension plans. The California Attorney General asserts that the pricing of certain foreign exchange transactions for these pension plans was governed by the custody contracts for these plans and that our pricing was not consistent with the terms of those contracts and related disclosures to the plans, and that, as a result, State Street made false claims and engaged in unfair competition. The Attorney General asserts actual damages of approximately \$100 million for

periods from 2001 to 2009 and seeks additional penalties, including treble damages. This action is in the discovery phase.

In October 2010, we entered into a \$12 million settlement with the State of Washington. This settlement resolves a contract dispute related to the manner in which we priced some foreign exchange transactions during our ten-year relationship with the State of Washington. Our contractual obligations and related disclosures to the State of Washington were significantly different from those presented in our ongoing litigation in California.

We provide custody and principal foreign exchange services to government pension plans in other jurisdictions. Since the commencement of the litigation in California, attorneys general and other governmental authorities from a number of jurisdictions, as well as U.S. Attorney's offices, the U.S. Department of Labor and the SEC, have requested information or

Table of Contents

STATE STREET CORPORATION

CONDENSED NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)

(UNAUDITED)

issued subpoenas in connection with inquiries into the pricing of our foreign exchange services. We continue to respond to such inquiries and subpoenas.

We offer indirect foreign exchange services such as those we offer to the California pension plans to a broad range of custody clients in the U.S. and internationally. We have responded and are responding to information requests from a number of clients concerning our indirect foreign exchange rates. In February 2011, a putative class action was filed in federal court in Boston seeking unspecified damages, including treble damages, on behalf of all custodial clients that executed certain foreign exchange transactions with State Street from 1998 to 2009. The putative class action alleges, among other things, that the rates at which State Street executed foreign currency trades constituted an unfair and deceptive practice under Massachusetts law and a breach of the duty of loyalty.

Two other putative class actions are currently pending in federal court in Boston alleging various violations of ERISA on behalf of all ERISA plans custodied with us that executed indirect foreign exchange transactions with State Street from 1998 onward. The complaints allege that State Street caused class members to pay unfair and unreasonable rates for indirect foreign exchange transactions with State Street. The complaints seek unspecified damages, disgorgement of profits, and other equitable relief.

We have not established a reserve with respect to any of the pending legal proceedings related to our indirect foreign exchange services. We cannot provide any assurance as to the outcome of the pending proceedings, or whether other proceedings might be commenced against us by clients or government authorities. We expect that plaintiffs will seek to recover their share of all or a portion of the revenue that we have recorded from providing indirect foreign exchange services.

Our estimated total revenue worldwide from such services was approximately \$65 million for the three months ended March 31, 2013, approximately \$248 million for the year ended December 31, 2012, approximately \$331 million for the year ended December 31, 2011, approximately \$336 million for the year ended December 31, 2010, approximately \$369 million for the year ended December 31, 2009 and approximately \$462 million for the year ended December 31, 2008. Although we did not calculate revenue for such services prior to 2006 in the same manner, and have refined our calculation method over time, we believe that the amount of our revenue for such services has been of a similar or lesser order of magnitude for many years. Our revenue calculations related to indirect foreign exchange services reflect a judgment concerning the relationship between the rates we charge for indirect foreign exchange execution and indicative interbank market rates near in time to execution. Our revenue from foreign exchange trading generally depends on the difference between the rates we set for indirect trades and indicative interbank market rates on the date trades settle.

We cannot predict the outcome of any pending matters or whether a court, in the event of an adverse resolution, would consider our revenue to be the appropriate measure of damages.

Shareholder Litigation

Four shareholder-related complaints are currently pending in federal court in Boston. One complaint purports to be a class action on behalf of State Street shareholders. A second complaint is a purported shareholder derivative action on behalf of State Street. The two other complaints purport to be class actions on behalf of participants and beneficiaries in the State Street Salary Savings Program who invested in the program's State Street common stock investment option. The complaints variously allege violations of the federal securities laws, common law and ERISA in connection with our foreign exchange trading business, our investment securities portfolio and our asset-backed commercial paper conduit program. We have not established a reserve with respect to these matters.

Transition Management

In 2011, we identified a limited number of instances in which clients of our U.K. transition management businesses had been intentionally charged amounts in excess of the contractual terms. We conducted an investigation of such business with the assistance of external counsel and accounting firms; and we notified and have reimbursed or offered to reimburse the limited number of clients which we identified as having been intentionally overcharged. We have also reported this matter to the U.K. Financial Services Authority, or FSA, and have cooperated with them in

connection with this matter. We have established reserves in an aggregate amount of \$10 million for indemnification costs and the potential for a financial penalty in connection with a resolution of this matter with the FSA.

Investment Servicing

State Street is named as a defendant in a series of related complaints by investment management clients of TAG Virgin Islands, Inc., or TAG, who hold custodial accounts with State Street. The complaints, collectively, allege various claims in connection with certain assets managed by TAG and custodied with State Street. The complaints included a consolidated putative class action complaint which was dismissed in March 2013 without prejudice to the plaintiff's ability to file a new complaint. We have not established a reserve with respect to these matters.

STATE STREET CORPORATION

CONDENSED NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)

(UNAUDITED)

Income Taxes

In the normal course of our business, we are subject to challenges from U.S. and non-U.S. income tax authorities regarding the amount of income taxes due. These challenges may result in adjustments to the timing or amount of taxable income or deductions or the allocation of taxable income among tax jurisdictions. Unrecognized tax benefits totaled approximately \$95 million as of both March 31, 2013 and December 31, 2012.

The Internal Revenue Service, or IRS, is currently reviewing our U.S. income tax returns for the tax years 2010 and 2011. Management believes that we have sufficiently accrued liabilities as of March 31, 2013 for tax exposures, including, but not limited to, exposures related to the review by the IRS of the tax years 2010 and 2011.

Note 8. Variable Interest Entities

Asset-Backed Investment Securities:

We invest in various forms of asset-backed securities, which we carry in our investment securities portfolio. These asset-backed securities meet the GAAP definition of asset securitization entities, which entities are considered to be VIEs as defined by GAAP. We are not considered to be the primary beneficiary of these VIEs, as defined by GAAP, since we do not have control over their activities. Additional information about our asset-backed securities is provided in note 3.

Tax-Exempt Investment Program:

In the normal course of our business, we structure and sell certificated interests in pools of tax-exempt investment-grade assets, principally to our mutual fund clients. We structure these pools as partnership trusts, and the assets and liabilities of the trusts are recorded in our consolidated statement of condition as investment securities available for sale and other short-term borrowings. We may also provide liquidity and re-marketing services to the trusts. As of March 31, 2013 and December 31, 2012, we carried investment securities available for sale, composed of securities related to state and political subdivisions, with a fair value of \$2.63 billion and \$2.68 billion, respectively, and other short-term borrowings of \$2.12 billion and \$2.15 billion, respectively, in our consolidated statement of condition in connection with these trusts.

We transfer assets to the trusts from our investment securities portfolio at adjusted book value, and the trusts finance the acquisition of these assets by selling certificated interests issued by the trusts to third-party investors and to State Street as residual holder. These transfers do not meet the de-recognition criteria defined by GAAP, and therefore, are recorded in our consolidated financial statements. The trusts had a weighted-average life of approximately 6.7 years as of March 31, 2013, compared to approximately 6.9 years as of December 31, 2012.

Under separate legal agreements, we provide standby bond-purchase agreements to these trusts and, with respect to certain securities, letters of credit. Our commitments to the trusts under these standby bond-purchase agreements and letters of credit totaled \$2.16 billion and \$666 million, respectively, as of March 31, 2013, none of which was utilized at period-end. In the event that our obligations under these agreements are triggered, no material impact to our consolidated results of operations or financial condition is expected to occur, because the securities are already recorded at fair value in our consolidated statement of condition.

Note 9. Shareholders' Equity

In March 2013, our Board of Directors approved a new program authorizing the purchase by us of up to \$2.10 billion of our common stock through March 31, 2014. No shares were purchased by us under this program during the three months ended March 31, 2013. During the three months ended March 31, 2013, we purchased approximately 6.5 million shares of our common stock at an average cost of \$54.95 per share and an aggregate cost of approximately \$360 million, under a previous program approved by the Board in March 2012. As of March 31, 2013, no shares remained available for purchase under the March 2012 program. Shares acquired in connection with the March 2012 program which remained unissued as of March 31, 2013 were recorded as treasury stock in our consolidated statement of condition as of March 31, 2013.

CONDENSED NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)

(UNAUDITED)

The following table presents the after-tax components of accumulated other comprehensive income (loss), or AOCI, as of the dates indicated:

(In millions)	March 31, 2013	December 31, 2012
Foreign currency translation	\$(114) \$134
Net unrealized losses on hedges of net investments in non-U.S. subsidiaries	(14) (14)
Net unrealized gains on available-for-sale securities portfolio	849	815
Net unrealized losses related to reclassified available-for-sale securities	(97) (110)
Net unrealized gains on available-for-sale securities	752	705
Net unrealized losses on available-for-sale securities designated in fair value hedges	(168) (183)
Other-than-temporary impairment on available-for-sale securities related to factors other than credit	1	(3)
Other-than-temporary impairment on held-to-maturity securities related to factors other than credit	(59) (65)
Net unrealized gains on cash flow hedges	133	69
Unrealized losses on retirement plans	(280) (283)
Total	\$251	\$360

Table of Contents

STATE STREET CORPORATION

CONDENSED NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)

(UNAUDITED)

The following table presents changes in AOCI by component, net of related taxes, in the three months ended March 31, 2013:

(In millions)	Three Months Ended March 31, 2013							Total
	Net Unrealized Gains (Losses) on Cash Flow Hedges	Net Unrealized Gains (Losses) on Available for Sale Securities	Net Unrealized Losses on Hedges of Net Investments in Non-U.S. Subsidiaries	Net Unrealized Gains (Losses) on Held to Maturity Securities	Unrealized Losses on Retirement Plans	Foreign Currency Translation		
Beginning balance	\$69	\$519	\$ (14)	\$ (65)	\$ (283)	\$ 134	\$360	
Other comprehensive income (loss) before reclassifications	63	69	—	4	(2)	(248)	(114)	
Amounts reclassified out of AOCI	1	(3)	—	2	5	—	5	
Other comprehensive income (loss)	64	66	—	6	3	(248)	(109)	
Ending balance	\$133	\$585	\$ (14)	\$ (59)	\$ (280)	\$ (114)	\$251	

The following table presents reclassifications out of AOCI in the three months ended March 31, 2013:

(In millions)	Amount Reclassified out of AOCI	Affected Line Item in Consolidated Statement of Income
Cash flow hedges:		
Interest-rate contracts	\$1	Net interest revenue
Available-for-sale securities:		
Net realized gains from sales of available-for-sale securities, net of related taxes of (\$2)	(3)	Net gains (losses) from sales of available-for-sale securities
Held-to-maturity securities:		
Other-than-temporary impairment on held-to-maturity securities related to factors other than credit, net of related taxes of \$1	2	Losses reclassified (from) to other comprehensive income
Retirement plans:		
Amortization of actuarial losses, net of related taxes of \$3	5	Compensation and employee benefits expense
Total reclassifications out of AOCI	\$5	

In the three months ended March 31, 2013, we realized net gains of \$5 million, or \$3 million net of related taxes as presented in the table above, from sales of available-for-sale securities. Unrealized pre-tax losses of \$49 million were included in AOCI as of December 31, 2012, net of deferred taxes of \$20 million, related to these sales. In the three months ended March 31, 2012, we realized net gains of \$19 million from sales of available-for-sale securities. Unrealized pre-tax gains of \$22 million were included in AOCI as of December 31, 2011, net of deferred taxes of \$9 million, related to these sales.

Note 10. Derivative Financial Instruments

We use derivative financial instruments to support our clients' needs and to manage our interest-rate and currency risk. In undertaking these activities, we assume positions in both the foreign exchange and interest-rate markets by buying

and selling cash instruments and using derivative financial instruments, including foreign exchange forward contracts, foreign exchange and interest-rate options and interest-rate swaps, interest-rate forward contracts and interest-rate futures.

Interest-rate contracts involve an agreement with a counterparty to exchange cash flows based on the movement of an underlying interest-rate index. An interest-rate swap agreement involves the exchange of a series of interest payments, at either a fixed or variable rate, based on the notional amount without the exchange of the underlying principal amount. An interest-rate option contract provides the purchaser, for a premium, the right, but not the obligation, to receive an interest rate based upon a predetermined notional amount during a specified period. An interest-rate futures contract is a commitment to buy or sell, at a future date, a financial instrument at a contracted price; it may be settled in cash or through the delivery of the contracted instrument.

Table of Contents

STATE STREET CORPORATION

CONDENSED NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)

(UNAUDITED)

Foreign exchange contracts involve an agreement to exchange one currency for another currency at an agreed-upon rate and settlement date. Foreign exchange contracts generally consist of foreign exchange forward and spot contracts, option contracts and cross-currency swaps. Future cash requirements, if any, related to foreign exchange contracts are represented by the gross amount of currencies to be exchanged under each contract unless we and the counterparty have agreed to pay or to receive the net contractual settlement amount on the settlement date.

Derivative financial instruments involve the management of interest-rate and foreign currency risk, and involve, to varying degrees, market risk and credit and counterparty risk (risk related to repayment). Market risk is defined by U.S. banking regulators as the risk of loss that could result from broad market movements, such as changes in the general level of interest rates, credit spreads, foreign exchange rates or commodity prices. We use a variety of risk management tools and methodologies to measure, monitor and manage the market risk associated with our trading activities. One such risk-management measure is Value-at-Risk, or VaR. VaR is an estimate of potential loss for a given period within a stated statistical confidence interval. We use a risk-measurement system to measure VaR daily. We have adopted standards for measuring VaR, and we maintain regulatory capital for market risk in accordance with currently applicable bank regulatory market risk capital guidelines.

Derivative financial instruments are also subject to credit and counterparty risk, which is defined as the risk of financial loss if a borrower or counterparty is either unable or unwilling to repay borrowings or settle a transaction in accordance with the underlying contractual terms. We manage credit and counterparty risk by performing credit reviews, maintaining individual counterparty limits, entering into netting arrangements and requiring the receipt of collateral. Collateral requirements are determined after a review of the creditworthiness of each counterparty, and the requirements are monitored and adjusted daily. Collateral is generally held in the form of cash or highly liquid U.S. government securities. We may be required to provide collateral to the counterparty in connection with our entry into derivative financial instruments. Cash collateral received from and provided to counterparties in connection with derivative financial instruments is recorded in accrued expenses and other liabilities and other assets, respectively, in our consolidated statement of condition. As of March 31, 2013 and December 31, 2012, we had recorded approximately \$2.42 billion and \$1.68 billion, respectively, of cash collateral received from counterparties and approximately \$1.97 billion and \$1.30 billion, respectively, of cash collateral provided to counterparties in connection with derivative financial instruments in our consolidated statement of condition.

We enter into master netting agreements with many of our derivative counterparties, and we have elected to net derivative assets and liabilities, including cash collateral received or deposited, which are subject to those agreements. Certain of these agreements contain credit risk-related contingent features in which the counterparty has the option to declare State Street in default and accelerate cash settlement of our net derivative liabilities with the counterparty in the event our credit rating falls below specified levels. The aggregate fair value of all derivative instruments with credit risk-related contingent features that were in a net liability position as of March 31, 2013 totaled approximately \$850 million, against which we had posted aggregate collateral of approximately \$130 million. If State Street's credit rating were downgraded below levels specified in the agreements, the maximum additional amount of payments related to termination events that could have been required pursuant to these contingent features as of March 31, 2013 was approximately \$720 million. Such accelerated settlement would not affect our consolidated results of operations.

Derivatives Not Designated as Hedging Instruments:

In connection with our trading activities, we use derivative financial instruments in our role as a financial intermediary and as both a manager and servicer of financial assets, in order to accommodate our clients' investment and risk management needs. In addition, we use derivative financial instruments for risk management purposes as economic hedges, which are not formally designated as accounting hedges, in order to contribute to our overall corporate earnings and liquidity. These activities are designed to generate trading revenue and to manage volatility in our net interest revenue. The level of market risk that we assume is a function of our overall objectives and liquidity needs, our clients' requirements and market volatility.

With respect to cross-border investing, our clients often enter into foreign exchange forward contracts to convert currency for international investments and to manage the currency risk in their international investment portfolios. As an active participant in the foreign exchange markets, we provide foreign exchange forward contracts and options in support of these client needs, and also act as a dealer in the currency markets. As part of our trading activities, we assume positions in both the foreign exchange and interest-rate markets by buying and selling cash instruments and using derivative financial instruments, including foreign exchange forward contracts, foreign exchange and interest-rate options and interest-rate swaps, interest-rate forward contracts, and interest-rate futures. In the aggregate, we seek to match positions closely with the objective of minimizing related currency and interest-rate risk. We offer products that provide book-value protection primarily to plan participants in stable value funds managed by non-affiliated investment managers of post-retirement defined contribution benefit plans, particularly 401(k) plans. We account

Table of Contents

STATE STREET CORPORATION

CONDENSED NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)

(UNAUDITED)

for the associated contingencies, more fully described in note 7, individually as derivative financial instruments. These contracts are valued quarterly and unrealized losses, if any, are recorded in other expenses in our consolidated statement of income.

Derivatives Designated as Hedging Instruments:

In connection with our asset-and-liability management activities, we use derivative financial instruments to manage our interest-rate risk. Interest-rate risk, defined as the sensitivity of income or financial condition to variations in interest rates, is a significant non-trading market risk to which our assets and liabilities are exposed. These hedging relationships are formally designated, and qualify for hedge accounting, as fair value or cash flow hedges. We manage interest-rate risk by identifying, quantifying and hedging our exposures, using fixed-rate portfolio securities and a variety of derivative financial instruments, most frequently interest-rate swaps and options (for example, interest rate caps and floors). Interest-rate swap agreements alter the interest-rate characteristics of specific balance sheet assets or liabilities. When appropriate, forward-rate agreements, options on swaps, and exchange-traded futures and options are also used.

Fair value hedges

Derivatives designated as fair value hedges are utilized to mitigate the risk of changes in fair value of recognized assets and liabilities. Differences between the gains and losses on fair value hedges and the gains and losses on the asset or liability attributable to the hedged risk represent hedge ineffectiveness. We use interest-rate or foreign exchange contracts in this manner to manage our exposure to changes in the fair value of hedged items caused by changes in interest rates or foreign exchange rates.

We have entered into interest-rate swap agreements to modify our interest revenue from certain available-for-sale investment securities from a fixed rate to a floating rate. The securities hedged have a weighted-average life of approximately 6.7 years as of March 31, 2013, compared to 6.9 years as of December 31, 2012. These securities are hedged with interest-rate swap contracts of similar maturity, repricing and fixed-rate coupons. The interest-rate swap contracts convert the interest revenue from a fixed rate to a floating rate indexed to LIBOR, thereby mitigating our exposure to fluctuations in the fair value of the securities attributable to changes in the benchmark interest rate.

We have entered into an interest-rate swap agreement to modify our interest expense on a senior note from a fixed rate to a floating rate. The senior note matures in 2021 and pays fixed interest at a 4.375% annual rate. The senior note is hedged with an interest-rate swap contract with a notional amount, maturity and a fixed-rate coupon term that aligns with the hedged note. The interest-rate swap contract converts the fixed-rate coupon to a floating rate indexed to LIBOR, thereby mitigating our exposure to fluctuations in the fair value of the senior note stemming from changes in the benchmark interest rate.

We have entered into forward foreign exchange contracts to hedge the change in fair value attributable to foreign exchange movements in the funding of non-functional currency-denominated investment securities. These forward contracts convert the foreign currency risk to U.S. dollars, thereby mitigating our exposure to fluctuations in the fair value of the securities attributable to changes in foreign exchange rates. Generally, no ineffectiveness is recorded in earnings, since the notional amount of the hedging instruments is aligned with the carrying value of the hedged securities. The forward points on the hedging instruments are considered to be a hedging cost, and accordingly are excluded from the evaluation of hedge effectiveness and recorded in net interest revenue.

Cash flow hedges

Derivatives categorized as cash flow hedges are utilized to offset the variability of cash flows to be received from or paid on a floating-rate asset or liability. Ineffectiveness of cash flow hedges is defined as the extent to which the changes in fair value of the derivative exceed the variability of cash flows of the forecasted transaction.

We have entered into an interest-rate swap agreement to modify our interest revenue from an available-for-sale debt security from a floating rate to a fixed rate. The hedged security has a remaining life of approximately 1.5 years as of March 31, 2013, compared to 1.8 years as of December 31, 2012. The security is hedged with an interest-rate swap contract of similar maturity, repricing and other characteristics. The interest-rate swap contract converts the interest

revenue from a floating rate to a fixed rate, thereby mitigating our exposure to fluctuations in the cash flows of the security attributable to changes in the benchmark interest rate.

We have entered foreign exchange contracts to hedge the change in cash flows attributable to foreign exchange movements in the funding of non-functional currency-denominated investment securities. These foreign exchange contracts convert the foreign currency risk to U.S. dollars, thereby mitigating our exposure to fluctuations in the cash flows of the securities attributable to changes in foreign exchange rates. Generally, no ineffectiveness is recorded in earnings, since the critical terms of the hedging instruments and the hedged securities are aligned.

The following table presents the aggregate contractual, or notional, amounts of derivative financial instruments entered into in connection with our trading and asset-and-liability management activities as of the dates indicated:

(In millions)	March 31, 2013	December 31, 2012
Derivatives not designated as hedging instruments:		
Interest-rate contracts:		
Swap agreements and forwards	\$1,426	\$1,578
Options and caps purchased	57	68
Options and caps written	57	68
Futures	5,239	1,910
Foreign exchange contracts:		
Forward, swap and spot	967,407	897,354
Options purchased	7,584	9,454
Options written	7,092	8,734
Credit derivative contracts:		
Credit swap agreements	42	27
Other:		
Stable value contracts	32,171	33,512
Derivatives designated as hedging instruments:		
Interest-rate contracts:		
Swap agreements	2,614	3,153
Foreign exchange contracts:		
Forward and swap	3,276	3,477

In connection with our asset-and-liability management activities, we have entered into interest-rate contracts designated as fair value and cash flow hedges to manage our interest-rate risk. The following table presents the aggregate notional amounts of these interest-rate contracts and the related assets or liabilities being hedged as of the dates indicated:

(In millions)	March 31, 2013			December 31, 2012		
	Fair Value Hedges	Cash Flow Hedges	Total	Fair Value Hedges	Cash Flow Hedges	Total
Investment securities available for sale	\$1,743	\$121	\$1,864	\$1,573	\$130	\$1,703
Long-term debt ⁽¹⁾	750	—	750	1,450	—	1,450
Total	\$2,493	\$121	\$2,614	\$3,023	\$130	\$3,153

⁽¹⁾ As of March 31, 2013 and December 31, 2012, fair value hedges of long-term debt increased the carrying value of long-term debt presented in our consolidated statement of condition by \$151 million and \$174 million, respectively. The following table presents the contractual and weighted-average interest rates for long-term debt, which include the effects of the hedges presented in the table above, for the periods indicated:

	Three Months Ended March 31,			
	2013		2012	
	Contractual Rates	Rate Including Impact of Hedges	Contractual Rates	Rate Including Impact of Hedges
Long-term debt	3.77	% 3.03	% 3.93	% 3.23

For cash flow hedges, any changes in the fair value of the derivative financial instruments remain in accumulated other comprehensive income, and are generally recorded in our consolidated statement of income in future periods

when earnings are affected by the variability of the hedged cash flow.

The following tables present the fair value of the derivative financial instruments, excluding the impact of master netting agreements, recorded in our consolidated statement of condition as of the dates indicated. The impact of master netting agreements is disclosed in note 2.

Note 11. Offsetting Arrangements

We manage credit and counterparty risk by entering into enforceable netting agreements and other collateral arrangements with counterparties to derivative financial instruments and secured financing transactions, including resale and repurchase agreements, and principal securities borrowing and lending agreements. These netting agreements mitigate our counterparty credit risk by providing for a single net settlement with a counterparty of all financial transactions covered by the agreement in an event of default as defined under such agreement. In limited cases, a netting agreement may also provide for the periodic netting of settlement payments with respect to multiple different transaction types in the normal course of business.

Certain of our derivative contracts are executed under either standardized netting agreements or, for exchange-traded derivatives, the relevant contracts for a particular exchange which contain enforceable netting provisions. In certain cases, we may have cross-product netting arrangements which allow for netting and set-off of a variety of types of derivatives with a single counterparty. A derivative netting arrangement creates an enforceable right of set-off that becomes effective, and affects the realization or settlement of individual financial assets and liabilities, only following a specified event of default. Collateral requirements associated with our derivative contracts are determined after a review of the creditworthiness of each counterparty, and the requirements are monitored and adjusted daily, typically based on net exposure by counterparty. Collateral is generally in the form of cash or highly liquid U.S. government securities.

In connection with our secured financing activities, we enter into netting agreements and other collateral arrangements with counterparties, which provide for the right to liquidate collateral upon an event of default. Required collateral is generally in the form of cash, equities or fixed-income securities. Default events may include the failure to make payments or deliver securities timely, material adverse changes in financial condition or insolvency, the breach of minimum regulatory capital requirements, or loss of license, charter or other legal authorization necessary to perform under the contract.

In order for an arrangement to be eligible for netting, we must have a basis to conclude that such netting arrangements are legally enforceable. The analysis of the legal enforceability of an arrangement differs by jurisdiction, depending on the laws of that jurisdiction. In many jurisdictions, specific legislation exists that provides for the enforceability in bankruptcy of close-out netting under a netting agreement, typically by way of specific exception from more general prohibitions on the exercise of creditor rights.

When we have a basis to conclude that a legally enforceable netting arrangement exists between us and the derivative counterparty and the relevant transaction is the type of transaction that is recorded in our consolidated statement of condition, we offset derivative assets and liabilities, and the related collateral received and provided, in our consolidated statement of condition. We also offset secured financing assets and liabilities with the same counterparty or clearinghouse which have the same maturity date and are settled in the normal course of business on a net basis.

Note 13. Acquisition and Restructuring Costs

The following table presents net acquisition and restructuring costs recorded in the periods indicated:

(In millions)	Three Months Ended March	
	2013	2012
Acquisition costs	\$15	\$13
Restructuring charges, net	(1) 8
Total acquisition and restructuring costs	\$14	\$21

Acquisition Costs

Acquisition costs incurred in the three months ended March 31, 2013 totaled \$15 million, compared to \$13 million in the three months ended March 31, 2012, with the costs in both periods related to previously announced acquisitions.

Restructuring Charges

In the three months ended March 31, 2013, we recorded a net restructuring credit of \$1 million, composed of \$8 million of restructuring charges related to the continuing implementation of our Business Operations and Information Technology Transformation program, offset by a credit of \$9 million related to expense control measures initiated by us in December 2012. In the three months ended March 31, 2012, we recorded \$8 million of restructuring charges, composed of \$15 million related to the Business Operations and Information Technology Transformation program, partly offset by a \$7 million credit related to expense control measures we initiated in December 2011, specifically our withdrawal from our fixed-income trading initiative.

Information with respect to these initiatives (the Business Operations and Information Technology Transformation program and the 2011 and 2012 expense control measures), including charges, employee reductions and aggregate activity in the related accruals, is provided in the two sections that follow.

Business Operations and Information Technology Transformation Program

In November 2010, we announced a global multi-year Business Operations and Information Technology Transformation program. The program includes operational, information technology and targeted cost initiatives, including plans related to reductions in both staff and occupancy costs. To date, we have recorded aggregate restructuring charges of \$364 million in our consolidated statement of income, composed of \$156 million in 2010, \$133 million in 2011, \$67 million in 2012 and \$8 million in the three months ended March 31, 2013.

The charges related to the program included costs related to severance, benefits and outplacement services, as well as costs which resulted from actions taken to reduce our occupancy costs through consolidation of real estate. The charges also included costs related to information technology, including transition fees associated with the expansion of our use of service providers associated with components of our information technology infrastructure and application maintenance and support.

In 2010, in connection with the program, we initiated the involuntary termination of 1,400 employees, or approximately 5% of our global workforce, which was substantially complete at the end of 2011. In addition, in 2011, in connection with the expansion of our use of service providers associated with our information technology infrastructure and application maintenance and support, we identified approximately 530 employees to be involuntarily terminated as their roles were eliminated. In 2012 and in the three months ended March 31, 2013, an additional 164 and 148 positions, respectively, were identified for elimination. As of March 31, 2013, in connection with the planned aggregate staff reduction of 2,242 employees described above, 2,065 of such identified employees had been involuntarily terminated, composed of 550 employees in 2010, 782 employees in 2011, 697 employees in 2012 and 36 employees in the three months ended March 31, 2013.

Expense Control Measures

In December 2011, in connection with expense control measures designed to calibrate our expenses to our outlook for our capital markets-facing businesses in 2012, we took two actions. First, we withdrew from our fixed-income trading

initiative, in which we traded in fixed-income securities and derivatives as principal with our custody clients and other third-parties that trade in these securities and derivatives. Second, we undertook other targeted staff reductions. As a result of these actions, we recorded aggregate pre-tax restructuring charges of \$120 million in 2011, and a net credit of \$1 million in 2012, in our consolidated statement of income. We did not record any restructuring charges in the three months ended March 31, 2013 related to these expense control measures.

Table of Contents

STATE STREET CORPORATION

CONDENSED NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)

(UNAUDITED)

The charges recorded in 2011 included costs related to severance, benefits and outplacement services with respect to both our withdrawal from our fixed-income initiative and the other targeted staff reductions. In connection with the employee-related actions, we identified 442 employees to be involuntarily terminated as their roles were eliminated. As of March 31, 2013, 384 employees had been involuntarily terminated, composed of 15 employees in 2011, 363 employees in 2012 and 6 employees in the three months ended March 31, 2013. The charges also included costs associated with fair-value adjustments to the initiative's trading portfolio resulting from our decision to withdraw from the initiative, as well as costs related to asset write-downs and contract terminations.

In December 2012, in connection with expense control measures designed to better align our expenses to our business strategy and related outlook for 2013, we identified additional targeted staff reductions. As a result of these actions, we recorded aggregate pre-tax restructuring charges of \$133 million in 2012. We also recorded a net credit of \$9 million in the three months ended March 31, 2013 in our consolidated statement of income. The 2012 charges included employee-related costs for severance, benefits and outplacement services, as well as costs for asset and other write-offs related to contract terminations. In connection with these 2012 expense control measures, we identified 630 employees to be involuntarily terminated as their roles are eliminated. As of March 31, 2013, 453 employees had been involuntarily terminated, composed of 40 employees in 2012 and 413 employees in the three months ended March 31, 2013. The credit recorded in the three months ended March 31, 2013 was related to adjustments to severance and benefits-related charges recorded in 2012.

Aggregate Restructuring-Related Accrual Activity

The following table presents aggregate activity associated with accruals that resulted from the charges associated with the Business Operations and Information Technology Transformation program and the 2011 and 2012 expense control measures:

(In millions)	Employee- Related Costs	Real Estate Consolidation	Information Technology Costs	Asset and Other Write-Offs	Total
Balance as of December 31, 2012	\$ 195	\$ 49	\$ 5	\$ 13	\$ 262
Accruals for Business Operations and Information Technology Transformation program	9	—	(1)	8
Adjustments of accruals for 2012 expense control measures	(9)	—	—	(9
Payments and adjustments	(44)	(6)	(57
Balance as of March 31, 2013	\$ 151	\$ 43	\$ —	\$ 10	\$ 204

Note 14. Earnings Per Common Share

The following table presents the computation of basic and diluted earnings per common share for the periods indicated:

	Three Months Ended March 31,	
(Dollars in millions, except per share amounts)	2013	2012
Net income	\$464	\$427
Less:		
Preferred stock dividends	(7)	(7)
Dividends and undistributed earnings allocated to participating securities ⁽¹⁾	(2)	(3)
Net income available to common shareholders	\$455	\$417
Average common shares outstanding (in thousands):		
Basic average common shares	454,315	484,942
Effect of dilutive securities: common stock options and common stock awards	8,436	5,512
Diluted average common shares	462,751	490,454
Anti-dilutive securities ⁽²⁾	2,488	1,470
Earnings per Common Share:		
Basic	\$1.00	\$.86
Diluted	.98	.85

⁽¹⁾ Represented the portion of net income available to common equity allocated to participating securities; participating securities, composed of unvested restricted stock and director stock awards, contain non-forfeitable rights to dividends during the vesting period on a basis equivalent to dividends paid to common shareholders.

⁽²⁾ Represented common stock options and other equity-based awards outstanding, but not included in the computation of diluted average shares because their effect was anti-dilutive.

Note 15. Line of Business Information

We have two lines of business: Investment Servicing and Investment Management. Given our services and management organization, the results of operations for these lines of business are not necessarily comparable with those of other companies, including companies in the financial services industry. Information about our two lines of business, as well as revenues, expenses and capital allocation methodologies with respect to these lines of business, is provided in note 24 to the consolidated financial statements included in our 2012 Form 10-K.

The following is a summary of our line of business results for the periods indicated. The "Other" columns for 2013 and 2012 included net acquisition and restructuring costs. The "Other" column for 2012 also included provisions for litigation exposure. The amounts in the "Other" columns were not allocated to State Street's business lines. Results for the three months ended March 31, 2012 reflect reclassifications, for comparative purposes, related to management changes in methodology associated with funds transfer pricing and expense allocation reflected in results for 2013.

CONDENSED NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)

(UNAUDITED)

Note 16. Non-U.S. Activities

We define our non-U.S. activities as those revenue-producing business activities that arise from clients domiciled outside the U.S. Due to the integrated nature of our business, precise segregation of our U.S. and non-U.S. activities is not possible. Subjective estimates and other judgments have been applied to determine the financial results and assets related to our non-U.S. activities, including our application of funds transfer pricing, our asset-and-liability management policies and our allocation of certain indirect corporate expenses. Interest expense allocations are based on our internal funds transfer pricing methodology.

The following table presents our non-U.S. financial results for the periods indicated. Results for the three months ended March 31, 2012 reflect changes in methodology associated with funds transfer pricing and expense allocation reflected in results for the three months ended March 31, 2013.

(In millions)	Three Months Ended March 31,	
	2013	2012
Total fee revenue	\$765	\$738
Net interest revenue	273	227
Gains (Losses) related to investment securities, net	(3) 3
Total revenue	1,035	968
Expenses	753	766
Income before income taxes	282	202
Income tax expense	69	47
Net income	\$213	\$155

The following table presents the significant components of our non-U.S. assets as of the dates indicated, based on the domicile of the underlying counterparties:

(In millions)	March 31, 2013	December 31, 2012
Interest-bearing deposits with banks	\$14,436	\$20,665
Investment securities	28,733	28,976
Other assets	8,592	5,929
Total non-U.S. assets	\$51,761	\$55,570

REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

The Shareholders and Board of Directors of
State Street Corporation

We have reviewed the consolidated statement of condition of State Street Corporation (the "Corporation") as of March 31, 2013, and the related consolidated statements of income and comprehensive income, changes in shareholders' equity, and cash flows for the three-month periods ended March 31, 2013 and 2012. These financial statements are the responsibility of the Corporation's management.

We conducted our review in accordance with the standards of the Public Company Accounting Oversight Board (United States). A review of interim financial information consists principally of applying analytical procedures and making inquiries of persons responsible for financial and accounting matters. It is substantially less in scope than an audit conducted in accordance with the standards of the Public Company Accounting Oversight Board, the objective of which is the expression of an opinion regarding the financial statements taken as a whole. Accordingly, we do not express such an opinion.

Based on our review, we are not aware of any material modifications that should be made to the consolidated financial statements referred to above for them to be in conformity with U.S. generally accepted accounting principles.

We have previously audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), the consolidated statement of condition of State Street Corporation as of December 31, 2012, and the related consolidated statements of income and comprehensive income, changes in shareholders' equity, and cash flows for the year then ended, not presented herein, and in our report dated February 22, 2013, we expressed an unqualified opinion on those consolidated financial statements. In our opinion, the information set forth in the accompanying consolidated statement of condition as of December 31, 2012, is fairly stated, in all material respects, in relation to the consolidated statement of condition from which it has been derived.

PART II. OTHER INFORMATION

ITEM 2. UNREGISTERED SALES OF EQUITY SECURITIES AND USE OF PROCEEDS

(c) In March 2012, our Board of Directors approved a common stock purchase program authorizing the purchase by us of up to \$1.80 billion of our common stock through March 31, 2013. In March 2013, our Board of Directors approved a new common stock purchase program authorizing the purchase by us of up to \$2.10 billion of our common stock through March 31, 2014.

The following table presents purchases of our common stock and related information for each of the months in the quarter ended March 31, 2013. All shares of our common stock purchased in the periods presented were purchased under the March 2012 program. We did not purchase any of our common stock under the March 2013 program in the quarter ended March 31, 2013. We may employ third-party broker/dealers to acquire shares on the open market in connection with our common stock purchase programs.

(Dollars in millions, except per share amounts, shares in thousands)	Total Number of Shares Purchased Under Publicly Announced Program	Average Price Paid Per Share	Approximate Dollar Value of Shares Purchased Under Publicly Announced Program	Approximate Dollar Value of Shares Yet to be Purchased Under Publicly Announced Program	
Period:					
January 1 - January 31, 2013	2,991	\$52.71	\$158	\$202	
February 1 - February 28, 2013	3,557	56.83	202	—	
March 1 - March 31, 2013	—	—	—	2,100	(1)
Total	6,548	\$54.95	\$360	\$2,100	(1)

(1) Amount reflects the total dollar value of shares that can be purchased under the March 2013 program.

ITEM 6. EXHIBITS

The exhibits listed in the Exhibit Index on page 104 of this Form 10-Q are filed herewith or are incorporated herein by reference to other SEC filings.
