DTE Energy Company

**Current Report on Form 8-K
September 17, 2002**

ITEM 5. OTHER EVENTS

Effective January 1, 2002, DTE Energy Company (Company) realigned its internal and external reporting structure from six segments (Electric Utility, Gas Utility, Wholesale Marketing & Trading, Energy Services, Other Non-regulated Operations, and Corporate & Other) to three strategic business units (Energy Resources, Energy Distribution and Energy Gas) that have both regulated and non-regulated operations. Based on this structure, management establishes the company's strategic goals, allocates its resources and evaluates its performance.

In the March 31, 2002 and June 30, 2002 quarterly reports filed on Form 10-Q, DTE Energy presented financial data reflecting operating revenues and net income based on the three strategic business units described above. DTE Energy is filing this Form 8-K to enable investors to compare the financial data for the previous segment reporting structure to the financial data for the new segment reporting structure. The new reporting structure does not affect consolidated operating revenues or net income.

BUSINESS

General

DTE Energy Company (DTE Energy or the Company), a Michigan corporation incorporated in 1995, is an exempt holding company under the Public Utility Holding Company Act of 1935. The Company is the parent holding company of The Detroit Edison Company (Detroit Edison), the International Transmission Company (ITC), DTE Enterprises Inc. (Enterprises), and other subsidiaries engaged in energy trading, energy services and other energy-related businesses.

On May 31, 2001, DTE Energy completed the acquisition of MCN Energy Group Inc. (MCN Energy). At that time, MCN Energy merged with Enterprises, with Enterprises being the surviving corporation. The operations of Enterprises are included in the Company's consolidated results from the date of acquisition. Enterprises, a Michigan corporation, is an exempt holding company under the Public Utility Holding Company Act of 1935. Enterprises is primarily involved in natural gas production, gathering, processing, transmission, storage, distribution and energy marketing. Enterprises' largest subsidiary, Michigan Consolidated Gas Company (MichCon), is a natural gas utility serving 1.2 million customers in a 14,700 square-mile area in Michigan.

Segments

Effective January 1, 2002, the Company realigned its internal and external financial reporting structure from six segments (Electric Utility, Gas Utility, Wholesale Marketing & Trading, Energy Services, Other Non-regulated Operations, and Corporate & Other) to three strategic business units (Energy Resources, Energy Distribution and Energy Gas) that have both regulated and non-regulated operations. Based on this structure, management establishes the company's strategic goals, allocates its resources and evaluates its performance. The structural realignment resulted in nine reportable segments. Operating revenues and a description of each segment follows:

Table of Contents

(in Millions)	2001	2000	1999

Energy Resources

Regulated operations include the power generation services of Detroit Edison, the Company's electric utility that is regulated by the Michigan Public Service Commission (MPSC) and the Federal Energy Regulatory Commission (FERC). Electricity is generated from Detroit Edison's numerous fossil plants or its nuclear plant and sold throughout Southeastern Michigan to residential, commercial, industrial and wholesale customers.

Detroit Edison's generating capability is primarily dependent upon coal. Detroit Edison expects to obtain the majority of its coal requirements through long-term contracts with the balance to be obtained through short-term agreements and spot purchases. Detroit Edison has contracts with four coal suppliers for a total purchase of up to 34 million tons of low-sulfur western coal to be delivered during the period from 2002 through 2005. Detroit Edison also has four contracts for the purchase of approximately 16.8 million tons of Appalachian coal to be delivered during the period from 2002 through 2007. These existing long-term coal contracts include provisions for price escalation as well as de-escalation.

Non-regulated

Energy Services is comprised of various businesses that develop and manage energy-related assets and services. Such projects include coke production, synfuels production, independent power plants, on-site energy projects and cogeneration facilities. The economic viability of synfuels projects is tied to their generation of alternate fuels tax credits.

Table of Contents

Wholesale Marketing & Trading consists of the electric and gas marketing and trading operations of DTE Energy Trading Company and the natural gas marketing and trading operations of DTE Enterprises, which was acquired as part of the MCN Energy merger. Wholesale Marketing & Trading enters into forwards, futures, swaps and option contracts as part of its trading strategy. Wholesale Marketing & Trading focuses on physical power marketing and structured transactions, as well as the enhancement of returns from its power plant, pipeline and storage assets.

Other non-regulated operations consist of businesses involved in coal services and landfill gas recovery along with an independent generating unit.

Energy Distribution

Regulated operations include the electric distribution services of Detroit Edison, and the electric transmission services of the International Transmission Company (ITC). Energy Distribution distributes electricity generated by Energy Resources and alternative electric suppliers to Detroit Edison's 2.1 million residential, commercial and industrial customers. ITC is regulated by the FERC and owns transmission assets that are operated by the Midwest Independent System Operator, a regional transmission operator. Prior to June 2001, Detroit Edison owned these transmission assets. As a result of the continued restructuring of the electric industry, the Company is currently contemplating the sale of ITC. Any divestiture will be independently evaluated to maximize shareholder value.

Table of Contents

Sales and customer data by rate class are as follows:

	<u>2001</u>	<u>2000</u>	<u>1999</u>
Electric Sales and Deliveries			
(in Thousands of MWh)			
Electric Sales			
Residential	14,503	13,903	14,064
Commercial	18,777	19,762	19,546
Industrial	14,430	16,090	15,647
Wholesale	868	2,592	3,672
Other	2,538	2,653	2,595
	<u>51,116</u>	<u>55,000</u>	<u>55,524</u>

	<u>52,384</u>	<u>55,202</u>	<u>55,532</u>
Customers (in Thousands)			
Residential	1,938	1,922	1,904
Commercial	184	185	182
Industrial	1	1	1
Other	2	2	2
	<u>2,125</u>	<u>2,110</u>	<u>2,089</u>
Electric Choice (delivery customers only)	1		
	<u>2,126</u>	<u>2,110</u>	<u>2,089</u>

Detroit Edison's sales and revenues are impacted by weather. Its peak load and highest total system sales generally occur during the third quarter of the year due to air conditioning and cooling-related loads.

During 2001, sales to automotive and automotive-related customers accounted for approximately 8.5 percent of total Detroit Edison operating revenues. Detroit Edison's 30 largest industrial customers accounted for approximately 17 percent of total operating revenues in 2001, 2000 and 1999, and no one customer accounted for more than 5 percent of total operating revenues. Detroit Edison's operations are not dependent upon a limited number of customers, and the loss of any one or a few customers is not reasonably likely to have a material adverse effect on Detroit Edison.

Detroit Edison continues to bill and collect transmission revenues as currently authorized in its bundled distribution rates approved by the MPSC. ITC provides transmission services to customers of Detroit Edison and other non-affiliated customers. ITC billed Detroit Edison approximately \$57 million since June 1, 2001, for the costs of providing transmission services to utility customers.

Non-regulated operations primarily consist of DTE Energy Technologies, businesses that market and distribute a broad portfolio of distributed generation products, provide application engineering, and monitor and manage system operations.

Energy Gas

Regulated operations include gas distribution services provided by MichCon, the Company's gas utility that is engaged in the purchase, distribution, storage and transmission of natural gas throughout Michigan to 1.2 million residential, commercial and industrial customers. As previously discussed, the Company acquired MichCon on May 31, 2001, as part of the MCN Energy merger.

Table of Contents

Accordingly, the operating results of MichCon are included in the Company's consolidated results from the acquisition date.

MichCon's sales and revenues are impacted by weather and are concentrated in the first and fourth quarters of the year due to heating-related demands.

MichCon's operations are not dependent upon a limited number of customers, and the loss of any one or a few customers is not reasonably likely to have a material adverse effect on MichCon.

MichCon obtains its natural gas supply from various sources in different geographic areas under agreements that vary in both pricing and terms. MichCon has entered into fixed-price contracts for approximately 155 billion cubic feet (Bcf) of its expected 2002 supply requirements of 200 Bcf. The balance of the gas supply requirements will be met through the utilization of existing gas in inventory and purchasing gas at market prices. MichCon owns and operates four natural gas storage fields in Michigan with a capacity of approximately 124 Bcf. MichCon has long-term firm transportation agreements expiring on various dates through 2011.

Non-regulated operations include the exploration and production of gas and the gathering, processing and storing of gas. Certain pipeline and storage assets are used to support the Wholesale Marketing & Trading segment.

Corporate & Other includes administrative and general expenses, and interest costs of DTE Energy corporate that have not been allocated to the regulated and non-regulated businesses. Corporate & Other also includes various other non-regulated operations, including investments in new emerging energy technologies.

See Note 20 – Subsequent Events, for financial information for the last three fiscal years that is based upon the segment reporting structure that became effective January 1, 2002.

Regulation

Detroit Edison and MichCon are subject to the regulatory jurisdiction of the MPSC, which issues orders pertaining to rates, recovery of certain costs, including the costs of generating facilities and regulatory assets, conditions of service, accounting and operating related matters. Detroit Edison is regulated by the FERC with respect to financing authorization. ITC is regulated by the FERC for the transmission of electric energy. The Nuclear Regulatory Commission (NRC) has regulatory jurisdiction over all phases of the operation, construction (including plant modification), licensing and decommissioning of Detroit Edison's Fermi 2 nuclear plant.

Energy Resources and Energy Distribution

In June 2000, the Michigan Legislature enacted legislation that established January 2002 as the date for full implementation of the electric Customer Choice program and reduced electric rates by 5%. The legislation also contains provisions preventing rate increases for residential customers through 2005, for small business customers through 2004, and remaining business customers through 2003. In December 2001, the MPSC issued orders designed to increase customer participation in the electric Customer Choice program and to allow Detroit Edison to recover costs not previously securitized related to its generation operations that may not otherwise be recoverable due to Electric Choice related lost sales and margins. Detroit Edison has requested rehearing, clarification and changes to certain aspects of the December 2001 orders.

Table of Contents

Due to MPSC orders issued in 1997 and 1998, which altered the regulatory process in Michigan and provided a plan for transition to competition for the generation business of Detroit Edison, effective December 1998, Detroit Edison's generation business no longer met the criteria of Statement of Financial Accounting Standards (SFAS) No. 71, Accounting for the Effects of Certain Types of Regulation.

Energy Gas

In December 2001, the MPSC issued orders that continue MichCon's gas Customer Choice program on a permanent and expanding basis and reinstated MichCon's gas cost recovery (GCR) mechanism in January 2002 upon termination of its three-year experimental Gas Sales Program in which its sales rates included a gas commodity component that was fixed at \$2.95 per thousand cubic feet (Mcf).

Please see Management's Discussion and Analysis of Financial Condition and Results of Operations and Note 4 Regulatory Matters for further discussion of regulation and electric and gas industry restructuring.

Environmental Matters

The Company is subject to extensive environmental regulation. Additional costs may result as the effects of various chemicals on the environment are studied and governmental regulations are developed and implemented. The Company expects that it will continue to recover environmental costs through rates charged to customers.

Table of Contents

Energy Resources and Energy Distribution

Detroit Edison is subject to applicable permit requirements, and to increasingly stringent federal, state and local standards covering among other things, particulate and gaseous stack emission limitations, the discharge of effluents into lakes and streams and the handling and disposal of waste material.

The U.S. Environmental Protection Agency (EPA) issued ozone transport regulations and air quality standards relating to ozone and particulate air pollution. The new rules have led to additional controls on fossil-fueled power plants to reduce nitrogen oxides, sulfur dioxide, carbon dioxide and particulate emissions. The EPA initiated enforcement actions against several major electric utilities citing violations of new source provisions of the Clean Air Act. Detroit Edison received and responded to information requests from the EPA on this subject. The Company cannot predict the future impact of this issue upon Detroit Edison.

Detroit Edison is required to demonstrate that the cooling water intake structures at all of its facilities minimize adverse environmental impact. Detroit Edison filed such demonstrations and in the event of a final adverse decision, may be required to install additional control technologies to further minimize the impact.

Various state and federal laws regulate Detroit Edison's handling, storage and disposal of its waste materials. The EPA and the Michigan Department of Environmental Quality (MDEQ) have aggressive programs regarding the clean up of contaminated property. Detroit Edison has extensive land holdings and, from time to time, must investigate claims of improperly disposed of contaminants. Detroit Edison anticipates it will be periodically included in these types of environmental proceedings.

Energy Gas

Prior to the construction of major natural gas pipelines, gas for heating and other uses was manufactured from processes involving coal, coke or oil. Enterprises owns, or previously owned, 17 such former manufactured gas plant (MGP) sites. Investigations have revealed contamination related to the by-products of gas manufacturing at each site. Enterprises is remediating eight of the former MGP sites and is conducting more extensive investigations at three of the sites. Enterprises has received MDEQ closure of one site and a determination that it is not a responsible party for two other sites. The Company believes that a cost deferral and rate recovery mechanism approved by the MPSC will prevent these costs from having a material adverse impact on the Company's results of operations.

OTHER

The Company's non-regulated affiliates are subject to a number of environmental laws and regulations dealing with the protection of the environment from various pollutants. These non-regulated affiliates are in substantial compliance with all environmental requirements.

Please see Management's Discussion and Analysis of Financial Condition and Results of Operations and Note 14 - Commitments and Contingencies for further discussion of environmental matters.

Competition

The state of Michigan continues its initiatives to restructure the electric and gas industries by expanding the existing Customer Choice programs to allow customers the opportunity to benefit from lower electric generation and gas costs resulting from competition.

Table of Contents

Energy Resources and Energy Distribution

Competition in the electric business is provided by alternative suppliers of generation services in the wholesale and retail markets. Effective January 1, 2002, the electric Customer Choice program was expanded whereby all electric customers can choose to purchase the electricity from alternative suppliers. It is estimated that approximately 5% to 8% of Detroit Edison's generation sales could be lost as a result of customers participating in the electric Customer Choice program in 2002. Detroit Edison does not earn margins on generation from customers who purchase from alternative suppliers of generation under the electric Customer Choice program. ITC and Detroit Edison continue to earn margins from providing transmission and distribution services to customers. MPSC orders issued in December 2001 could result in higher numbers of retail customers being lost to Customer Choice.

Energy Gas

Competition in the gas business primarily involves alternate fuels and energy sources and alternative suppliers of natural gas. Under the expanded gas Customer Choice program, beginning April 1, 2002, up to approximately 40% of MichCon's customers could purchase gas from alternative suppliers. Beginning April 1, 2003, up to approximately 60% could participate and beginning April 2004, all of MichCon's gas customers could participate in the gas Customer Choice program. As of December 2001, approximately 30,000 customers were participating under the temporary choice program. Due to the reinstatement of the GCR mechanism in January 2002, MichCon's gas sales rates will now include a gas commodity component designed to recover its actual gas costs. MichCon will continue to transport and deliver the gas to participating customers at prices that generate favorable margins.

OTHER

The Company's non-regulated subsidiaries primarily compete with other utilities and energy companies, utility-affiliated and independent developers, power and natural gas marketers, distributed generation developers and venture investment companies.

Please see Management's Discussion and Analysis of Financial Condition and Results of Operations and Note 4 Regulatory Matters for further discussion of competition and the impact on rates.

Employees

As of December 31, 2001, the Company and its subsidiaries had 11,030 employees.

Table of Contents**Executive Officers of the Registrant**

Name	Age (a)	Present Position	Present Position Held Since
Anthony F. Earley, Jr.	52	Chairman of the Board, Chief Executive Officer, President, Chief Operating Officer	8-1-98
Gerard M. Anderson	43	Group President	5-31-01
Robert J. Buckler	52	Group President	5-31-01
Stephen E. Ewing	57	Group President	5-31-01
Howard L. Dow	46	Senior Vice President	5-31-01
S. Martin Taylor	61	Senior Vice President	4-28-99
Eric H. Peterson (b)	41	Senior Vice President and General Counsel	9-5-00
David E. Meador	44	Senior Vice President and Chief Financial Officer	5-31-01
Susan M. Beale	53	Vice President and Corporate Secretary	12-11-95
Daniel G. Brudzynski	41	Vice President and Controller	2-8-01

(a) As of December 31, 2001

(b) Effective April 1, 2002, Thomas A. Hughes, age 58, will serve as acting General Counsel.

Under the Company's By-Laws, the officers of the Company are elected annually by the Board of Directors at a meeting held for such purpose, each to serve until the next annual meeting of directors or until their respective successors are chosen and qualified. With the exception of Messrs. Peterson, Dow and Ewing, all of the above officers have been employed by the Company in one or more management capacities during the past five years.

Eric H. Peterson was a partner with Worsham Forsythe Wooldridge LLP of Dallas, Texas prior to joining the Company. Effective September 2000, he was elected Senior Vice President and General Counsel. Mr. Peterson resigned from the Company, effective March 31, 2002.

Howard L. Dow was elected senior vice president, strategic planning and development at DTE Energy on May 31, 2001. He joined DTE Energy having previously served as executive vice president and chief financial officer of MCN Energy during the previous five years.

Stephen E. Ewing was elected group president for DTE Energy Gas on May 31, 2001. He joined DTE Energy having previously served as president and chief operating officer of MCN Energy and president and chief executive officer of MichCon during the previous five years.

Pursuant to Article VI of the Company's Articles of Incorporation, directors of the Company will not be personally liable to the Company or its shareholders in the performance of their duties to the full extent permitted by law.

Article VII of the Company's Articles of Incorporation provides that each current or former director or officer of the Company, or each current and former employee or agent of the Company or a director, officer, employee or agent of another corporation, partnership, joint venture, trust or other enterprise (including the heirs, executors, administrators or estate of such person), shall be indemnified by the Company to the full extent permitted by the Michigan Business Corporation Act or any other applicable laws as presently or hereafter in effect. In addition, the Company has entered into indemnification agreements with all of its officers and directors, which agreements set forth procedures for claims for indemnification as well as contractually obligating the Company to provide indemnification to the maximum extent permissible by law.

Table of Contents

The Company and its directors and officers in their capacities as such are insured against liability for alleged wrongful acts (to the extent defined) under three insurance policies providing aggregate coverage in the amount of \$100 million.

PROPERTIES

DTE Energy, through its operating segments, has property investments primarily associated with the generation, transmission and distribution of electricity; the distribution, transmission, production and storage of natural gas; and other non-regulated property.

Substantially all of the net utility properties of Detroit Edison and MichCon are pledged as security for the payment of outstanding mortgage bonds and other secured debt.

Table of Contents**Energy Resources Regulated**

Detroit Edison maintains the following generating facilities, all located in the state of Michigan:

Plant Name	Location by Michigan County	Summer Net		Year in Service
		Rated Capability (1) (2)		
		(MW)	(%)	
Fossil-fueled Steam-Electric				
Belle River (3)	St. Clair	1,026	9.3%	1984 and 1985
Conners Creek	Wayne	200	1.8	1999
Greenwood	St. Clair	785	7.1	1979
Harbor Beach	Huron	103	0.9	1968
Marysville	St. Clair	167	1.5	1930, 1943 and 1947
Monroe (4)	Monroe	3,000	27.1	1971, 1973 and 1974
River Rouge	Wayne	510	4.6	1957 and 1958
St. Clair	St. Clair	1,402	12.7	1953, 1954, 1961 and 1969
Trenton Channel	Wayne	730	6.6	1949, 1968 and 1999
		7,923	71.6	
Oil or Gas-fueled Peaking Units	Various	1,102	10.0	1966-1971, 1981 and 1999
Nuclear-fueled Steam-Electric Fermi 2 (5)	Monroe	1,111	10.1	1988
Hydroelectric Pumped Storage Ludington (6)	Mason	917	8.3	1973
		11,053	100%	

- (1) Summer net rated capabilities of generating units in service are based on periodic load tests and are changed depending on operating experience, the physical condition of units, environmental control limitations and customer requirements for steam, which otherwise would be used for electric generation.
- (2) Excludes one oil-fueled unit, St. Clair Unit No. 5 (250 MW), in economy reserve status.
- (3) The Belle River capability represents Detroit Edison's entitlement to 81.39% of the capacity and energy of the plant. See Note 6 Jointly Owned Utility Plant.
- (4) The Monroe Power Plant provided 36.62% of Detroit Edison's total 2001 power plant generation.
- (5) Fermi 2 has a design electrical rating (net) of 1,150 MW.
- (6) Represents Detroit Edison's 49% interest in Ludington with a total capability of 1,872 MW. Detroit Edison is leasing 306 MW to First Energy for the six-year period June 1, 1996 through May 31, 2002.

Energy Distribution Regulated

Detroit Edison and Consumers Energy interchange energy through nine interconnections currently owned and operated by their respective affiliates, ITC and Michigan Electric Transmission Company (METC). Detroit Edison and Consumers Energy also have interchange agreements that permit the exchange of electric energy through 12 ITC and METC owned interconnections with First Energy, Indiana Michigan Power Company, Northern Indiana Public Service Company and Ontario Hydro Services Company. In

Table of Contents

addition, Detroit Edison has interchange agreements for the exchange of electric energy with Michigan South Central Power Agency and the City of Wyandotte.

ITC owns and operates 446,903 line transformers with a capacity of 21,742,832 kilovolt (KV) amperes. Electric transmission lines owned and in service as of December 31, 2001 are as follows:

Design Line Voltage - KV	Overhead Lines		Underground Lines
	Pole Miles	Circuit Miles	Cable Miles
Transmission			
120 KV	1,110	1,625	166
140 KV	31	31	
230 KV	77	87	
345 KV	525	956	7
	<u>1,743</u>	<u>2,699</u>	<u>173</u>

Detroit Edison owns and operates 619 distribution substations with a capacity of 18,623,000 kilovolt amperes. Electric distribution lines owned and in service as of December 31, 2001 are as follows:

Design Line Voltage - KV	Overhead Lines	Underground Lines	
	Pole Miles	Conduit Bank Miles	Cable Miles
Distribution			
Under 4.8 KV		65	659
4.8 KV and 13.2 KV	32,973	459	15,163
24 KV	105	258	1,047
40 KV	2,846	91	338
120 KV	54		16
	<u>35,978</u>	<u>873</u>	<u>17,223</u>

Energy Gas Regulated

MichCon owns distribution, transmission, production and storage properties and facilities that are all located in the state of Michigan.

At December 31, 2001, MichCon's distribution system included 17,570 miles of distribution mains, 1,124,258 service lines and 1,220,623 active meters. MichCon owns 2,590 miles of transmission and production lines that deliver natural gas to the distribution districts and interconnect its storage fields with the sources of supply and the market areas. MichCon owns properties relating to four underground natural gas storage fields with an aggregate working gas storage capacity of approximately 124 Bcf.

Energy Resources Non-regulated

Non-regulated property consists primarily of coke oven battery facilities in Michigan and Indiana, coal processing facilities in Michigan and Maryland, merchant natural gas turbine facilities in Indiana and Michigan, and numerous landfill gas projects located throughout the United

States.

Table of Contents

Energy Gas Non-regulated

Energy Gas Non-regulated property consists of natural gas and oil exploration, development and production facilities.

Table of Contents

MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS

Merger Completed - On May 31, 2001, DTE Energy Company (DTE Energy or the Company) completed the acquisition of MCN Energy Group Inc. (MCN Energy). As discussed further in Note 2, MCN Energy merged with DTE Enterprises Inc., (Enterprises), a wholly owned subsidiary of the Company, with Enterprises being the surviving corporation. The operations of Enterprises are included in the Company's consolidated results from the date of acquisition. Enterprises, a Michigan corporation, is an exempt holding company under the Public Utility Holding Company Act of 1935. Enterprises is primarily involved in natural gas production, gathering, processing, transmission, storage, distribution and energy marketing. Enterprises' largest subsidiary, Michigan Consolidated Gas Company (MichCon), is a natural gas utility serving 1.2 million customers in a 14,700 square-mile area in Michigan.

RESULTS OF OPERATIONS

DTE Energy's earnings in 2001 were \$332 million or \$2.16 per diluted share, compared to earnings of \$468 million, or \$3.27 per diluted share in 2000. As subsequently discussed, the comparability of earnings was affected by merger and restructuring charges and goodwill amortization associated with the MCN Energy merger that reduced after-tax earnings by \$204 million, or \$1.32 per diluted share in 2001. The Company also recorded merger-related charges in 2000 that reduced earnings by \$16 million, or \$.12 per diluted share. See Note 3 Merger and Restructuring Charges included herein for additional information. Excluding the merger and restructuring charges and goodwill amortization, DTE Energy had 2001 earnings of \$536 million, or \$3.48 per diluted share, compared to 2000 earnings of \$484 million, or \$3.39 per diluted share. The significant improvement in earnings primarily reflects contributions from gas operations acquired in the MCN Energy merger and lower income taxes resulting from the generation of additional alternate fuels tax credits by non-regulated businesses. Partially offsetting these improvements were increased interest on long-term debt that was incurred to finance the merger and lower margins from regulated electricity operations.

Table of Contents

DTE Energy's earnings in 2000, before merger-related charges, were up \$1 million or \$.06 per share from 1999 earnings of \$483 million, or \$3.33 per share. The slight increase was due to additional tax credits partially offset by a 5% residential rate reduction provided for in the June 2000 Michigan electric industry restructuring legislation (Note 4).

Strategic direction The Company remains committed to increasing its earnings growth rate from the current 6% annual level to 8% by 2005. The growth strategy continues to be focused on strengthening the Company's core electric and gas utilities, building its portfolio of non-regulated businesses and leveraging investments in energy technology. There is no assurance that the level of earnings growth will be achieved for 2002 and later years as the growth projections assume, among other things, the realization of anticipated cost savings related to the MCN Energy acquisition, continued growth in non-regulated earnings and a midyear 2002 economic recovery. The Company expects the acquisition to provide pretax cost savings of over \$100 million annually, totaling more than \$650 million in savings over the next five years, primarily in the electric and gas utilities.

Non-regulated growth is expected to shift over the next few years from DTE Energy's current reliance on profits from coal-based fuel businesses that generate alternate fuels tax credits to growth from energy technologies, on-site energy projects, merchant generation and energy trading.

Effective January 1, 2002, DTE Energy realigned its internal and external reporting structure from six segments (Electric Utility, Gas Utility, Wholesale Marketing & Trading, Energy Services, Other Non-regulated Operations, and Corporate & Other) to three strategic business units (Energy Resources, Energy Distribution and Energy Gas) that have both regulated and non-regulated operations. Based on this structure, management establishes the company's strategic goals, allocates its resources and evaluates its performance. The realignment resulted in the following nine reportable segments:

Table of Contents

Energy Resources

Regulated operations include the power generation services of Detroit Edison, the Company's electric utility. Electricity is generated from Detroit Edison's numerous fossil plants or its nuclear plant and sold throughout Southeastern Michigan to residential, commercial, industrial and wholesale customers.

Non-regulated

Energy Services is comprised of various businesses that develop and manage energy-related assets and services. Such projects include coke production, synfuels production, independent power plants, on-site energy projects and cogeneration facilities. The economic viability of synfuels projects is tied to their generation of alternate fuels tax credits.

Wholesale Marketing & Trading consists of the electric and gas marketing and trading operations of DTE Energy Trading Company and the natural gas marketing and trading operations of DTE Enterprises, which was acquired as part of the MCN Energy merger. Wholesale Marketing & Trading enters into forwards, futures, swaps and option contracts as part of its trading strategy. Wholesale Marketing & Trading focuses on physical power marketing and structured transactions, as well as the enhancement of returns from its power plant, pipeline and storage assets.

Other non-regulated operations consist of businesses involved in coal services and landfill gas recovery along with an independent generating unit.

Energy Distribution

Regulated operations include the electric distribution services of Detroit Edison, and the electric transmission services of the International Transmission Company (ITC). Energy Distribution distributes electricity generated by Energy Resources and alternative electric suppliers to Detroit Edison's 2.1 million residential, commercial and industrial customers. The transmission assets of ITC are operated by the Midwest Independent System Operator, a regional transmission operator.

Non-regulated operations primarily consist of DTE Energy Technologies, businesses that market and distribute a broad portfolio of distributed generation products, provide application engineering, and monitor and manage system operations.

Energy Gas

Regulated operations include gas distribution services provided by MichCon, the Company's gas utility that purchases, stores and distributes natural gas throughout Michigan to 1.2 million residential, commercial and industrial customers. As previously discussed, the Company acquired MichCon on May 31, 2001, as part of the MCN Energy merger. Accordingly, the operating results of MichCon are included in the Company's consolidated results from the acquisition date.

Non-regulated operations include the exploration and production of gas and the gathering, processing and storing of gas. Certain pipeline and storage assets are used to support the Wholesale Marketing & Trading segment.

Corporate & Other includes administrative and general expenses, and interest costs of DTE Energy corporate that have not been allocated to the regulated and non-regulated businesses. Corporate & Other also includes various other non-regulated operations, including investments in new emerging energy technologies.

Energy Resources and Energy Distribution Regulated

As discussed above, Detroit Edison's electric power generation services comprise the regulated Energy Resources segment. Detroit Edison's electric distribution services and ITC's electric transmission services comprise the regulated Energy Distribution segment. The combined net income before merger and

Table of Contents

restructuring charges of these two segments decreased \$58 million in 2001 and decreased \$7 million in 2000, compared to the respective prior year periods. The table below illustrates the impact on net income as a result of the year over year change in operations of each segment. As subsequently discussed, the decline in 2001 is primarily attributable to lower commercial and industrial sales reflecting the impact of the current economic recession and customers participating in the electric Customer Choice program, as well as higher operation and maintenance costs and the impact of securitization (Note 4).

Increase (Decrease) in Income Compared to Prior Year			
(in Millions)			
	Energy Resources	Energy Distribution	Total
2001

	_____	_____	_____

Operating revenues decreased \$78 million in 2001 due to a decline in sales rates and electric sales for commercial and industrial customers. Sales rates for commercial and industrial customers were lowered by a 5% legislatively mandated rate reduction that began in April 2001. Commercial sales decreased primarily due to increased participation of customers in the electric Customer Choice program. Under this program, participating customers choose to purchase their electricity from suppliers other than Detroit Edison. However, Detroit Edison and ITC, through their Energy Distribution operations, continue to provide transmission and distribution services for these customers retaining margins from such services. Industrial sales reflect reduced auto and steel production, the impact of electric Customer Choice participation and the end of a special energy sales agreement with a large steel manufacturer in March of 2001. Partially offsetting these declines were increased revenues from residential and wholesale customers as well as higher revenues from providing other energy related services. Residential customer revenues reflect higher demand resulting from weather, partially offset by the impact of a 5% rate reduction that began in June 2000. Revenues from wholesale customers increased due to gains from settling forward sales contracts. The sales contracts were entered into to effectively close forward purchase contracts that hedged Detroit Edison's power supply costs. Accordingly, the gains from forward sales contracts were substantially offset by losses from forward purchase contracts, which are recorded as part of fuel and purchased power costs.

Table of Contents

Operating revenues in 2000 increased \$82 million over 1999 due to higher sales to commercial and industrial customers, partially offset by lower residential customer sales. Additionally, under the Power Supply Cost Recovery (PSCR) mechanism which was in effect through June 2000, Detroit Edison increased rates in January 2000 to recover higher power costs. The increased commercial and industrial sales reflected favorable economic conditions in Michigan. Industrial sales also increased due to the special sales agreement with a large steel manufacturer. The decline in residential revenues reflects reduced demand resulting from a cooler summer in 2000 and the impact of the 5% rate reduction. Wholesale sales decreased due to lower demand for energy and less availability of energy for sale. Also impacting revenues in 2000 were higher revenues from other energy-related services.

Electric Sales and Deliveries (in Thousands of MWh)	2001	2000	1999
Electric Sales			
Residential	14,503	13,903	14,064
Commercial	18,777	19,762	19,546
Industrial	14,430	16,090	15,647
Wholesale	868	2,592	3,672
Other	2,538	2,653	2,595
	<u>51,116</u>	<u>55,000</u>	<u>55,524</u>
Electric Choice (delivery only)	1,268	202	8
	<u>52,384</u>	<u>55,202</u>	<u>55,532</u>
Total Electric Sales and Deliveries	<u>52,384</u>	<u>55,202</u>	<u>55,532</u>

Fuel and purchased power expense decreased \$30 million in 2001 and increased \$165 million in 2000. The decline in 2001 is due to lower system output resulting from reduced electric sales, as well as the result of using a more favorable power supply mix reflecting increased usage of lower-cost power from the Company's generating plants and reduced usage of higher-cost purchased power. Also favorably impacting the 2001 comparison was an adjustment of a reserve associated with a contract to purchase steam at above market prices (Note 14). Additionally, losses on the settlement of forward and option contracts to hedge purchase power prices increased purchased power expense in 2001. The 2000 fuel and purchased power expense increase resulted primarily from greater reliance on higher-cost purchased power and higher purchase power prices.

Table of Contents

System output and average fuel and purchased power costs for Detroit Edison were as follows:

	<u>2001</u>	<u>2000</u>	<u>1999</u>
(in Thousands of MWh)			
Power generated and purchased			
Power plant generation			
Fossil	39,711	42,100	43,016
Nuclear	8,555	8,239	9,484
Purchased power	7,482	8,877	6,959
System output	<u>55,748</u>	<u>59,216</u>	<u>59,459</u>
Average unit cost (\$/MWh)			
Generation (1)	\$ <u>12.31</u>	\$ 12.78	\$ 12.51
Purchased power (2)	\$ <u>78.24</u>	\$ 62.57	\$ 54.80

(1) Represents fuel costs associated with power plants.

(2) The average purchased power amounts include hedging activities.

Operation and maintenance expenses increased \$96 million in 2001 and decreased \$75 million in 2000. The increase in 2001 was primarily due to expenses related to maintenance and reliability work for power generation facilities, which reduces random outages at power plants and Detroit Edison's reliance on purchased power. Additionally, the higher 2001 expenses include the cost of funding the low income and energy efficiency fund required by Michigan legislation which is recovered in current sales rates and costs allocated from DTE Energy corporate for various corporate support services. The increase was partially offset by synergy cost savings related to the MCN Energy merger.

The decrease in 2000 operation and maintenance expenses resulted primarily from lower costs associated with restoring power to customers who lost service during severe storms, as well as the elimination of computer system related costs associated with year 2000 (Y2K) initiatives.

Depreciation and amortization expense decreased \$75 million in 2001 and increased \$16 million in 2000. The 2001 decline reflects the extension of the amortization period from seven years to 15 years for certain regulatory assets that were securitized in March 2001 (Note 4), partially offset by depreciation on higher levels of plant in service. The increase in 2000 was due to increased levels of plant in service and the accelerated amortization of unamortized nuclear costs.

Taxes other than income decreased \$15 million in 2001 and increased \$14 million in 2000. The improvement in 2001 is attributed to an adjustment in property tax expense reflecting a change in method of calculating the taxable value of personal property subject to taxation by local taxing jurisdictions. New valuation tables approved by the Michigan State Tax Commission more accurately recognize the impact of regulation on the value of a utility's personal property based on the property's age. Partially offsetting the 2001 decline and resulting in the 2000 increase were property taxes associated with higher property balances. Lower Michigan Single Business Taxes also affected both years.

Interest expense and other increased \$25 million in 2001 due primarily to debt issued for securitization, partially offset by redemptions of higher cost debt with the proceeds of the securitization bonds (Note 10). Detroit Edison completed the redemption of debt with securitization proceeds in 2001.

Outlook Management expects electric system sales to remain relatively flat in 2002 due to the current economic recession and to grow modestly beginning in 2003 for the regulated operations of the Energy Resources and Energy Distribution segments. The state of Michigan continues its initiatives to restructure

Table of Contents

the electric industry by increasing competition among alternative suppliers of electric generation services. Effective January 1, 2002, the electric Customer Choice program was expanded whereby all electric customers can choose to purchase their electricity from suppliers other than their local utility (Note 4). Prior to January 2002, electric restructuring legislation limited customer participation in the electric Customer Choice program.

Detroit Edison does not earn generation margins on electricity sales to customers who choose to participate in the electric Customer Choice program. However, Detroit Edison and ITC, through their Energy Distribution operations, will continue to earn margins from providing transmission and distribution delivery services to participating customers. Detroit Edison expects to lose 5% to 8% of its sales as a result of customers choosing to participate in electric Customer Choice during 2002. As subsequently discussed, Michigan Public Service Commission (MPSC) orders issued in December 2001 could result in higher numbers of retail customers being lost to electric Customer Choice. Detroit Edison expects to sell more electricity in the wholesale market as a result of the available capacity left by customers participating in electric Customer Choice. The additional wholesale revenues are expected to partially offset any decline in revenues from retail customers.

The MPSC issued orders in December 2001 which are designed to increase customer participation in the electric Customer Choice program and allow Detroit Edison to recover costs related to its generation operations that may not otherwise be recoverable (stranded costs) due to electric Customer Choice related lost sales and margins. The MPSC essentially determined that electric Customer Choice customers should not pay a securitization and tax surcharge that other customers are required to pay and will continue to be credited with an additional 5% rate reduction which is funded by savings from securitization. These provisions will likely result in Detroit Edison's power costs being higher than that of alternative suppliers, encouraging additional customer participation in the electric Customer Choice program.

As a result of the MPSC orders, Detroit Edison would recover the net stranded costs associated with its electric generation operations. Specifically there would be an annual filing with the MPSC comparing actual revenues from generation services to the revenue requirements, including an allowance for the cost of capital, to recover the costs of generation operations. The MPSC in its orders determined that Detroit Edison had no stranded costs using 2000 data, established a zero 2002 transition charge and deferred the issues of refining the net stranded costs methodology and the recalculating of net stranded costs to 2002. Detroit Edison has substantive issues with the MPSC's methodology of calculating stranded costs and has asked for rehearing, clarification and substantial changes on certain aspects of the order. For further information concerning the electric Customer Choice program and industry restructuring, see Note 4-Regulatory Matters-Electric Industry Restructuring-Michigan Legislation.

Future operating results of regulated Energy Resources and Energy Distribution will also vary with a variety of other external factors such as weather, the cost of fuel and purchased power, and changes in economic conditions. The current economic recession has lowered margins from commercial and industrial customers in the latter half of 2001 and is expected to unfavorably impact margins through the first half of 2002.

Management expects to meet the challenges of the recession, electric Customer Choice and the imposed retail rate freezes by, among other actions, reducing costs at Detroit Edison as a result of the acquisition of MCN Energy and its wholly owned gas utility, MichCon. Approximately 35% of Detroit Edison's 2.1 million customers are also customers of MichCon. Detroit Edison and MichCon have begun and expect to continue realizing synergies from integrated common, duplicative functions.

As a result of the continued restructuring of the electric industry, DTE Energy is currently contemplating the sale of ITC. Any divestiture will be independently evaluated to maximize shareholder value.

Table of Contents

Energy Resources Non-Regulated

Energy Services

Net income increased \$15 million in 2001 and \$23 million in 2000. The improvement in both periods is attributed to an increased generation of alternate fuels tax credits which totaled \$165 million in 2001, compared to \$130 million in 2000 and \$116 million in 1999. The higher tax credits reflect an increased level of operations, and the addition of three new synfuels projects in 2001. Additionally, results reflect increased contributions from the coal services business and the biomass landfill gas recovery operation. Gains on the sale of minority interests in two coke battery projects in 2001 were offset by reduced levels of income generated by the projects. The improved earnings were partially offset by increased new project development costs.

Outlook - The Energy Services segment's objective is to continue developing and relocating synfuel projects and to focus on on-site energy projects and independent power projects. Management expects three new synfuel sites, two electric generation projects and two industrial on-site energy projects to become operational in 2002. Contributions from new synfuel projects will be partially offset by reduced earnings from coke battery projects due to the expiration of related alternate fuels tax credits at the end of 2002. Additionally, tax credits from synfuel projects will expire at the end of 2007 with the possibility of being extended. The focus of this business, which had primarily been to develop, construct, own and operate projects, will shift for the near term to acquiring operating assets or existing projects under construction.

Wholesale Marketing & Trading

Wholesale Marketing & Trading's income totaled \$44 million in 2001, an increase of \$34 million from 2000. Income in 2000 increased a slight \$2 million from 1999. The electric marketing and trading portion of the segment contributed \$8 million in 2001, representing realized margins primarily associated with short-term, back-to-back, physical power purchases and sales. The gas portion of the segment contributed the remaining \$36 million, representing mark-to-market gains on long-term gas sales contracts with several cogeneration facilities.

Commodity price risk of the Wholesale Marketing & Trading segment are managed by utilizing derivative financial contracts to offset the risk inherent in its portfolio of electric and gas supply and sales agreements. The segment's objective is to enter into new transactions that are hedgeable and profitable from an economic standpoint. Wholesale Marketing & Trading accounts for this risk minimization strategy by marking to market its commodity forwards, financial derivatives, and corresponding physical positions so there are substantial offsetting amounts. This fair value accounting better aligns financial reporting for the segment with the way management manages the business and measures its performance.

In 2001, Wholesale Marketing & Trading experienced earnings volatility as a result of its production-related gas supply as well as from open positions related to its long-term gas transportation and storage assets. The segment receives gas produced from DTE Energy's exploration & production (E&P) operations which is used to meet its commitments under long-term contracts with cogeneration customers. The E&P gas does not qualify for mark-to-market accounting. Wholesale Marketing & Trading recorded a gain in 2001 totaling approximately \$50 million, net of taxes, primarily attributable to marking to market sales contracts with power generation customers without recording an offsetting loss from marking to market the production-related gas supply. In December 2001, Wholesale Marketing & Trading entered into hedge transactions that substantially mitigate the earnings volatility related to the gas contracts with power generation customers.

Table of Contents

Wholesale Marketing & Trading operates a storage trading strategy primarily utilizing the facilities owned and operated by DTE Energy. Employing a combination of physical and financial contracts, in conjunction with the injection and withdrawal capabilities of the storage fields, the segment is able to capture seasonal price spreads. As forward prices change, the timing of the physical flow of gas is optimized to obtain the highest margin. Trades under this strategy are marked to market against the forward curve. Physical gas in storage, however, is marked to the current spot price under fair value accounting rules. This difference in accounting for forward trades and gas in storage occasionally results in earnings volatility when price changes in the spot month do not correspond with those in future delivery months. Gas in storage in December 2001 was priced at a spot market rate of \$2.77 per Mcf, compared to a May 31, 2001, merger date rate of \$5.28 per Mcf. Significantly smaller changes in forward prices occurred during these same periods. As a result, the mark-to-market losses on gas inventory were only partially offset by mark-to-market gains on the storage-related derivatives.

Outlook Wholesale Marketing & Trading will focus on expanding its coverage within existing markets in the northeast and midwest United States and eastern Canada. Gas storage and transportation capacity enhances its ability to provide reliable and custom tailored, bundled services to large-volume end users and utilities. This capacity, coupled with the synergies from DTE Energy's other businesses, positions the segment to capitalize on opportunities for expansion of its market base.

Wholesale Marketing & Trading manages commodity price risk by utilizing derivative financial contracts to more fully balance its portfolio of gas and electric supply and sales agreements. Wholesale Marketing & Trading attempts to maintain a balanced or flat book from an economic standpoint. However, Wholesale Marketing & Trading will experience earnings volatility as a result of open positions related to long-term gas transportation contracts with third parties and due to fluctuations in inventory valuations. The Company is currently evaluating various hedge strategies related to these assets.

Other

Non-regulated other net income increased by \$13 million in 2001 and decreased by \$8 million in 2000.

Energy Distribution Non-Regulated

The non-regulated operations of the Energy Distribution business segment produced a consistent loss of \$10 million in 2001, 2000 and 1999 due primarily to expenses associated with the start-up of the distributed generation business.

Outlook The Company will continue to invest in emerging technologies, and various other energy operations. Growth in future years is expected from the successful development and marketing of various distributed generation products, including standby generators, external combustion engines, mini-turbines and fuel cells.

Table of Contents**Energy Gas**

Regulated had net income before merger and restructuring charges of \$23 million for the seven months in 2001. As previously discussed, DTE Energy acquired MichCon on May 31, 2001, as part of the MCN Energy merger. Accordingly, the operating results of MichCon are included in the Company's consolidated results from the acquisition date. The pro forma impact of MCN Energy on the Company is included in Note 2 MCN Energy Acquisition.

(Dollars in Millions)	2001	
	\$	Bcf
Gas Statistics		
Operating revenues		
Gas sales	491	95
End user transportation	50	81
Intermediate transportation	26	304
Other	36	-
	<u>603</u>	<u>480</u>
Cost of Gas Sold	296	n/a
	<u>296</u>	<u>n/a</u>
Gross Margin Actual	307	n/a
Impact of weather warmer than normal	20	14
	<u>327</u>	<u>494</u>
Gross Margin Weather Normalized	327	494
	<u>327</u>	<u>494</u>

Gas sales and end user transportation services generated 80% of total gross margins for the regulated Energy Gas segment. Margins from providing gas sales and end user transportation services are seasonal and weather dependent with the majority of profits generated in the colder first and fourth quarters. Mild weather, which was 20% warmer than normal in the fourth quarter of 2001, reduced gross margins by \$20 million (\$13 million after taxes) and reduced gas sales by 14 billion cubic feet (Bcf).

Gas sales represent the sale and delivery of natural gas primarily to residential and small-volume commercial and industrial customers. Through December 2001, MichCon operated under a Gas Sales Program in which its sales rates included a gas commodity component that was fixed at \$2.95 per thousand cubic feet (Mcf). Under this program, MichCon had commodity price risk associated with its ability to secure gas supplies at prices less than \$2.95 per Mcf. As discussed in the Outlook section that follows, MichCon returned to a Gas Cost Recovery (GCR) mechanism in January 2002 and no longer has commodity price risk. End user transportation represents a gas delivery service for customers, including customer choice customers, who purchase natural gas directly from producers or brokerage companies and contract with MichCon to deliver that gas to their premises.

Intermediate transportation services represents a gas delivery service for producers, brokers and other gas companies that own the natural gas but are not the ultimate consumers. Although intermediate transportation volumes are a significant part of total deliveries, profit margins on this service are considerably less than margins on gas sales and end user transportation services. Intermediate transportation deliveries include volumes associated with fixed-fee customers. Transportation volumes for fixed-fee customers may fluctuate, however revenues from such customers are not affected.

Other operating revenues include late payment fees, appliance maintenance services and other gas-related services.

Cost of gas is affected by variations in gas sales volumes, cost of purchased gas and related transportation costs, and the effects of any permanent liquidation of inventory gas which is accounted for under the last-in first-out (LIFO) method. The 2001 results benefited from a 2.1 Bcf liquidation in inventory gas that was

Table of Contents

priced at \$0.39 per Mcf. The 2001 average gas purchase rate was \$2.83 per Mcf higher than the average LIFO liquidation rate.

Outlook Management's objective for regulated Energy Gas is to expand its role as the preferred provider of natural gas and high-value energy services within Michigan. Management expects to improve the cost competitiveness of Energy Gas as a result of the merger. Approximately 60% of MichCon's 1.2 million customers are also customers of Detroit Edison. Management expects contributions from the regulated Energy Gas segment to increase significantly in 2002 when the financial results reflect a full 12 months of DTE Energy owning MichCon.

The MPSC is continuing its initiatives designed to give all of Michigan's natural gas customers added choices and the opportunity to benefit from lower gas costs resulting from competition. In December 2001, the MPSC issued an order that continues the gas Customer Choice program on a permanent and expanding basis beginning with the conclusion of the three-year temporary program on March 31, 2002. Under the expanded program, beginning April 1, 2002, up to approximately 40% of customers could elect to purchase gas from suppliers other than MichCon. Beginning in April 2003, up to approximately 60% of customers could participate and beginning April 2004, all 1.2 million of MichCon's gas customers could choose to participate. MichCon will continue to transport and deliver the gas to the participating customers' premises at prices that generate favorable margins. As of December 2001, approximately 30,000 customers were participating in the temporary gas Customer Choice program.

Under the MPSC order, MichCon returned to a GCR mechanism upon termination of its three-year experimental Gas Sales Program in December 2001. MichCon's gas sales rates will now include a gas commodity component designed to recover its actual gas costs. For further information concerning the gas Customer Choice and Gas Sales Programs, see Note 4-Regulatory Matters-Gas Industry Restructuring.

Future operating results of regulated Energy Gas will vary as a result of weather and changes in economic conditions. The current economic recession and the significantly warmer 2001-2002 winter lowered margins from residential, commercial and industrial customers in the latter half of 2001.

Energy Gas - Non-regulated

For the seven-month period ended December 31, 2001, the non-regulated operations of the Energy Gas business segment contributed \$11 million in net income.

Outlook - The Company will consider further developing its gas production properties in northern Michigan and its pipelines, processing and storage assets. Non-strategic operations acquired with the MCN Energy merger will be sold to partially fund non-regulated growth.

Corporate & Other

Results from Corporate & Other improved by \$14 million in 2001 and declined by \$9 million in 2000. The improvement in 2001 reflects the allocation of corporate support expenses to regulated and non-regulated operations as well as reduced interest expense resulting from the repayment of debt with proceeds received from Detroit Edison. Upon issuing \$1.75 billion of securitization bonds, Detroit Edison distributed approximately 50% of such proceeds to DTE Energy corporate. DTE Energy used such proceeds to retire debt and repurchase common shares. The Corporate & Other decrease in 2000 reflects higher interest expense and corporate support expenses.

Table of Contents**CAPITAL RESOURCES AND LIQUIDITY**

	<u>2001</u>	<u>2000</u>	<u>1999</u>
Cash and Cash Equivalents			
(in Millions)			
Cash Flow From (Used For)			
Operating activities	\$ 811	\$ 1,015	\$ 1,084
Investing activities	(2,286)	(674)	(712)
Financing activities	1,679	(310)	(469)
Net Increase (Decrease) in Cash and Cash Equivalents	<u>\$ 204</u>	<u>\$ 31</u>	<u>\$ (97)</u>

Operating Activities

DTE Energy's consolidated net cash from operating activities decreased \$204 million in 2001 and \$69 million in 2000. The decline in 2001 resulted primarily from higher working capital requirements partially offset by higher net income, after adjusting for noncash items (depreciation, amortization, deferred taxes and certain restructuring charges). The higher working capital primarily reflects the seasonal requirements in the second half of 2001 of the gas business where cash is used to finance increases in gas inventories and customer accounts receivable. The Company uses its cash derived from operating activities primarily to maintain and expand its core electric and gas utility businesses and to build non-regulated businesses. In addition, the Company uses cash from operations to retire long-term debt and to pay dividends. The decline in 2000 resulted from lower net income, after adjusting for noncash items, partially offset by lower working capital requirements.

Investing Activities

DTE Energy's consolidated net cash used for investing activities increased \$1.6 billion in 2001 and decreased \$38 million in 2000. The increase in 2001 was due primarily to the acquisition of MCN Energy in May 2001 and the capital expenditures in regulated and non-regulated businesses, partially offset by proceeds from the sale of non-strategic assets. The higher regulated capital expenditures at Detroit Edison are attributable to new air quality regulations, which require the reduction in nitrogen oxide levels as discussed in the Environmental Matters section that follows. The decline in 2000 is attributable to a reduction in restricted cash.

Financing Activities

DTE Energy's consolidated net cash related to financing activities increased \$2 billion in 2001 and decreased \$159 million in 2000. The increase in 2001 was due primarily to the issuance of \$1.75 billion of securitization bonds and the issuance of \$1.35 billion of long-term debt to finance the cash consideration portion of the acquisition of MCN Energy. Proceeds from the securitization bonds were used to repay debt and repurchase approximately \$424 million of DTE Energy common stock. In addition, Detroit Edison issued \$840 million of long-term debt. These proceeds, coupled with proceeds from securitization, were used for general corporate purposes including the redemption of \$1.27 billion of higher cost debt, of which \$1.11 billion represented unscheduled redemptions. MichCon issued \$200 million of long-term debt and used the proceeds for general corporate purposes, including the redemption of \$40 million of unscheduled debt. Net cash used for financing activities was lower in 2000 due to decreased redemptions of long-term debt, partially offset by repurchases of common stock.

Table of Contents

During 2001, the Company, Detroit Edison and MichCon entered into a bank facility arrangement used to support commercial paper in the amounts of \$800 million, \$300 million and \$300 million, respectively. Commercial paper is usually issued in lieu of an equivalent amount of borrowings under these lines of credit. Amounts outstanding under this facility at December 31, 2001, were \$423 million at the Company and \$254 million at MichCon.

Outlook - DTE Energy's strategic direction will result in capital investments and expenditures in 2002 totaling approximately \$950 million, of which approximately \$200 million will be in non-regulated businesses and the remaining \$750 million in regulated electric and gas operations. Approximately \$200 million of the regulated capital expenditures will be incurred by Detroit Edison to comply with new ozone and air quality regulations.

The proposed level of investments and expenditures in future years is expected to be financed primarily with internally generated funds, proceeds from the sale of non-strategic assets and debt. DTE Energy's capitalization objective is to maintain its strong credit ratings through a strong balance sheet. Its capitalization objective is a 50% - 55% leverage target. Management believes that the Company and its subsidiaries will have sufficient capital resources to meet anticipated capital requirements.

CRITICAL ACCOUNTING POLICIES

There are three key types of transactions presented in the consolidated financial statements that require considerable judgment and estimation. Such transactions relate to regulatory assets and liabilities, risk management and trading activities and alternate fuels tax credits.

Regulation

A significant portion of the Company's business is subject to regulation. Detroit Edison's electric distribution operations, MichCon's gas distribution and transportation operations and the transmission operations of International Transmission Company (ITC) currently meet the criteria of Statement of Financial Accounting Standards (SFAS) No. 71, Accounting for the Effects of Certain Types of Regulation, which results in differences in the application of generally accepted accounting principles between regulated and non-regulated businesses. SFAS No. 71 requires the recording of regulatory assets and liabilities for certain transactions that would have been treated as revenue and expense in non-regulated businesses. Future regulatory changes or changes in the competitive environment could result in the Company discontinuing the application of SFAS No. 71 for some or all of its businesses and require the write-off of the portion of any regulatory asset or liability that was no longer probable of recovery or refund. If Detroit Edison (excluding its subsidiary, The Detroit Edison Securitization Funding LLC) were to have discontinued the application of SFAS No. 71 for all of its operations as of December 31, 2001, it would have had an extraordinary noncash charge to income of approximately \$58 million. If MichCon were to have discontinued the application of SFAS No. 71, it would have had an extraordinary noncash increase to income of approximately \$60 million. There would be no significant impact to earnings if ITC were to discontinue its application of SFAS No. 71. Management believes that currently available facts support the continued application of SFAS No. 71 and that all regulatory assets and liabilities are recoverable or refundable through the current rate environment.

Risk Management and Trading Activities

All derivatives are recorded at fair value and shown as Assets or liabilities from risk management and trading activities in the consolidated statement of financial position. Risk management activities are accounted for in accordance with SFAS No. 133, Accounting for Derivative Instruments and Hedging Activities. Trading activities are accounted for in accordance with Emerging Issues Task Force Issue No. 98-10, Accounting for Energy Trading and Risk Management Activities. Except for the activities

Table of Contents

of the Wholesale Marketing & Trading segment, the Company does not hold or issue derivative instruments for trading purposes.

The offsetting entry to Assets or liabilities from risk management and trading activities is to other comprehensive income or earnings depending on the use of the derivative and whether it is designated and qualifies for hedge accounting. The fair values of derivative contracts are adjusted each accounting period for changes in the market and are derived from: i) published exchange traded market data; ii) prices from external sources; and iii) prices based on valuation models. Market quotes are more readily available for short duration contracts. The Company has derivative contracts extending to 2016.

Alternate Fuels Tax Credits

DTE Energy generated \$165 million in alternate fuels tax credits in 2001, up from \$130 million in 2000 and \$116 million in 1999. Outside firms assist the Company in calculating the tax credits and evaluating their realizability.

ENVIRONMENTAL MATTERS

Protecting the environment from damage, as well as correcting past environmental damage, continues to be a focus of state and federal regulators. Legislation and/or rulemaking could further impact the electric utility industry including Detroit Edison. The U.S. Environmental Protection Agency (EPA) and the Michigan Department of Environmental Quality have aggressive programs regarding the clean-up of contaminated property. The EPA initiated enforcement actions against several major electric utilities citing violations of new source provisions of the Clean Air Act. Detroit Edison received and responded to information requests from the EPA on this subject. The EPA has not initiated proceedings against Detroit Edison. The National Energy Policy Development Group has undertaken a review of the EPA's interpretation of regulations applying to new source review requirements. The Company expects this review to focus on the ability of fossil-fueled plant owners to perform plant maintenance without additional significant environmentally related modifications. While the Company anticipates a continued ability to economically maintain its plants, the outcome of this governmental review cannot be predicted.

EPA ozone transport regulations and final new air quality standards relating to ozone and particulate air pollution will impact the Company. Detroit Edison has spent approximately \$221 million through December 2001 and estimates that it will incur approximately \$400 million to \$500 million of future capital expenditures over the next three years to comply.

NEW ACCOUNTING PRONOUNCEMENTS

Effective January 1, 2001, the Company adopted SFAS No. 133, Accounting for Derivative Instruments and Hedging Activities. SFAS No. 133 establishes accounting and reporting standards for derivative instruments, including certain derivative instruments embedded in other contracts, and for hedging activities.

In June 2001, the Financial Accounting Standards Board (FASB) issued SFAS No. 141, Business Combinations, and No. 142, Goodwill and Other Intangible Assets. The most significant change made by SFAS No. 141 requires that the purchase method of accounting be used for all business combinations. The most significant changes made by SFAS No. 142 are that the amortization of goodwill will cease, and goodwill and indefinite-lived intangible assets will be tested for impairment at least annually. In June 2001, the FASB issued SFAS No. 143, Accounting for Asset Retirement Obligations. This statement requires that the fair value of an asset retirement obligation be recognized in the period in which it is incurred. In August 2001, the FASB issued SFAS No. 144, Accounting for

Table of Contents

the Impairment or Disposal of Long-Lived Assets. This statement establishes a single accounting model for long-lived assets to be disposed of by sale, whether previously held and used or newly acquired.

See Note 1 Significant Accounting Policies for a further discussion of these pronouncements.

CONTRACTUAL OBLIGATIONS

The following table reflects the payments due by period for the Company's contractual obligations existing at December 31, 2001:

(in Millions)	Payments Due by Period				
	Total	Less Than 1 Year	1-3 Years	4-5 Years	After 5 Years
Contractual Obligations					
Long-Term Debt:					
Mortgage bonds, notes & other	\$ 6,321	\$ 429	\$ 668	\$ 930	\$ 4,294
Securitization bonds	1,746	73	177	201	1,295
Capital Lease Obligations	147	21	27	25	74
Operating Leases	102	19	34	22	27
Unconditional Purchase Obligations	2,405	552	753	315	785
Other Long-Term Obligations	671	15	293	29	334
Total Obligations	\$ 11,392	\$ 1,109	\$ 1,952	\$ 1,522	\$ 6,809

The Company expects that its 2002 capital expenditures will approximate \$950 million. Certain commitments have been made in connection with such capital expenditures and are excluded from the above table.

FAIR VALUE OF CONTRACTS

The following table reflects the maturity and sources of the net fair value gain (loss) of contracts at December 31, 2001:

Table of Contents

(in Millions)	Maturity Less Than 1 Year	Maturity 1-3 Years	Maturity 4-5 Years	Maturity Exceeding 5 Years	Total Fair Value
Trading Activities					
Prices From:					
Quotes	\$ 32	\$ 5	\$ 4	\$	\$ 41
External sources	14				14
Other sources		3	1		4
	<u>\$ 46</u>	<u>\$ 8</u>	<u>\$ 5</u>	<u>\$</u>	<u>59</u>
Risk Management Activities					(248)
Total Assets & Liabilities from Risk Management and Trading Activities					<u>\$ (189)</u>

The Prices from quotes category represents the Company's positions for which forward price curves were developed using published NYMEX exchange prices and over the counter (OTC) gas and power quotes. The NYMEX currently publishes gas futures prices for the next six years.

The Prices from external sources category represents the Company's forward positions in power at points for which OTC broker quotes are not always directly available. The Company values these positions against internally developed forward market price curves that are constantly validated and recalibrated against OTC broker quotes for closely correlated points. This category also includes strip transactions whose prices are obtained from external sources and then modeled to daily or monthly prices as appropriate.

The Prices from other sources category contains the value of transactions for which an internally developed price curve was constructed as a result of the long dated nature of the transaction or the illiquidity of the market point.

A reconciliation of the Company's estimated net fair value of trading contracts follows:

(in Millions)	
Fair value at January 1, 2001	\$ 17
Plus: contracts acquired upon acquisition of MCN Energy	12
Less: contracts realized during 2001	(33)
Other changes in fair value	63
	<u> </u>
Fair value at December 31, 2001	<u>\$ 59</u>

INDEPENDENT AUDITORS' REPORT

To the Board of Directors and Shareholders of
DTE Energy Company

We have audited the consolidated statements of financial position of DTE Energy Company and subsidiaries (the "Company") as of December 31, 2001 and 2000, and the related consolidated statements of operations, cash flows, and changes in shareholders' equity for each of the three years in the period ended December 31, 2001. Our audits also included the financial statement schedule appearing on page 86. These financial statements and financial statement schedule are the responsibility of the Company's management. Our responsibility is to express an opinion on the consolidated financial statements and financial statement schedule based on our audits.

We conducted our audits in accordance with auditing standards generally accepted in the United States of America. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

In our opinion, such consolidated financial statements present fairly, in all material respects, the financial position of DTE Energy Company and subsidiaries at December 31, 2001 and 2000, and the results of their operations and their cash flows for each of the three years in the period ended December 31, 2001 in conformity with accounting principles generally accepted in the United States of America. Also, in our opinion, such financial statement schedule, when considered in relation to the basic consolidated financial statements of the Company taken as a whole, present fairly, in all material respects, the information set forth therein.

As discussed in Note 13 to the consolidated financial statements, the Company changed its method of accounting for derivative instruments and hedging activities in 2001.

/s/ DELOITTE & TOUCHE LLP

Detroit, Michigan

DTE Energy Company
Notes to Consolidated Financial Statements

NOTE 1 SIGNIFICANT ACCOUNTING POLICIES

Corporate Structure

DTE Energy Company (DTE Energy or the Company), a Michigan corporation incorporated in 1995, is an exempt holding company under the Public Utility Holding Company Act of 1935. The Company is the parent holding company of The Detroit Edison Company (Detroit Edison), the International Transmission Company (ITC), DTE Enterprises Inc. (Enterprises), and other subsidiaries engaged in energy trading, energy services and other energy-related businesses.

Detroit Edison is a Michigan public utility engaged in the generation, purchase, distribution and sale of electric energy to 2.1 million customers in a 7,600-square-mile Southeastern Michigan service area and is regulated by the Michigan Public Service Commission (MPSC).

ITC is regulated by the Federal Energy Regulatory Commission (FERC) for the transmission of electric energy. Effective January 2001, the transmission assets of Detroit Edison were transferred to ITC, then a wholly owned subsidiary of Detroit Edison. In May 2001, Detroit Edison distributed 100% of the shares of ITC to the Company.

On May 31, 2001, the Company completed the acquisition of MCN Energy Group Inc. (MCN Energy), now Enterprises, as further discussed in Note 2. Enterprises (an exempt holding company under the Public Utility Holding Company Act of 1935) is a Michigan corporation primarily involved in natural gas production, gathering, processing, transmission, storage, distribution and energy marketing. Enterprises' largest subsidiary, Michigan Consolidated Gas Company (MichCon), is a natural gas utility serving 1.2 million customers in a 14,700-square-mile area in Michigan. MichCon is regulated by the MPSC for the distribution and intrastate transportation of natural gas.

Principles of Consolidation

The Company consolidates all majority owned subsidiaries. The Company accounts for non-majority owned investments, including investments in limited liability companies, partnerships and joint ventures, under the equity method when the Company is able to influence the financial operating policies of the investee. For all other investments, the Company applies the cost method. The Company eliminates all intercompany balances and transactions.

Basis of Presentation

The accompanying consolidated financial statements were prepared in conformity with accounting principles generally accepted in the United States of America. In connection with their preparation, management makes estimates and assumptions that affect the reported amounts of assets, liabilities, revenues and expenses, and the disclosure of contingent assets and liabilities. Actual results could differ from those estimates.

The Company reclassified certain prior year balances to conform to the 2001 presentation.

Table of Contents

Revenues

Revenues from deliveries of electricity and the transportation and storage of natural gas are recognized as services are provided. Detroit Edison and MichCon accrue revenues for electric, gas and steam heating services provided but unbilled at month-end. Pursuant to a June 2000 MPSC order, Detroit Edison's rates are frozen for all classes of customers through 2003. Through December 2001, MichCon's rates included a component for cost of gas sold that was fixed at \$2.95 per thousand cubic feet (Mcf). Effective January 2002, MichCon implemented a gas cost recovery (GCR) mechanism that will allow it to recover the prudent and reasonable cost of gas sold through annual proceedings before the MPSC. The Company's Wholesale Marketing & Trading segment applies mark-to-market accounting with unrealized gains and losses recorded to earnings for commodity forwards, financial derivatives and corresponding physical positions.

Comprehensive Income

The Company complies with the provisions of Statement of Financial Accounting Standards (SFAS) No. 130, Reporting Comprehensive Income, which establishes standards for the reporting and display of comprehensive income. SFAS No. 130 defines comprehensive income as the change in common shareholders' equity during a period from transactions and events from non-owner sources, including net income.

Cash Equivalents and Restricted Cash

For purposes of the Consolidated Statement of Cash Flows, the Company considers investments purchased with a maturity of three months or less to be cash equivalents. Cash required to be maintained for debt service requirements is classified as restricted cash.

Inventories

Materials and supplies at Detroit Edison, MichCon and other subsidiaries are valued at average cost. Detroit Edison also values its fuel inventory at average cost.

Gas inventory at MichCon is determined using the last-in, first-out (LIFO) method. At December 31, 2001, the replacement cost of gas remaining in storage exceeded the \$6.2 million LIFO cost by \$90.9 million. During 2001, MichCon liquidated 2.1 billion cubic feet (Bcf) of prior years' LIFO layers at an average cost of \$0.39 per Mcf. MichCon's average gas purchase rate in 2001 was \$2.83 per Mcf higher than the average LIFO liquidation rate. Applying LIFO cost in valuing the liquidation, as opposed to using the average purchase rate, decreased 2001 cost of gas by \$5.8 million and increased earnings by \$3.8 million, net of taxes.

In the Wholesale Marketing & Trading segment, gas inventory is priced using the fair value method.

\$9,543 \$7,387

Property is stated at cost and includes construction-related labor and materials. Expenditures for maintenance and repairs are charged to expense as incurred, except for Fermi 2. The cost of properties retired plus removal costs, less salvage, at Detroit Edison and MichCon is charged to accumulated depreciation.

The Company bases depreciation provisions for utility property at Detroit Edison and MichCon on straight-line and units of production rates approved by the MPSC. The composite depreciation rate for Detroit Edison was 3.4% in 2001 and 2000, and 3.3% in 1999. The composite depreciation rate for MichCon was 3.9% in 2001.

Non-regulated property is depreciated over its estimated useful lives using straight-line, declining-balance and units of production methods.

Detroit Edison accrues in advance the incremental costs, including maintenance activities, that it anticipates incurring during the next scheduled Fermi 2 refueling outage. Detroit Edison began accruing approximately \$21 million on a pro-rata basis over an 18-month period beginning in November 2001 for the next scheduled refueling outage in the spring of 2003.

Natural Gas and Oil Exploration and Production

The successful efforts method of accounting is followed for investments in oil and gas properties. Under the successful efforts method, the Company capitalizes the costs of property acquisitions, successful exploratory wells, development costs, and support equipment and facilities. It expenses unsuccessful exploratory wells when they are determined to be non-productive. It also expenses production costs, overheads, and exploration costs other than exploratory drilling. Depreciation and depletion of proved

Table of Contents

oil and gas properties are determined using the units-of-production method over the life of the proved reserves.

Long-Lived Assets

Long-lived assets held and used by the Company are reviewed for impairment whenever events or changes in circumstances indicate that the carrying amount of an asset may not be recoverable. If the carrying amount of the asset exceeds the expected future cash flows expected to be generated by the asset, an impairment loss is recognized, and the asset is written down to its estimated fair value. Assets to be disposed of are reported at the lower of the carrying amount or fair value less costs to sell.

Software Costs

The Company capitalizes the cost of software developed for internal use. These costs are amortized on a straight-line basis over a maximum period of five years, beginning with the project's completion.

Deferred Debt Costs

The costs related to the issuance of long-term debt are amortized over the life of each issue. In accordance with MPSC regulations applicable to Detroit Edison and MichCon, the unamortized discount, premium and expense related to debt redeemed with a refinancing are amortized over the life of the replacement issue. Discount, premium and expense on early redemptions of debt are charged to earnings if they relate to the generation business of Detroit Edison or other non-regulated operations of the Company.

Issuance of Stock by Equity Investees

The Company's policy is to recognize gains and losses for the change in its proportionate share of an investee's equity resulting from additional equity raised by the investee. Plug Power Inc. was founded in 1997 as a joint venture of the Company and Mechanical Technology Incorporated to design and develop on-site electric power generation systems utilizing fuel cells. In October 1999, Plug Power completed an initial public offering (IPO) of common stock at \$15 per share. After the IPO, the Company owned approximately 32% of Plug Power's outstanding common stock. Since Plug Power is considered a development stage company, generally accepted accounting principles require the Company to record gains and losses from Plug Power stock issuances as an adjustment to equity. As a result of Plug Power's IPO, the Company recorded an increase of \$44 million in its investment and an after-tax increase of \$28 million to equity in 1999. In July 2001, Plug Power completed another public offering of common stock at \$12 per share. After this public offering, the Company owned approximately 28% of Plug Power's outstanding common stock and recorded an increase of \$17 million in its investment and an after-tax increase of \$11 million to equity.

Recently Issued Accounting Pronouncements

Derivatives - Effective January 1, 2001, the Company adopted SFAS No. 133, Accounting for Derivative Instruments and Hedging Activities, as amended. SFAS No. 133 establishes accounting and reporting standards for derivative instruments, including certain derivative instruments embedded in other contracts, and for hedging activities. SFAS No. 133 requires that companies recognize all derivatives as either assets or liabilities measured at fair value on the statement of financial position. SFAS No. 133 provides an exception for certain contracts that qualify as normal purchases and sales. To qualify for this exception, certain criteria must be met, including that it must be probable that the contract will result in physical delivery.

Table of Contents

See Note 13 Financial and Other Derivative Instruments herein for additional information.

Business Combinations, Goodwill and Intangible Assets - In June 2001, the Financial Accounting Standards Board (FASB) issued SFAS No. 141, Business Combinations, and No. 142, Goodwill and Other Intangible Assets.

The most significant changes made by SFAS No. 141 are: 1) requiring that the purchase method of accounting be used for all business combinations initiated after June 30, 2001; and 2) establishing specific criteria for the recognition of intangible assets separately from goodwill.

SFAS No. 142 primarily addresses the accounting for acquired goodwill and intangible assets. The most significant changes made by SFAS No. 142 are: 1) amortization of goodwill will cease, and goodwill and indefinite-lived intangible assets will be tested for impairment at least annually; and 2) the amortization period of intangible assets with finite lives will continue to be amortized over their useful lives, but will no longer be limited to 40 years.

The Company adopted SFAS No. 141, beginning July 1, 2001, and adopted SFAS No. 142, effective January 1, 2002. These standards only permit prospective application of the new accounting; accordingly, their adoption will not affect previously reported Company financial information. Goodwill was amortized by the Company through December 2001 using the straight-line method principally over 40 years. The Company ceased the amortization of goodwill on January 1, 2002, and will perform an assessment to determine whether goodwill is impaired. The Company will have a transition period from January 1, 2002 to June 30, 2002 to assess the fair value of each reporting unit and determine if goodwill has been impaired. The Company has not yet determined the impact of the adoption of SFAS No. 142 on the consolidated financial statements. The Company recorded approximately \$29 million of goodwill amortization in 2001.

Asset Retirement Obligations - In June 2001, the FASB issued SFAS No. 143, Accounting for Asset Retirement Obligations. This statement requires that the fair value of an asset retirement obligation be recognized in the period in which it is incurred. The associated asset retirement costs would be capitalized as part of the carrying amount of the long-lived asset. It would apply to legal obligations associated with the retirement of long-lived assets that result from the acquisition, construction, development and (or) the normal operation of a long-lived asset. This statement is effective for financial statements issued for fiscal years beginning after June 15, 2002. The Company has not yet determined the impact of this statement on the consolidated financial statements.

Long-Lived Assets - In August 2001, the FASB issued SFAS No. 144, Accounting for the Impairment or Disposal of Long-Lived Assets. This statement supersedes SFAS No. 121, Accounting for the Impairment of Long-Lived Assets and for Long-Lived Assets to Be Disposed Of. This statement establishes a single accounting model for long-lived assets to be disposed of by sale, whether previously held and used, or newly acquired. This statement is effective for financial statements issued for fiscal years beginning after December 15, 2001. The Company adopted this statement on January 1, 2002, with no impact on the consolidated financial statements.

Table of Contents**NOTE 2 MCN ENERGY ACQUISITION**

On May 31, 2001, the Company completed the acquisition of MCN Energy by acquiring all of its outstanding shares of common stock for a combination of cash and shares of the Company's common stock. See Note 8 Common Stock and Earnings per Share herein for additional information. The Company purchased the outstanding common stock of MCN Energy for \$2.3 billion and assumed existing MCN Energy debt and preferred securities of \$1.5 billion.

The Company accounted for the acquisition using the purchase method. The allocation of the purchase price included in the consolidated statement of financial position is preliminary and may be revised up to one year from the date of acquisition due to adjustments in the estimated fair value of the assets acquired and liabilities assumed, and refinements of management's plans to divest of certain assets acquired. The Company does not expect that additional revisions to the allocation of the purchase price in 2002 will be material. The excess purchase price over the fair value of net assets acquired totaled approximately \$2 billion and was classified as goodwill. The Company began amortizing goodwill on June 1, 2001, on a straight-line basis using a 40-year life. In accordance with the adoption of SFAS No. 142, Goodwill and Other Intangible Assets, on January 1, 2002, the amortization of goodwill ceased, and it will be tested for impairment on an annual basis.

The following unaudited pro forma summary presents information for the Company as if the acquisition became effective at the beginning of the respective periods. The pro forma amounts include the impact of certain adjustments, such as acquiring the operations of MCN Energy and issuing \$1.35 billion of debt and 29 million shares of common stock to finance the acquisition. The pro forma amounts do not reflect any benefits from synergies that the Company expects to achieve from combining operations, do not reflect the actual results that would have occurred had the companies been combined for the periods presented, and are not necessarily indicative of future results of operations of the combined companies.

NOTE 3 MERGER AND RESTRUCTURING CHARGES

Edgar Filing: DTE ENERGY CO - Form 8-K

On May 31, 2001, the Company completed the acquisition of MCN Energy. The Company incurred merger-related charges and restructuring charges associated with the acquisition. The merger-related charges of \$27 million (\$18 million after tax) in 2001 and \$25 million (\$16 million after tax) in 2000, consisted primarily of system integration, relocation, legal, accounting and consulting costs. Restructuring charges of \$241 million (\$157 million after tax) in 2001, were primarily associated with a work force reduction plan. The plan included early retirement incentives along with voluntary separation arrangements for 1,186 employees, primarily in overlapping corporate support functions. The merger and restructuring costs had the effect of decreasing earnings by \$268 million (\$175 million after tax) and \$25 million (\$16 million after tax) in 2001 and 2000, respectively. Approximately \$53 million of the merger and restructuring charges have been paid as of December 31, 2001, including approximately \$20 million of benefits, and it is anticipated that the remaining benefits of \$215 million have been or will be paid from retirement plans.

NOTE 4 REGULATORY MATTERS

Regulation

Detroit Edison and MichCon are subject to the regulatory jurisdiction of the MPSC, which issues orders pertaining to rates, recovery of certain costs, including the costs of generating facilities and regulatory assets, conditions of service, accounting and operating-related matters.

Detroit Edison's electric distribution operations, MichCon's gas distribution and transportation operations, and the transmission operations of ITC meet the criteria of SFAS No. 71, Accounting for the Effects of Certain Types of Regulation. This accounting standard recognizes the cost-based ratemaking process, which results in differences in the application of generally accepted accounting principles between regulated and non-regulated businesses. SFAS No. 71 requires the recording of regulatory

Table of Contents

assets and liabilities for certain transactions that would have been treated as revenue and expense in non-regulated businesses. Regulatory assets represent costs that will be recovered from customers through the ratemaking process. Regulatory liabilities represent benefits that will be refunded to customers through reduced rates. Continued applicability of SFAS No. 71 requires that rates be designed to recover specific costs of providing regulated services and be charged to and collected from customers. Management believes that currently available facts support the continued application of SFAS No. 71 to these businesses. Future regulatory changes or changes in the competitive environment could result in the Company discontinuing the application of SFAS No. 71 for some or all of its businesses and require the write-off of the portion of any regulatory asset or liability that was no longer probable of recovery through rates or refund.

Regulatory Assets and Liabilities

The Company recorded the following regulatory assets and liabilities at December 31:

Electric Industry Restructuring

MPSC orders issued in 1997 and 1998 altered the regulatory process in Michigan and provided a plan for transition to competition for the generation business of Detroit Edison. Therefore, effective December 31, 1998, Detroit Edison's generation business no longer met the criteria of SFAS No. 71. Also, at that time, the 1,150 megawatt (MW) Fermi 2 nuclear generating plant was determined to be impaired. Since a December 1998 MPSC order provided for full recovery of Fermi 2 through the regulated transmission and distribution businesses, a regulatory asset was established representing the net book value of Fermi 2 and related assets.

Michigan Legislation - In June 2000, Public Act 141 (PA 141) became effective. PA 141 provided Detroit Edison with the right to recover stranded costs, codified and established January 1, 2002 as the date for full implementation of the MPSC's existing Electric Choice program, and required the MPSC to reduce residential electric rates by 5%. At that time, Public Act 142 (PA 142) also became effective. PA 142 provided for the recovery through securitization of qualified costs which consist of an electric

Table of Contents

utility's regulatory assets, plus various costs associated with, or resulting from, the establishment of a competitive electric market and the issuance of securitization bonds.

Acting pursuant to PA 141, in an order issued in June 2000, the MPSC reduced Detroit Edison's residential electric rates by 5% and imposed a rate freeze for all classes of customers through 2003. In April 2001, commercial and industrial rates were lowered by 5% as a result of savings derived from the issuance of securitization bonds in March 2001, as subsequently discussed.

The legislation also contains provisions preventing rate increases for residential customers through 2005, for small business customers through 2004, and remaining business customers through 2003. Certain costs may be deferred after 2003 and during the period that rates are frozen. This rate cap may be lifted when certain market test provisions are met, specifically, an electric utility has no more than 30% of generation capacity in its relevant market, with consideration for capacity needed to meet a utility's responsibility to serve its customers. Statewide, multi-utility transmission system improvements also are required. Detroit Edison expects that these market and transmission improvement conditions will be met, and the rate cap will not continue after the dates specified in the legislation.

In several orders issued in June 2000, the MPSC determined that adjusting rates for changes in fuel and purchased power expenses through continuance of the power supply cost recovery (PSCR) clause would be inconsistent with the rate freeze. Detroit Edison was not permitted to collect the 1998 PSCR under-recovery of \$9 million, plus accrued interest of \$3 million. Also, Detroit Edison was not required to refund approximately \$55 million of liabilities for over-recoveries of PSCR expenses for 1999 and 2000, and disallowances under the Fermi 2 performance standard mechanism. In January 2002, the Michigan Court of Appeals rejected appeals filed by parties opposing the MPSC's actions in this proceeding.

In October 2000, the MPSC initiated a case to determine the methodology of calculating net stranded costs as required by PA 141. As a result of an MPSC order in December 2001, Detroit Edison would recover the net stranded costs associated with its electric generation operations. Specifically, there would be an annual filing with the MPSC comparing actual revenues from generation services to the revenue requirements, including an allowance for the cost of capital, to recover the costs of generation operations. The MPSC, in its orders, determined that Detroit Edison had no stranded costs using 2000 data, established a zero 2002 transition charge and deferred the issues of refining the net stranded costs methodology and the recalculating of net stranded costs to 2002. The MPSC also determined that Detroit Edison should provide a full and offsetting credit for the securitization and tax charges applied to Electric Choice bills in 2002. In addition, the MPSC ordered an additional credit on Electric Choice bills equivalent to the 5% rate reduction benefiting full service customers funded by savings derived from securitization. The provisions of this order will likely encourage additional customer participation in the Electric Choice program and result in the loss of margins from providing generation services. Detroit Edison has asked for rehearing and clarification on certain aspects of the order and has requested that the MPSC initiate an expedited proceeding to implement those clarifications and interpretations.

In June 2001, pursuant to PA 141, Detroit Edison filed with the MPSC an application outlining a proposal to unbundle its existing rates. Detroit Edison's initial proposal did not unbundle all tariffs but instead included a bill message stating the amount of distribution charges a customer would incur under Electric Choice. A December 2001 MPSC order found that the June 2001 filing did not meet the requirements of PA 141 and ordered Detroit Edison to make a new filing. In February 2002, Detroit Edison made a filing that unbundled existing rates using updated cost data. Detroit Edison is unable to determine the timing or outcome of this proceeding.

In another December 2001 order, the MPSC finalized the prices, terms and conditions contained in the Retail Access Service Tariff (RAST) that will likely encourage additional customer participation in the Electric Choice program. The implementation of the order will result in increased expenses associated

Table of Contents

with implementing Electric Choice, including meter installation, meter reading and computer system enhancements. Detroit Edison has asked for rehearing and clarification on certain aspects of the order.

Securitization In an order issued in November 2000 and clarified in January 2001, the MPSC approved the issuance of securitization bonds to recover qualified costs that include the unamortized investment in Fermi 2, costs of certain other regulatory assets, Electric Choice implementation costs, costs of issuing securitization bonds, and the costs of retiring securities with the proceeds of securitization.

Detroit Edison formed The Detroit Edison Securitization Funding LLC (Securitization LLC), a wholly owned subsidiary, for the purpose of securitizing its qualified costs. In March 2001, the Securitization LLC issued \$1.75 billion of Securitization Bonds, and Detroit Edison sold \$1.75 billion of qualified costs to the Securitization LLC. The Securitization Bonds mature over a period of up to 15 years and have an average interest rate of 6.1%. Detroit Edison used the proceeds to retire debt and equity in approximately equal amounts. The Company likewise retired approximately 50% debt and 50% equity with the proceeds received as the sole shareholder of Detroit Edison. Detroit Edison implemented a non-bypassable surcharge on its customer bills, effective March 26, 2001, for the purpose of collecting amounts sufficient to provide for the payment of interest and principal and the payment of income tax on the additional revenue from the surcharge. As a result of securitization, Detroit Edison established a regulatory asset for securitized costs including costs that had previously been recorded in other regulatory asset accounts.

The Securitization LLC is independent of Detroit Edison, as is its ownership of the securitization property. Due to principles of consolidation, qualified costs sold by Detroit Edison to the Securitization LLC and the \$1.75 billion of securitization bonds appear on the Company's consolidated statement of financial position. The Company makes no claim to these assets. Ownership of such assets has vested in the Securitization LLC and been assigned to the trustee for the Securitization Bonds. Funds collected by Detroit Edison, acting in the capacity of a servicer for the Securitization LLC, are remitted to the trustee for the Securitization Bonds. Neither the securitization property nor funds collected from Detroit Edison's customers for the payment of costs related to the Securitization LLC and Securitization Bonds are available to Detroit Edison's creditors.

Transmission Business - Effective January 2001, the transmission assets owned by Detroit Edison were transferred to a wholly owned subsidiary, ITC. In May 2001, Detroit Edison distributed 100% of the shares of ITC to the Company. Detroit Edison continues to bill and collect transmission revenues as currently authorized in its bundled rates approved by the MPSC. ITC provides transmission services to customers of Detroit Edison and other non-affiliated customers. In August 2001, ITC filed with the FERC to join the Midwest Independent System Operator (MISO) and withdrew from the Alliance Regional Transmission Organization. In September 2001, ITC filed to suspend the effective date of its transmission rates approved by the FERC in 2000, due to the filing of a rate structure by the MISO.

Gas Industry Restructuring

Regulatory Reform Plan Through December 2001, MichCon was operating under an MPSC-approved Regulatory Reform Plan which included a comprehensive experimental three-year Gas Choice Program, a Gas Sales Program and an income sharing mechanism. The Gas Choice Program allowed a limited number of customers to purchase gas from suppliers other than MichCon. The Gas Sales Program suspended the GCR mechanism for customers who continue to purchase gas from MichCon, and fixed the gas commodity component of MichCon's sales rates at \$2.95 per Mcf. The income sharing mechanism allowed customers to share in profits when actual returns on equity from utility operations exceed predetermined thresholds. Based on the MPSC approved formula, the Company believes that no income sharing is required in 2001.

Table of Contents

Regulatory Changes - MichCon returned to the GCR mechanism in January 2002 when the Gas Sales Program expired. Under the GCR mechanism, the gas commodity component of MichCon's gas sales rates will be based on market prices and set through the GCR process. In December 2001, the MPSC issued an order that permitted MichCon to implement GCR factors of up to \$3.62 per Mcf for January 2002 billings and up to \$4.38 per Mcf for the remainder of 2002. The order also allowed MichCon to recognize a regulatory asset of approximately \$14 million representing the difference between the \$4.38 factor and the \$3.62 factor for volumes that were unbilled at December 31, 2001. The regulatory asset will be subject to the 2002 GCR reconciliation process.

In December 2001, the MPSC also approved MichCon's application for a voluntary, expanded permanent Gas Choice Program which would replace the experimental program that expires in March 2002. Effective April 2002, up to approximately 40% of MichCon's customers could elect to purchase gas from suppliers other than MichCon. Effective April 2003, up to approximately 60% of customers would be eligible and by April 2004, all of MichCon's 1.2 million customers can participate in the program. The MPSC also approved the use of deferred accounting for the recovery of implementation costs of the Gas Choice Program.

Other

In accordance with a November 1997 MPSC order, Detroit Edison reduced rates by \$53 million annually to reflect the scheduled reduction in the revenue requirement for Fermi 2. The \$53 million reduction was effective in January 1999. In addition, the November 1997 MPSC order authorized the deferral of \$30 million of storm damage costs and amortization and recovery of the costs over a 24-month period commencing January 1998. After various legal appeals, the Michigan Court of Appeals remanded back to the MPSC for hearing the November 1997 order. In December 2000, the MPSC issued an order reopening the case for hearing. The parties in the case have agreed to a stipulation of fact and waiver of hearing. In February 2002, an MPSC administrative law judge issued a proposal for decision that supports Detroit Edison's actions in this matter. A final order is expected in 2002.

The Company is unable to predict the outcome of the regulatory matters discussed herein. Resolution of these matters is dependent upon future MPSC orders, which may impact the financial position and results of operations of the Company.

NOTE 5 FERMI 2

General

Fermi 2, a nuclear generating unit, began commercial operation in January 1988. The Nuclear Regulatory Commission (NRC) maintains jurisdiction over the licensing and operation of Fermi 2. Fermi 2 has a design electrical rating (net) of 1,150 MW. This unit represents approximately 10% of Detroit Edison's summer net rated capability. The net book balance of the Fermi 2 plant was written off at December 31, 1998, and an equivalent regulatory asset was established. In 2001, the Fermi 2 regulatory asset was securitized. See Note 4 - Regulatory Matters.

Ownership of an operating nuclear generating unit subjects Detroit Edison to significant additional risks. Fermi 2 is regulated by a number of different governmental agencies concerned with public health, safety and environmental protection.

Table of Contents

Insurance

Detroit Edison insures Fermi 2 with property damage insurance provided by Nuclear Electric Insurance Limited (NEIL). The NEIL insurance policies provide \$500 million of primary coverage (with a \$1 million deductible) and \$2.25 billion of excess coverage for stabilization, decontamination and debris removal costs, repair and/or replacement of property and decommissioning. The combined limits provide total property damage insurance of \$2.75 billion.

Detroit Edison maintains an insurance policy with NEIL providing for extra expenses, including certain replacement power costs necessitated by Fermi 2's unavailability due to an insured event. These policies have a 12-week waiting period and provide for three years of coverage.

Terrorism coverage under the NEIL policies has been modified for multiple terrorism losses occurring within one year after the first loss from terrorism. NEIL would make available to all insured entities up to \$3.2 billion and any amounts it recovers from reinsurance, government indemnity or other sources for such losses.

Under the NEIL policies, Detroit Edison could be liable for maximum assessments of up to approximately \$27 million per event if the loss associated with any one event should exceed the accumulated funds available to NEIL.

As required by federal law, Detroit Edison maintains \$200 million of public liability insurance for a nuclear incident. For liabilities arising out of terrorist acts, the policy is now subject to one industry aggregate limit of \$200 million. Further, under the Price-Anderson Amendments Act of 1988 (Act), deferred premium charges up to \$84 million could be levied against each licensed nuclear facility, but not more than \$10 million per year per facility. Thus, deferred premium charges could be levied against all owners of licensed nuclear facilities in the event of a nuclear incident at any of these facilities. The Act will expire on August 1, 2002. It is unknown whether this statute will be renewed or modified.

Decommissioning

The NRC has jurisdiction over the decommissioning of nuclear power plants and requires decommissioning funding based upon a formula. The MPSC and FERC regulate the recovery of costs of decommissioning nuclear power plants and both require the use of external trust funds to finance the decommissioning of Fermi 2. Rates approved by the MPSC provide for the decommissioning costs of Fermi 2. Detroit Edison is continuing to fund FERC jurisdictional amounts for decommissioning even though explicit provisions are not included in FERC rates. The Company believes that the MPSC and FERC collections will be adequate to fund the estimated cost of decommissioning using the NRC formula.

Detroit Edison has established external trust funds to hold decommissioning and low-level radioactive waste disposal funds collected from customers. During 2001, 2000 and 1999, Detroit Edison collected \$38 million in each year from customers for decommissioning and low-level radioactive waste disposal. Such amounts were recorded as components of depreciation, depletion and amortization expense, and in other liabilities. Net unrealized losses of \$23 million and \$18 million in 2001 and 2000, respectively, were recorded as adjustments to the nuclear decommissioning trust funds and other liabilities. At December 31, 2001, investments in the external trust funds consisted of approximately 50.7% in publicly traded equity securities, 46.1% in fixed debt instruments and 3.2% in cash equivalents. Investments in debt and equity securities held within the external trust funds are classified as available for sale.

Table of Contents

At December 31, 2001 and 2000, Detroit Edison had reserves of \$373 million and \$351 million for the future decommissioning of Fermi 2, and \$29 million and \$32 million for the decommissioning of Fermi 1, a nuclear unit that has been shut down since 1972, respectively. Detroit Edison also had a reserve of \$15 million for low-level radioactive waste disposal costs at December 31, 2001 and 2000. These reserves are included in other liabilities, with an equivalent amount deposited in external trust funds. It is estimated that the cost of decommissioning Fermi 2, when its license expires in 2025, will be \$913 million in 2001 dollars and \$3.5 billion in 2025 dollars, using a 6% inflation rate. In 2001, the Company began the decommissioning of Fermi 1, with the goal of removing the radioactive material and terminating the Fermi 1 license. The decommissioning is expected to be completed by 2007.

Nuclear Fuel Disposal Costs

In accordance with the Federal Nuclear Waste Policy Act of 1982, Detroit Edison has a contract with the U.S. Department of Energy (DOE) for the future storage and disposal of spent nuclear fuel from Fermi 2. Detroit Edison is obligated to pay the DOE a fee of one mill per net kilowatt-hour of Fermi 2 electricity generated and sold. The fee is a component of nuclear fuel expense. Delays have occurred in the DOE's program for the acceptance and disposal of spent nuclear fuel at a permanent repository. Until the DOE is able to fulfill its obligation under the contract, Detroit Edison is responsible for the spent nuclear fuel storage. Detroit Edison estimates that existing storage capacity will be sufficient until 2007.

NOTE 6 JOINTLY OWNED UTILITY PLANT

Detroit Edison's portion of jointly owned utility plant at December 31, 2001 is as follows:

	<u>Belle River</u>	<u>Ludington Pumped Storage</u>

* Detroit Edison's ownership interest is 62.78% in Unit No. 1, 81.39% of the portion of the facilities applicable to Belle River used jointly by the Belle River and St. Clair Power Plants, 49.59% in certain transmission lines and, at December 31, 2001, 75% in facilities used in common with Unit No. 2.

Belle River

The Michigan Public Power Agency (MPPA) has an ownership interest in Belle River Unit No. 1 and certain other related facilities. MPPA is entitled to 18.61% of the capacity and energy of the entire plant (1,026 MW) and is responsible for the same percentage of the plant's operation and maintenance expenses and capital improvements.

Ludington Pumped Storage

Operation, maintenance and other expenses of the Ludington Pumped Storage Plant (1,872 MW) are shared by Detroit Edison and Consumers Energy Company in proportion to their respective ownership interests in the plant.

Table of Contents

NOTE 7 INCOME TAXES

DTE Energy files a consolidated federal income tax return.

Total income tax expense as a percent of income before tax varied from the statutory federal income tax rate for the following reasons:

	<u>2001</u>	<u>2000</u>	<u>1999</u>
Statutory income tax rate	35.0%	35.0%	35.0%
Alternate fuels credit (75.3) (27.1) (21.3)			
Removal costs 0.2 (5.0) (2.3)			
Investment tax credit (3.6) (2.2) (1.9)			
Depreciation (5.7) 2.3 1.5			
Goodwill amortization 4.7			
Research expenditures tax credit (3.0)			
ESOP (1.9)			
Other-net (0.7) (1.1) 0.1			

Effective income tax rate
(50.3)% 1.9% 11.1%

Components of income tax expense (benefit) were as follows:

	<u>2001</u>	<u>2000</u>	<u>1999</u>
(in Millions)			
Current federal and other income tax expense	\$176	\$268	\$260
Deferred federal income tax benefit (113) (118) (73)			
Alternate fuels credit			

(165) (130) (116)
Investment tax credit
(8) (11) (11)

Total
\$(110) \$9 \$60

Internal Revenue Code Section 29 provides a tax credit (alternate fuels credit) for qualified fuels produced and sold by a taxpayer to an unrelated party during the taxable year. Alternate fuels credits earned but not utilized of \$274 million are carried forward indefinitely as alternative minimum tax credits.

At December 31, 2001, the Company had a net operating loss carryforward of \$424 million expiring in 2019 and 2020. The Company does not believe that a valuation allowance is required, as it expects to utilize these losses prior to their expiration.

Table of Contents

Deferred tax assets and liabilities are recognized for the estimated future tax effect of temporary differences between the tax basis of assets or liabilities and the reported amounts in the financial statements. Deferred tax assets and liabilities are classified as current or noncurrent according to the classification of the related assets or liabilities. Deferred tax assets and liabilities not related to assets or liabilities are classified according to the expected reversal date of the temporary differences.

Deferred income tax assets (liabilities) were comprised of the following at December 31:

(in Millions)	2001	2000

The federal income tax returns of the Company are settled through 1992.

NOTE 8 COMMON STOCK AND EARNINGS PER SHARE

Common Stock

On May 31, 2001, the Company issued approximately 29 million shares of common stock, valued at \$1.06 billion, as part of the consideration to purchase all of the outstanding shares of MCN Energy common stock. See Note 2 MCN Energy Acquisition. The newly issued shares were valued at the average market price of the Company's common stock for a period of five days, including February 28, 2001, which was the date the Company and MCN Energy announced the revised merger agreement.

During 2001, the Company repurchased approximately 10.5 million shares of common stock at an aggregate cost of approximately \$438 million. In 2000, the Company repurchased approximately 2.3 million shares of common stock at an aggregate cost of approximately \$70 million.

The Company records unearned compensation as a reduction in common stock. The unearned compensation represents the value of non-vested stock awards granted under the DTE Energy Company 2001 Stock Incentive Plan and the Long-Term Incentive Plan adopted in 1995. The number of non-vested stock awards is included in the number of common shares outstanding; however, for purposes of computing basic earnings per share, non-vested stock awards are excluded.

Table of Contents

Shareholders Rights Plan

The Company has a Shareholders Rights Plan that is designed to maximize shareholders value in the event the Company is acquired. The rights are attached to and trade with shares of the Company's common stock until they are exercisable upon certain triggering events. The rights will expire in 2007.

Earnings per Share

The Company reports both basic and diluted earnings per share. Basic earnings per share is computed by dividing income available to common stockholders by the weighted average number of common shares outstanding during the period. Diluted earnings per share assumes the issuance of potentially dilutive common shares outstanding during the period and the repurchase of common shares that would have occurred with proceeds from the assumed issuance. These include the assumed exercise of stock options, vesting of non-vested stock awards, and issuance of performance share awards. A reconciliation of both calculations is presented in the table below.

Options to purchase approximately 2.34 million shares of common stock at an average price of \$43.86 per share were outstanding during 2001. These securities were not included in the computation of diluted EPS because the options' exercise price was greater than the average market price of the common shares, thus making these securities anti-dilutive.

NOTE 9 PREFERRED SECURITIES

DTE Energy and Enterprises-Obligated Mandatorily Redeemable Preferred Securities of Subsidiaries

DTE Energy has established a trust, and Enterprises has established various trusts and a partnership, each formed for the sole purpose of issuing preferred securities and lending the gross proceeds thereof to their respective parent. The sole assets of the trusts and partnership are debentures of the parent with terms similar to those of the related preferred securities. Summarized information for obligated mandatorily redeemable preferred securities of subsidiaries holding solely debentures of the parent is as follows:

December 31, 2001	Liquidation Value Per Share	Maturity of Underlying Security	Earliest Redemption Date

\$274

Edgar Filing: DTE ENERGY CO - Form 8-K

The preferred securities carry similar provisions relating to their respective parent as described below.

The preferred securities allow the parent the right to extend interest payment periods on the debentures and, as a consequence, dividend payments on the preferred securities can be deferred by the trusts and partnership during any such interest payment period. In the event that the parent exercises this right, the parent may not declare dividends on its common stock.

In the event of default, holders of the preferred securities will be entitled to exercise and enforce the trusts' and partnership's creditor rights against the parent, which may include acceleration of the principal amount due on the debentures. The Company and Enterprises have issued guaranties with respect to payments on the preferred securities. These guaranties, when taken together with the parent's obligations under the debentures, the related indenture, and the trusts and partnership documents, provide full and unconditional guaranties of the trusts' and partnership's obligations under the preferred securities.

Table of Contents

Financing costs for these issuances were deferred and are reflected as a reduction in the carrying value of the preferred securities. These costs are being amortized using the straight-line method over the estimated lives of the related securities.

In January 2002, DTE Energy Trust I, a wholly owned trust of the Company, issued \$180 million of 7.8% Trust Preferred Securities with a liquidation value of \$25 per share. The maturity date of the underlying security is February 2032. The earliest date the securities can be redeemed is February 2007. The proceeds were used to redeem the 8-5/8% Trust Originated Preferred Securities and the 9-3/8% Redeemable Cumulative Preferred Securities in February 2002.

Preferred and Preference Securities Authorized and Unissued

At December 31, 2001, the Company had 5 million shares of preferred stock without par value authorized, with no shares issued. Of such amount, 1.6 million shares were reserved for issuance in accordance with the Shareholders Rights Plan.

At December 31, 2001, Detroit Edison had 6.75 million shares of preferred stock with a par value of \$100 per share and 30 million shares of preference stock with a par value of \$1 per share authorized, with no shares issued.

At December 31, 2001, Enterprises had 25 million shares of preferred stock without par value authorized, with no shares issued.

At December 31, 2001, MichCon had 7 million shares of preferred stock with a par value of \$1 per share and 4 million shares of preference stock with a par value of \$1 per share authorized, with no shares issued.

In the years 2002 – 2006, the Company's long-term debt maturities are \$502 million, \$379 million, \$466 million, \$448 million and \$683 million, respectively.

Edgar Filing: DTE ENERGY CO - Form 8-K

Substantially all of the net utility properties of Detroit Edison and MichCon, totaling approximately \$8.3 billion, are pledged as security for the payment of outstanding mortgage bonds and other secured debt.

Each series of QUIDS provides that interest will be paid quarterly. However, Detroit Edison has the right to extend the interest payment period on the QUIDS for up to 20 consecutive interest payment periods.

Table of Contents

Interest would continue to accrue during the deferral period. If this right is exercised, Detroit Edison may not declare or pay dividends on, or redeem, purchase or acquire, any of its capital stock during the deferral period.

At December 31, 2001, \$856 million of notes were subject to periodic remarketings. Remarketing agents remarket these securities at the lowest interest rate necessary to produce a par bid. In the event that a remarketing fails, Standby Note Purchase Agreements and/or Letters of Credit are in place for a portion of the notes that provide that banks will purchase the securities and, after the conclusion of all necessary proceedings, remarket the bonds. In the event the banks' obligations under the Standby Note Purchase Agreements and/or Letters of Credit are not honored, then the Company would be required to purchase any securities subject to a failed remarketing.

The Company financed the cash consideration of the acquisition of MCN Energy through the issuance of \$1.35 billion of debt in May 2001. The Company issued three series of senior notes with differing maturities ranging from three to 10 years in the following denominations: (i) \$250 million of 6.00% senior notes due 2004; (ii) \$500 million of 6.45% senior notes due 2006; and (iii) \$600 million of 7.05% senior notes due 2011. Interest is payable on a semi-annual basis beginning December 1, 2001.

Detroit Edison formed the Securitization LLC, a wholly owned subsidiary, for the purpose of securitizing its stranded costs. In March 2001, the Securitization LLC issued \$1.75 billion of Securitization Bonds, Series 2001-1, and Detroit Edison sold \$1.75 billion of qualified costs to the Securitization LLC. During the year ended December 31, 2001, Detroit Edison used proceeds from securitization along with other refinancings to redeem \$1.3 billion in debt, of which \$1.1 billion represented unscheduled redemptions.

During 2001, Detroit Edison issued \$200 million of 5.05% senior secured notes due 2005, and \$500 million of 6.125% senior secured notes due 2010. Interest is payable on a semi-annual basis beginning April 1, 2002. Detroit Edison also issued \$139.9 million of 5.45% tax-exempt bonds due 2029. Interest is payable on a semi-annual basis beginning March 1, 2002.

During 2001, Detroit Edison entered into a financing arrangement for certain equipment with a value of approximately \$90 million. The arrangement has an implicit interest rate of 7.6% with a term of approximately nine years.

During 2001, MichCon issued \$200 million of 6.125% senior secured notes due 2008. Interest is payable on a semi-annual basis beginning March 1, 2002. During 2001, MichCon paid the entire outstanding balance of a \$40 million mortgage bond that was due in 2021.

NOTE 11 SHORT-TERM CREDIT ARRANGEMENTS AND BORROWINGS

During 2001, the Company, Detroit Edison and MichCon entered into a bank facility arrangement used to support commercial paper in the amounts of \$800 million, \$300 million and \$300 million, respectively. Commercial paper is usually issued in lieu of an equivalent amount of borrowings under these lines of credit. Amounts outstanding under this facility at December 31, 2001, were \$423 million at the Company and \$254 million at MichCon. At December 31, 2000, \$45 million of commercial paper was outstanding at Detroit Edison under a prior facility. The weighted average interest rates for short-term borrowings at December 31, 2001 and 2000 were 2.8% and 6.6%, respectively.

At December 31, 2001, the Company had letters of credit from a bank that allowed the Company to use approximately \$88 million of cash previously classified as restricted on the Company's statement of financial position. There were no outstanding draws on these letters of credit at December 31, 2001.

Table of Contents

Detroit Edison also has a \$200 million short-term financing agreement secured by its customer accounts receivable and unbilled revenues portfolio under which there were no outstanding amounts at December 31, 2001. There was \$200 million outstanding at December 31, 2000, with a weighted average interest rate of 6.8%.

During 2001, DTE Capital was merged into the Company. At December 31, 2000, DTE Capital had \$258 million of commercial paper outstanding, with a weighted average interest rate of 7.7%.

NOTE 12 CAPITAL AND OPERATING LEASES

Lessee The Company, Detroit Edison, Enterprises and MichCon lease various assets under capital and operating leases including lake vessels, locomotives and coal cars, office buildings, a parking structure, a warehouse, computers, vehicles and other equipment. The lease arrangements expire at various dates through 2016, with renewal options extending beyond that date. Portions of the office buildings and parking structure are subleased to various tenants.

In July 2001, Detroit Edison terminated its nuclear fuel financing arrangement and purchased the leased nuclear fuel for \$79 million.

Future minimum lease payments under non-cancelable leases at December 31, 2001 were:

NOTE 13 FINANCIAL AND OTHER DERIVATIVE INSTRUMENTS

In June 1998, the FASB issued SFAS No. 133, Accounting for Derivative Instruments and Hedging Activities. SFAS No. 133, as amended, establishes accounting and reporting standards for derivative instruments and for hedging activities. It requires that all derivative instruments be recognized as either assets or liabilities, measured at fair value. The accounting for changes in fair value depends upon the purpose of the derivative instrument and whether it is designated as a hedge and qualifies for hedge accounting. To the extent derivative instruments qualify as hedges and are designated as hedges of the variability of cash flows associated with forecasted transactions, the effective portion of the gain or loss on such derivative instruments is reported in other comprehensive income. The ineffective portion, if any, is reported in net income. Such amounts reported in other comprehensive income are reclassified into net income when the forecasted transaction affects earnings. If a cash flow hedge is discontinued because it is probable that the forecasted transaction will not occur, the net gain or loss is immediately reclassified into earnings. To the extent derivative instruments qualify as hedges and are designated as hedges of changes in fair value of an existing asset, liability or firm commitment, the gain or loss on the hedging instrument is recognized in earnings along with the changes in fair value of the hedged asset, liability or firm commitment attributable to the hedged risk.

Edgar Filing: DTE ENERGY CO - Form 8-K

SFAS No. 133 requires that as of the date of initial adoption, the difference between the fair value of derivative instruments and the previous carrying amount of those derivatives be reported in net income or other comprehensive income, as appropriate, as the cumulative effect of a change in accounting principle in accordance with Accounting Principles Board (APB) Opinion 20, Accounting Changes.

As of January 1, 2001, the Company adopted SFAS No. 133, as required. The financial statement impact of recording the various SFAS No. 133 transactions at January 1, 2001 was as follows:

Table of Contents

Financial Statement Line Item	Increase (Decrease)
(in Millions)	
Assets from risk management and trading activities	\$ 26
Liabilities from risk management and trading activities	
\$85	
Deferred income taxes payable	
\$(20)	
Cumulative effect of a change in accounting principle:	
Other comprehensive loss	
\$42	
Net income	
\$3	

The Company's primary market risk exposures are associated with interest rates and commodity prices. The Company has risk management policies to monitor and assist in mitigating these market risks and uses derivative instruments to manage some of the exposures. Except for the activities of the Wholesale Marketing & Trading segment, the Company does not hold or issue derivative instruments for trading purposes. All derivatives are recorded at fair value and shown as assets or liabilities from risk management and trading activities in the consolidated statement of financial position.

The FASB continues to develop interpretive guidance for SFAS No. 133. Accordingly, any future interpretations of SFAS No. 133 may impact the Company's ultimate application of the standard.

RISK MANAGEMENT ACTIVITIES**Credit Risk**

The Company is exposed to credit risk in the event of nonperformance by customers or counterparties of its contractual obligations. The company maintains credit policies with regard to its customers and counterparties that management believes significantly minimize overall credit risk. These policies include an evaluation of potential customers' and counterparties' financial condition and credit rating, collateral requirements or other credit enhancements such as letters of credit or guarantees, and the use of standardized agreements which allow for the netting or offsetting of positive and negative exposures associated with a single counterparty.

Interest Rate Risk

During 2000, the Company entered into a series of forward-starting interest rate swaps and treasury locks in order to limit its sensitivity to market interest rate risk associated with its issuance of long-term debt used to finance the acquisition of MCN Energy. Such instruments were formally designated as cash flow hedges. In the first quarter of 2001, a loss of approximately \$5 million was reclassified from accumulated other comprehensive loss into earnings, since management determined it was probable that certain transactions associated with the issuance of long-term debt would not occur within the time frame originally anticipated. This loss was reported as a component of interest expense within the consolidated statement of operations. In May 2001, the Company issued long-term debt, and terminated these hedges at a cost of \$83 million, with the corresponding loss on these instruments included in other comprehensive loss. During the next 30 years, amounts recorded in other comprehensive loss will be reclassified to interest expense as the related interest affects earnings. At December 31, 2001, the estimated amount

of existing losses that is expected to be reclassified into earnings within the next 12 months is approximately \$ 10 million.

Table of Contents

Commodity Price Risk

Electric Utility

Detroit Edison uses forward energy, capacity, and futures contracts to manage the risk of fluctuations in the market price of electricity and natural gas. Certain of these contracts have been formally designated as cash flow hedges of the forecasted purchase of power and natural gas. For the year ended December 31, 2001, Detroit Edison recorded a loss of \$23 million, net of tax, in other comprehensive loss for these hedges. Amounts recorded in other comprehensive loss will be reclassified to fuel, purchased power and gas expense as the forecasted purchases of electricity and natural gas affect earnings. At December 31, 2001, the estimated net amount of existing loss expected to be reclassified into earnings within the next 12 months is approximately \$21 million. The maximum length of time over which Detroit Edison is hedging its exposure to the variability of future cash flows is two years. Ineffectiveness recognized in these hedging relationships was immaterial for the year ended December 31, 2001.

Certain of Detroit Edison's forward electric contracts are considered normal purchases and sales and therefore are excluded from the scope of SFAS No. 133.

In June 2001, the FASB provided guidance on the implementation of SFAS No. 133 regarding certain contracts in the power generation industry. In June 2001, issue No. C15, *Scope Exceptions: Normal Purchases and Normal Sales Exception for Option-Type Contracts and Forward Contracts in Electricity*, was issued. The FASB concluded that because electricity cannot be readily stored in significant quantities, and the entity engaged in selling electricity is obligated to maintain sufficient capacity to meet the electricity needs of its customer base, an option-like contract for the purchase of electricity that meets certain criteria is eligible for the normal purchases and sales exception. Detroit Edison adopted this new guidance on July 1, 2001, as required, classified certain contracts as normal, and began amortizing the previously recorded liability on option-like contracts over their remaining lives. In December 2001, the FASB issued revisions to issue No. C15 that are effective in April 2002. The revised guidance differentiates characteristics of traditional capacity contracts used by electric utilities to meet electric load and financial options on electricity. Traditional capacity contracts are eligible for settlement accounting under the normal purchases and sales exception. Financial options on electricity will not be eligible for settlement accounting. Financial options on electricity will be recorded at fair value on the statement of financial position using mark-to-market accounting.

Gas Utility

MichCon has firm-priced contracts for a substantial portion of its expected gas supply requirements through 2002. These contracts are designated and qualify for the normal purchases exception under SFAS No.133. Accordingly, MichCon does not account for such contracts as derivatives.

Non-regulated Operations

Natural gas forwards, futures, options and swap agreements are used to manage exposure to the risk of market price and volume fluctuations on gas sale and purchase contracts, gas production and gas inventories. Enterprises has determined that this risk minimization strategy will be accounted for by marking to market its commodity forwards, financial derivatives, and corresponding physical positions so there are substantial offsetting amounts. This fair value accounting better aligns financial reporting with the way such business is managed and its performance measured. Additionally, certain transportation contracts are considered derivatives and marked to market under SFAS No. 133. Unrealized gains and losses resulting from marking to market commodity-related derivatives are recorded as an adjustment to revenues.

Table of Contents

Although it attempts to maintain a balanced or flat book from an economic standpoint, Enterprises experiences earnings volatility as a result of its owned gas reserves, as well as from open positions related to its long-term transportation and storage assets. Gas produced from owned reserves does not meet the definition of a derivative under SFAS No. 133.

TRADING ACTIVITIES

Wholesale Marketing & Trading markets and trades electricity and natural gas physical products and financial instruments, and provides risk management services utilizing energy commodity derivative instruments, which include futures, exchange-traded and over-the-counter options, and forward purchase and sales contracts. Contracts used in trading activities are accounted for under Emerging Issues Task Force Issue No. 98-10, Accounting for Energy Trading Activities and Risk Management Activities. Accordingly, such contracts are marked to market with unrealized gains and losses recorded in revenues. All derivatives are recorded at fair value and are shown as assets or liabilities from risk management and trading activities in the consolidated statement of financial position. Contracts for physical delivery are recorded gross in revenues or expenses, as appropriate. Gains or losses on financial contracts are recorded net in the consolidated statement of operations.

FAIR VALUE OF OTHER FINANCIAL INSTRUMENTS

The fair value of financial instruments is determined by reference to various market data and other valuation techniques as appropriate. The carrying amount of financial instruments, except for long-term debt and preferred securities, approximate fair value. The estimated fair value of total long-term debt at December 31, 2001 and 2000 was \$ 8.2 billion and \$4.2 billion, respectively, compared to the carrying amount of \$ 8.1 billion and \$4.1 billion, respectively. The estimated fair value of preferred securities at December 31, 2001 was \$276 million compared to the carrying amount of \$274 million.

NOTE 14 COMMITMENTS AND CONTINGENCIES

Personal Property Taxes

Detroit Edison, MichCon and other Michigan utilities have asserted that Michigan's valuation tables result in the substantial overvaluation of utility personal property. Valuation tables established by the Michigan State Tax Commission (STC) are used to estimate the reduction in value of personal property based on the property's age. In November 1999, the STC approved new valuation tables that more accurately recognize the value of a utility's personal property. The new tables became effective in 2000 and are being used for current year assessments in most jurisdictions. However, several local taxing jurisdictions have taken legal action attempting to prevent the STC from implementing the new valuation tables and have continued to prepare assessments based on the superseded tables. The legal actions regarding the appropriateness of the new tables are currently before the Michigan Tax Tribunal (MTT) which issued an order in June 2000 stating that the tables are presumed to be correct, thus assigning the burden of proving otherwise to the taxing jurisdictions. The hearing before the MTT concluded in June 2001, with the STC subsequently filing a motion for summary judgment. All briefs related to that motion have been filed, and the parties now await the MTT decision.

Detroit Edison and MichCon accrue property tax expense based on the new tables. Detroit Edison and MichCon will seek to apply the new tables retroactively and to ultimately settle the pending tax appeals related to 1997 through 1999. This is a solution supported by the STC in the past. The legal action, along

Table of Contents

with possible additional appeals by local taxing jurisdictions, is expected to delay any recoveries realized by Detroit Edison and MichCon related to the new valuation tables.

Gas Environmental Matters

Former manufactured gas plant sites Prior to the construction of major natural gas pipelines, gas for heating and other uses was manufactured from processes involving coal, coke or oil. Enterprises owns, or previously owned, 17 such former manufactured gas plant (MGP) sites.

During the mid-1980 s, Enterprises conducted preliminary environmental investigations at former MGP sites, and some contamination related to the by-products of gas manufacturing was discovered at each site. The existence of these sites and the results of the environmental investigations have been reported to the Michigan Department of Environmental Quality (MDEQ). None of these former MGP sites is on the National Priorities List prepared by the U.S. Environmental Protection Agency (EPA).

Enterprises is involved in an administrative proceeding before the EPA regarding one of the former MGP sites. Enterprises has executed an order with the EPA, pursuant to which Enterprises is legally obligated to investigate and remediate the MGP site. Enterprises is remediating eight of the former MGP sites and conducting more extensive investigations at three other former MGP sites. In 1998, Enterprises received state closure of one of the former MGP sites. Additionally, the MDEQ has determined with respect to two other former MGP sites that Enterprises is not a responsible party for the purpose of assessing remediation expenditures. In September 2001, Enterprises was advised of one additional MGP site for which it has some responsibility. After review of the extent of the necessary environmental clean-up required, remediation costs for this site are not expected to exceed \$500,000.

In 1984, Enterprises established a \$12 million reserve for environmental investigation and remediation. During 1993, MichCon received MPSC approval of a cost deferral and rate recovery mechanism for investigation and remediation costs incurred at former MGP sites in excess of this reserve.

Enterprises employed outside consultants to evaluate remediation alternatives for these sites, to assist in estimating its potential liabilities and to review its archived insurance policies. The findings of these investigations indicate that the estimated total expenditures for investigation and remediation activities for these sites could range from \$30 million to \$170 million based on undiscounted 1995 costs. As a result of these studies, Enterprises accrued an additional liability and a corresponding regulatory asset of \$35 million during 1995.

During 2001, Enterprises spent \$4 million investigating and remediating these former MGP sites. At December 31, 2001, the reserve balance was \$25 million of which \$5 million was classified as current. Any significant change in assumptions, such as remediation techniques, nature and extent of contamination and regulatory requirements, could impact the estimate of remedial action costs for the sites and, therefore, have an effect on the Company s financial position and cash flows. However, management believes that the cost deferral and rate recovery mechanism approved by the MPSC will prevent environmental costs from having a material adverse impact on the Company s results of operations.

Commitments

Detroit Edison has an Energy Purchase Agreement for the purchase of steam and electricity from the Detroit Resource Recovery Facility. Under the Agreement, Detroit Edison will purchase steam through 2008 and electricity through June 2024. In 1996, a special charge to income was recorded that included a reserve for steam purchase commitments in excess of replacement costs from 1997 through 2008. The

Table of Contents

reserve for steam purchase commitments is being amortized to fuel, purchased power and gas expense with non-cash accretion expense being recorded through 2008. During 2001, the reserve for future steam purchase commitments was reduced by \$22 million due to changes in estimated future replacement costs. Purchases of steam and electricity were approximately \$41 million, \$35 million and \$35 million for 2001, 2000 and 1999, respectively. Annual steam and electric purchase commitments are approximately \$40 million, \$41 million, \$42 million, \$44 million and \$45 million for 2002, 2003, 2004, 2005 and 2006, respectively.

The EPA has issued ozone transport regulations and final new air quality standards relating to ozone and particulate air pollution. In September 1998, the EPA issued a State Implementation Plan (SIP) call giving states a year to develop new regulations to limit nitrogen oxide emissions because of their contribution to ozone formation. Detroit Edison has spent approximately \$221 million through December 2001 and estimates that it will incur approximately \$400 million to \$500 million of future capital expenditures over the next three years to comply. In March 2000, the U.S. Court of Appeals ruled in favor of the EPA's SIP call regulations. The new air quality standards have been upheld in legal challenges in the U.S. Court of Appeals, but the U.S. Supreme Court has agreed to hear the appeal. Until the legal issues are resolved, management is unable to predict the full impact of the new air quality standards. Under the June 2000 Michigan restructuring legislation, beginning January 1, 2004, annual return of and on this capital expenditure, in excess of current depreciation levels, would be deferred in ratemaking, until after the expiration of the rate cap period, presently expected to end December 31, 2005.

In 1997, Enterprises' 50%-owned partnership, Washington 10 Storage Partnership (W-10), entered into a leveraged lease transaction to finance the conversion of a depleted natural gas reservoir into a 42 Bcf storage facility. The storage facility began operations in mid-1999 and cost \$160 million to develop. Enterprises has entered into a contract with W-10 to market 100% of the capacity of the storage field through 2029. Under the terms of the marketing contract, Enterprises is obligated to generate sufficient revenues to cover W-10's lease payments and certain operating costs, which average approximately \$15 million annually.

To ensure a reliable supply of natural gas at competitive prices, Enterprises has entered into long-term purchase and transportation contracts with various suppliers and producers. In general, purchases are under fixed price and volume contracts or formulas based on market prices. Enterprises has firm purchase commitments through 2015 for approximately 707 Bcf of gas. Enterprises expects that sales, based on warmer-than-normal weather, will exceed its minimum purchase commitments. Enterprises has long-term transportation and storage contracts with various companies expiring on various dates through the year 2016. Enterprises is also committed to pay demand charges of approximately \$89 million during 2002 related to firm purchase and transportation agreements. Of this total, approximately \$37 million relates to MichCon.

The Company has also entered into long-term fuel supply commitments of approximately \$1 billion at December 31, 2001. The Company expects that its 2002 capital expenditures will approximate \$950 million. Certain commitments have been made in connection with such capital expenditures.

Other Contingencies

Electricity and gas is purchased from and sold to numerous companies operating in the steel, automotive, energy and retail industries. A number of customers have filed for bankruptcy in 2001, including certain Enron Corporation affiliates. Certain DTE Energy subsidiaries had open transactions under a variety of agreements with bankrupt Enron affiliates, and such subsidiaries had an aggregate net liability of \$24 million to Enron. There are various netting agreements with Enron affiliates. Internal and external counsel are working to determine the Company's rights within these agreements. The Company has not

Table of Contents

reserved for any exposure, in addition to the net liabilities already recorded, as management cannot estimate a probable loss exposure and currently does not believe the resolution of this matter will have a material impact to the Company.

The Company is involved in certain legal (including commercial matters), administrative and environmental proceedings before various courts, arbitration panels and governmental agencies concerning claims arising in the ordinary course of business. These proceedings include certain contract disputes, environmental reviews and investigations, and pending judicial matters. Management cannot predict the final disposition of such proceedings. Management regularly reviews legal matters and records provisions for claims that are considered probable of loss. The resolution of pending proceedings is not expected to have a material effect on the Company's financial statements in the period they are resolved.

See Notes 4 and 5 for a discussion of contingencies related to Regulatory Matters and Fermi 2.

NOTE 15 RETIREMENT BENEFITS AND TRUSTEED ASSETS

Pension Plan Benefits

The Company has defined benefit retirement plans for all eligible union and nonunion employees. Prior to December 31, 2001, the Company had three separate defined benefit retirement plans. Effective December 31, 2001, two of the defined benefit retirement plans merged into one plan. All of the plans are noncontributory, cover substantially all employees and provide retirement benefits based on the employees' years of benefit service, average final compensation and age at retirement. The Company's policy is to fund pension cost calculated under the projected unit credit actuarial cost method.

Net pension cost for the years ended December 31 includes the following components:

(in Millions)	<u>2001</u>	<u>2000</u>	<u>1999</u>
Service Cost	\$40	\$35	\$35
Interest Cost			
140 107 92

\$435 \$66

Assumptions used in determining the projected benefit obligation at December 31 were as follows:

	<u>2001</u>	<u>2000</u>	<u>1999</u>
Discount rate	7.25%	7.5%	7.5%
Annual increase in future compensation levels	4.0	4.0	4.0
Expected long-term rate of return on Plan assets	9.5	9.5	9.5

There are several supplemental nonqualified, noncontributory, retirement benefit plans for certain management employees.

The Company also sponsors defined contribution retirement savings plans. Participation in one of these plans is available to substantially all union and nonunion employees. The Company matches employee contributions up to certain predefined limits based upon salary and years of credited service. The cost of these plans was \$26 million in 2001, \$22 million in 2000 and \$21 million in 1999.

Table of Contents

Other Postretirement Benefits

The Company provides certain postretirement healthcare and life insurance benefits for retired employees who may become eligible for these benefits if they reach retirement age while working for the Company.

Net postretirement cost for the years ended December 31 includes the following components:

(in Millions)	<u>2001</u>	<u>2000</u>	<u>1999</u>

Net loss
187 44
Prior service cost
(12)
Net transition obligation
226 246

Accrued Postretirement
Asset (Liability)
\$(102) \$56

Assumptions used in determining the projected benefit obligation at December 31 were as follows:

	<u>2001</u>	<u>2000</u>	<u>1999</u>
Discount rate	7.25%	7.5%	7.5%
Expected long-term rate of return on Plan assets			
9.5 9.0 9.0			

Benefit costs were calculated assuming health care cost trend rates beginning at 8.5% for 2002 and decreasing to 5% in 2008 and thereafter for persons under age 65 and decreasing from 9% to 5% for persons age 65 and over. A one-percentage-point increase in health care cost trend rates would have increased the aggregate of the service cost and interest cost components of benefit costs by \$17 million and would have increased the accumulated benefit obligation by \$142 million at December 31, 2001. A one-percentage-point decrease in the health care cost trend rates would have decreased the aggregate of the service cost and interest cost components of benefit costs by \$14 million and would have decreased the accumulated benefit obligation by \$118 million at December 31, 2001.

Table of Contents**Grantor Trust**

MichCon maintains a Grantor Trust which invests in life insurance contracts and income securities. Employees and retirees have no right, title or interest in the assets of the Grantor Trust, and MichCon can revoke the trust subject to providing the MPSC with prior notification.

NOTE 16 STOCK-BASED COMPENSATION

The DTE Energy Company 2001 Stock Incentive Plan was approved by shareholders in 2001. The plan permits the grant of incentive stock options, non-qualifying stock options, stock awards, performance shares and performance units. The maximum aggregate number of shares of common stock that may be issued under this plan is 18 million shares. Participants in the plan include employees of the Company and its Board members. As of December 31, 2001, no performance units have been granted under the plan.

Prior to 2001, stock options, stock awards and performance shares were issued under the Long-Term Incentive Plan adopted in 1995.

Options

Options are exercisable at a rate pursuant to the terms of the individual stock option award agreements. The options will expire 10 years after the date of the grant. The option exercise price equals the fair market value of the stock on the date that the option was granted. Stock option activity was as follows:

	Number of Options	Weighted Average Exercise Price
	<hr/>	<hr/>
Outstanding at January 1, 1999 (58,750 exercisable)	607,375	\$ 33.70
Granted		
428,000 \$41.30		
Exercised		
(11,675) \$30.99		
Canceled		
(24,625) \$31.96		
<hr/>		
Outstanding at December 31, 1999 (194,371 exercisable)		
999,075 \$37.03		
Granted		
2,023,400 \$32.12		
Exercised		
(10,750) \$28.50		
Canceled		
(29,500) \$41.14		
<hr/>		
Outstanding at December 31, 2000 (442,431 exercisable)		
2,982,225 \$33.69		
Granted		
2,775,341 \$42.74		
Exercised		
(402,442) \$32.31		

Canceled
(73,500) \$36.26

Outstanding at December 31,
2001(1,678,870 exercisable at a
weighted average exercise price of
\$35.45)
5,281,624 \$38.51

Table of Contents

The range of exercise prices for options outstanding at December 31, 2001, was \$27.62 to \$46.63. The number, weighted average exercise price and weighted average remaining contractual life of options outstanding were as follows:

Range of Exercise Prices	Number of Options	Weighted Average Exercise Price	Weighted Average Remaining Contractual Life
\$27.62 - \$38.04	1,987,067	\$31.57	7.87 years
\$38.60 - \$42.44			
1,277,887 \$40.51 8.08 years			
\$42.60 - \$43.85			
918,650 \$42.66 9.22 years			
\$45.28 - \$46.63			
1,098,020 \$45.29 9.29 years			
<hr/>			
5,281,624 \$38.51 8.45 years			

The Company applies APB Opinion 25, Accounting for Stock Issued to Employees. Accordingly, no compensation expense has been recorded for options granted. As required by SFAS No. 123, Accounting for Stock-Based Compensation, the Company has determined the pro forma information as if it had accounted for its employee stock options under the fair value method. The fair value for these options was estimated at the date of grant using a modified Black/Scholes option pricing model American style and the following weighted average assumptions:

	2001	2000	1999
Risk-free interest rate	5.40%	6.57%	5.64%
Dividend yield			
4.73% 6.48% 4.95%			
Expected volatility			
19.78% 18.51% 17.28%			
Expected life			
10 years 10 years 10 years			
Fair value per option			
\$8.81 \$5.19 \$7.18			

The pro forma effect of these options would be to reduce pretax income by \$14.4 million, \$2.7 million and \$1.3 million for the years ended December 31, 2001, 2000 and 1999, respectively, and to reduce diluted earnings per share by \$0.06, \$0.02, and \$0.01 for the years ended December 31, 2001, 2000 and 1999, respectively.

Stock Awards

Under the plan, stock awards are granted and restricted for a period not exceeding four years. Certain shares are subject to forfeiture if specified performance objectives are not met. A participant will have all rights of a shareholder with respect to a stock award, including the right to receive dividends and vote the shares; provided, however, that during such period (i) a participant may not sell, transfer, pledge, exchange or otherwise dispose of shares granted pursuant to a stock award; (ii) the Company shall retain custody of the certificates evidencing shares granted pursuant to a stock award; and (iii) the participant will deliver to the Company a stock power with respect to each stock award.

Edgar Filing: DTE ENERGY CO - Form 8-K

The stock awards are recorded at cost, which approximates the market value on the date of grant. The Company accounts for stock awards as unearned compensation, which is reported as a reduction to

Table of Contents

common stock. The cost is amortized to compensation expense over the vesting period. Stock award activity for the years ended December 31 was:

	<u>2001</u>	<u>2000</u>	<u>1999</u>
Restricted common shares awarded	247,640	29,565	99,500
Weighted average market price of shares awarded			
\$44.35 \$32.00 \$40.99			
Compensation cost charged against income (in thousands)			
\$2,484 \$1,130 \$945			

Performance Share Awards

Under the plan, performance shares means an award stated with reference to a specified number of shares of common stock that entitles the holder to receive a cash payment or shares of common stock or a combination thereof. The final number of shares of common stock awarded is determined by the achievement of certain performance objectives, as defined in the Plan. The awards vest as of the end of a specified period. Beginning with the grant date, the Company accounts for performance share awards by accruing an amount based on the following: (i) the number of shares expected to be awarded based on the probable achievement of certain performance objectives, (ii) the market value of the shares, and (iii) the vesting period. For the year ended December 31, 2001, the Company accrued \$1.2 million in compensation expense related to performance share awards.

During the applicable restriction period, the recipient of a performance share award has no shareholder rights until common stock is actually distributed. However, recipients will be paid an amount equal to the dividend equivalent on such shares. Performance share awards are nontransferable and are subject to risk of forfeiture. As of December 31, 2001, there were 277,355 performance share awards outstanding.

NOTE 17 SEGMENT AND RELATED INFORMATION

The Company's reportable business segments are: Electric Utility - Detroit Edison and ITC; Gas Utility - MichCon; Wholesale Marketing & Trading, which consists of the trading and marketing operations of DTE Energy Trading and the natural gas trading and marketing operations of Enterprises; Energy Services, which consists of various businesses that develop and manage energy-related projects and services; Non-regulated other, which represents the operations of energy businesses primarily involved in emerging technologies and various other non-regulated gas operations acquired with the MCN Energy merger; and Corporate & Other, which includes expenses of the Company's corporate operation. The income tax provisions or benefits of DTE Energy's subsidiaries are determined on an individual company basis and recognize the tax benefit of alternate fuels credits and net operating losses. The subsidiaries record income tax payable to or receivable from DTE Energy resulting from the inclusion of its taxable income or loss in DTE Energy's consolidated tax return. Inter-segment revenues are not material. Financial data for business segments are as follows:

Table of Contents**NOTE 20 SUBSEQUENT EVENTS**

Effective January 1, 2002, the Company realigned its internal and external financial reporting structure from six segments (Electric Utility, Gas Utility, Wholesale Marketing & Trading, Energy Services, Other Non-regulated Operations, and Corporate & Other) to three strategic business units (Energy Resources, Energy Distribution and Energy Gas) that have both regulated and non-regulated operations. Based on this structure, management establishes the company's strategic goals, allocates its resources and evaluates its performance. The structural realignment resulted in the following nine reportable segments:

Energy Resources

Regulated operations include the power generation services of Detroit Edison, the Company's electric utility. Electricity is generated from Detroit Edison's numerous fossil plants or its nuclear plant and sold throughout Southeastern Michigan to residential, commercial, industrial and wholesale customers.

Non-regulated

Energy Services is comprised of various businesses that develop and manage energy-related assets and services. Such projects include coke production, synfuels production, independent power plants, on-site energy projects and cogeneration facilities. The economic viability of synfuels projects is tied to their generation of alternate fuels tax credits.

Wholesale Marketing & Trading consists of the electric and gas marketing and trading operations of DTE Energy Trading Company and the natural gas marketing and trading operations of DTE Enterprises, which was acquired as part of the MCN Energy merger. Wholesale Marketing & Trading enters into forwards, futures, swaps and option contracts as part of its trading strategy. Wholesale Marketing & Trading focuses on physical power marketing and structured transactions, as well as the enhancement of returns from its power plant, pipeline and storage assets.

Other non-regulated operations consist of businesses involved in coal services and landfill gas recovery along with an independent generating unit.

Energy Distribution

Regulated operations include the electric distribution services of Detroit Edison, and the electric transmission services of the International Transmission Company (ITC). Energy Distribution distributes electricity generated by Energy Resources and alternative electric suppliers to Detroit Edison's 2.1 million residential, commercial and industrial customers. The transmission assets of ITC are operated by the Midwest Independent System Operator, a regional transmission operator.

Non-regulated operations primarily consist of DTE Energy Technologies, businesses that market and distribute a broad portfolio of distributed generation products, provide application engineering, and monitor and manage system operations.

Energy Gas

Regulated operations include gas distribution services provided by MichCon, the Company's gas utility that purchases, stores and distributes natural gas throughout Michigan to 1.2 million residential, commercial and industrial customers. As previously discussed, the Company acquired MichCon on May 31, 2001, as part of the MCN Energy merger. Accordingly, the operating results of MichCon are included in the Company's consolidated results from the acquisition date.

Non-regulated operations include the exploration and production of gas and the gathering, processing and storing of gas. Certain pipeline and storage assets are used to support the Wholesale Marketing & Trading segment.

Corporate & Other includes administrative and general expenses, and interest costs of DTE Energy corporate that have not been allocated to the regulated and non-regulated businesses. Corporate & Other

Table of Contents

also includes various other non-regulated operations, including investments in new emerging energy technologies.

The income tax provisions or benefits of DTE Energy's subsidiaries are determined on an individual company basis and recognize the tax benefit of alternate fuels credits and net operating losses. The subsidiaries record income tax payable to or receivable from DTE Energy resulting from the inclusion of its taxable income or loss in DTE Energy's consolidated tax return. Inter-segment revenues are not material.

The following information presents the required segment disclosures giving effect for the realignment described above and supercedes the disclosures presented in Note 17.
