

PALATIN TECHNOLOGIES INC
Form S-1
October 29, 2010

As filed with the Securities and Exchange Commission on October 29, 2010

Registration No. 333-

UNITED STATES SECURITIES AND EXCHANGE COMMISSION

WASHINGTON, D.C. 20549

FORM S-1

REGISTRATION STATEMENT UNDER THE SECURITIES ACT OF 1933

PALATIN TECHNOLOGIES, INC.

(Exact name of registrant as specified in its charter)

Delaware	2834	95-4078884
(State or other jurisdiction of incorporation or organization)	(Primary Standard Industrial Classification Code Number)	(I.R.S. Employer Identification Number)

4C Cedar Brook Drive

Cranbury, New Jersey 08512

(609) 495-2200

(Address, including zip code, and telephone number, including area code, of Registrant's principal executive offices)

Stephen T. Wills, Chief Financial Officer

4C Cedar Brook Drive

Cranbury, New Jersey 08512

(609) 495-2200

(Name, address, including zip code, and telephone number,

including area code, of agent for service)

Please send copies of all communications to:

Faith L. Charles, Esq.
Thompson Hine LLP
335 Madison Avenue, 12th Floor
New York, NY 10017
(212) 344-5680

Stephen A. Slusher, Esq.
Chief Legal Officer
4C Cedar Brook Drive
Cranbury, NJ 08512
(609) 495-2200

As soon as practicable after the effective date of this Registration Statement.
(Approximate date of commencement of proposed sale to the public)

If any of the securities being registered on this Form are to be offered on a delayed or continuous basis pursuant to Rule 415 under the Securities Act of 1933 check the following box:

If this Form is filed to register additional securities for an offering pursuant to Rule 462(b) under the Securities Act, please check the following box and list the Securities Act registration statement number of the earlier effective registration statement for the same offering.

If this Form is a post-effective amendment filed pursuant to Rule 462(c) under the Securities Act, check the following box and list the Securities Act registration statement number of the earlier effective registration statement for the same offering.

If this Form is a post-effective amendment filed pursuant to Rule 462(d) under the Securities Act, check the following box and list the Securities Act registration statement number of the earlier effective registration statement for the same offering.

Indicate by check mark whether the registrant is a large accelerated filer, an accelerated filer, a non-accelerated filer, or a smaller reporting company. See the definitions of “large accelerated filer,” “accelerated filer” and “smaller reporting company” in Rule 12b--2 of the Exchange Act.

NOTES TO FEE TABLE:

(1) Estimated solely for the purpose of calculating the registration fee pursuant to Rule 457(o) under the Securities Act of 1933, as amended (the “Securities Act of 1933”).

(2) Pursuant to Rule 416, this registration statement shall be deemed to cover additional securities that may be offered or issued to prevent dilution resulting from stock splits, stock dividends or similar transactions.

(3) No fee is required pursuant to Rule 457(g) under the Securities Act of 1933.

The registrant hereby amends this registration statement on such date or dates as may be necessary to delay its effective date until the registrant shall file a further amendment which specifically states that this registration statement shall thereafter become effective in accordance with Section 8(a) of the Securities Act of 1933, as amended, or until the registration statement shall become effective on such date as the Securities and Exchange Commission, acting pursuant to said Section 8(a), may determine.

The information in this prospectus is not complete and may be changed. We may not sell these securities until the registration statement filed with the Securities and Exchange Commission is effective. This prospectus is not an offer to sell these securities and it is not soliciting an offer to buy these securities in any state where the offer or sale is not permitted.

PROSPECTUS

SUBJECT TO
COMPLETION

October 29, 2010

PALATIN TECHNOLOGIES, INC.

[*] Shares of Common Stock

Warrants to Purchase [*] Shares of Common Stock

We are offering up to [*] shares of our common stock and warrants to purchase up to [*] shares of our common stock. Of the [*] shares of our common stock, [*] shares are to be issued directly to the purchasers at the closing of the offering and the remaining [*] are issuable upon exercise of the warrants. The common stock and warrants will be sold in units, with each unit consisting of one share of common stock and a warrant exercisable for [*] shares of our common stock at an exercise price of [\$ *] per share. Each unit will be sold at a negotiated price of [\$ *] per unit. Units will not be issued or certificated. The shares of common stock and warrants are immediately separable and will be issued separately. The warrants are exercisable [*] issuance and expire [*] years from the date of issuance. For a more detailed description of our common stock and warrants, see the section entitled “Description of the Securities” beginning on page 48 of this prospectus.

Our common stock is quoted on the NYSE Amex under the symbol “PTN.” On October 28, 2010, the closing price of the common stock was \$1.37.

Investing in our securities involves a high degree of risk. You should purchase these units only if you can afford a complete loss of your investment. See “Risk Factors” beginning on page 6 of this prospectus.

Neither the Securities and Exchange Commission nor any state securities commission has approved or disapproved of these securities or passed upon the adequacy or accuracy of this prospectus. Any representation to the contrary is a criminal offense.

	Per Unit	Maximum Offering Amount
Public offering price	\$ __. __	\$ [*]
Placement agent fees	\$ __. __	\$ [*]
Proceeds to us, before expenses	\$ __. __	\$ [*]

We have retained [*] to act as our exclusive placement agent in connection with this offering. In addition, [*] may engage one or more sub-placement agents or selected dealers. We have agreed to pay the placement agent the placement agent fees set forth in the table below, which assumes that we sell all of the units we are offering. We have also agreed to issue the placement agent or its designees warrants to purchase common stock and to reimburse the placement agent for certain of its expenses as described under “Plan of Distribution” in this prospectus. The placement agent is not required to arrange for the sale of any specific number of units or dollar amount but will use its best efforts to arrange for the sale of all of the units.

We intend to close this offering within [*] days from the date of this prospectus, unless the offering is fully subscribed before that date or we decide to terminate the offering prior to that date. In either event, the offering may be closed without further notice to you. We do not intend to have multiple closings. We have not arranged to place the funds in an escrow, trust or similar account.

We estimate the total expenses of this offering, excluding the placement agent fees, will be approximately \$[*]. Because there is no minimum offering amount required as a condition to closing in this offering, the actual offering amount, the placement agent fees and net proceeds to us, if any, in this offering may be substantially less than the maximum offering amounts set forth above.

[*]

The date of this prospectus is _____, 2010

PROSPECTUS SUMMARY

This summary highlights certain information appearing elsewhere in this prospectus. This summary is not complete and does not contain all of the information you should consider prior to investing. After you read this summary, you should read and consider carefully the more detailed information and financial statements and related notes that we include in this prospectus, especially the sections entitled “Risk Factors” and “Management’s Discussion and Analysis of Financial Condition and Results of Operation.” If you invest in our securities, you are assuming a high degree of risk.

Unless we have indicated otherwise or the context otherwise requires, references in the prospectus to “Palatin,” the “Company,” “we,” “us” and “our” or similar terms are to Palatin Technologies, Inc. and its subsidiary.

Our Company

We are a biopharmaceutical company dedicated to the development of peptide, peptide mimetic and small molecule agonist compounds with a focus on melanocortin and natriuretic peptide receptor systems. We have a pipeline of development programs targeting melanocortin and natriuretic receptors, including development of proposed products for treatment of sexual dysfunction, acute asthma, heart failure, hypertension, obesity, diabetes and metabolic syndrome.

Our Product Candidates

We currently have the following active drug development programs:

- Bremelanotide, a peptide melanocortin receptor agonist, for treatment of sexual dysfunction, targeting female sexual dysfunction (FSD) and erectile dysfunction (ED) in patients non-responsive to current therapies.
 - Peptide melanocortin receptor agonists for treatment of FSD and ED.
- PL-3994, a peptide mimetic natriuretic peptide receptor A (NPR-A) agonist, for treatment of acute exacerbations of asthma, heart failure and refractory or difficult-to-control hypertension.

We have licensed several families of melanocortin receptor-based compounds for treatment of obesity, diabetes and related metabolic syndrome to AstraZeneca AB (AstraZeneca) pursuant to our research collaboration and license agreement with AstraZeneca.

Recent Events

Reverse Stock Split. On September 24, 2010, we announced that we were implementing a one-for-ten reverse stock split of our common stock, which had been authorized by our stockholders at our annual meeting held on May 13, 2010. The reverse stock split, which became effective on September 27, 2010, reduced the number of shares of our common stock issued and outstanding from approximately 118.2 million to approximately 11.8 million. All share and per share amounts in this prospectus, including shares of common stock issuable upon exercise, vesting or conversion of all outstanding options, warrants and convertible preferred stock, are presented on a post-reverse-split basis.

Realignment of Resources. On September 24, 2010, we announced our strategic decision to focus resources and efforts on clinical trials for bremelanotide and PL-3994 and preclinical development of an inhaled formulation of PL-3994 and a new peptide drug candidate for sexual dysfunction. As part of this decision, we have suspended further research and development efforts on new product candidates and are implementing a reduction in staffing levels. We anticipate having no more than twenty employees by December 31, 2010.

Strategy

Key elements of our business strategy include: using our technology and expertise to develop and commercialize products in our active drug development programs; entering into alliances and partnerships with pharmaceutical companies to facilitate the development, manufacture, marketing, sale and distribution of product candidates we are developing; and, partially funding our product development programs with the cash flow from our AstraZeneca research collaboration and license agreement and any future agreements with other companies.

Summary Financial Information

The following table summarizes our financial data. We have derived this summary for the fiscal years ended June 30, 2010 and 2009 from our audited consolidated financial statements appearing elsewhere in this prospectus. This summary of our financial data should be read together with our consolidated financial statements and related notes and the section entitled “Risk Factors” and “Management’s Discussion and Analysis of Financial Condition and Results of Operation” in this prospectus.

Statement of Operations Data:	Year Ended	
	2010	2009
Revenues	\$ 14,180,727	\$ 11,351,774
Operating expenses	17,195,113	18,653,610
Other income and tax benefit	1,221,878	2,499,604
Net loss	\$ (1,792,508)	\$ (4,802,232)
Balance Sheet Data:		
Current assets	\$ 9,263,811	\$ 8,819,664
Total assets	12,388,877	13,199,811
Current liabilities	2,394,931	8,670,332
Total liabilities	3,070,604	9,886,312

Company Information

We incorporated in Delaware in 1986 and commenced operations in the biopharmaceutical area in 1996. Our corporate offices and research and development facility are located at 4C Cedar Brook Drive, Cranbury, New Jersey 08512 and our telephone number is (609) 495-2200.

This prospectus contains trademarks of others, including Viagra®, Levitra®, Cialis®, Caverject Impulse®, MUSE® and Natrecor®. Viagra® is a registered trademark of Pfizer Inc., Levitra® is a registered trademark of Bayer Aktiengesellschaft, Cialis® is a registered trademark of Eli Lilly and Company, Caverject Impulse® is a registered trademark of Pharmacia & Upjohn Company LLC, MUSE® is a registered trademark of VIVUS, Inc. and Natrecor® is a registered trademark of Scios Inc.; we claim no rights to these drugs or these trademarks.

THE OFFERING

Securities offered	Up to _____ units. Each unit will consist of one share of common stock and one warrant. Each warrant entitles its holder to purchase _____ shares of our common stock. The common stock and warrants comprising the units will be issued separately.
Offering price	\$ _____ per unit.
Description of warrants	The warrants will be exercisable [*] until the [*] anniversary of the issuance date at an exercise price of \$ _____ per share.
Common stock outstanding before this offering	_____ shares.
Common stock to be outstanding after this offering	_____ shares, which does not include _____ shares of common stock issuable upon exercise of the warrants included in the offered units.
Use of proceeds	We plan to use the net proceeds of this offering to further develop our product candidates and for general working capital purposes. For a more complete description of our intended use of proceeds from this offering, see “Use of Proceeds.”
Risk factors	You should read the “Risk Factors” section of, and all of the other information set forth in, this prospectus for a discussion of factors to consider carefully before deciding to invest in our securities.
NYSE Amex symbol	“PTN”

The number of shares of our common stock to be outstanding after the closing of this offering is based on 11,839,028 shares of our common stock outstanding as of October 28, 2010 and excludes:

- 927,501 shares of common stock issuable upon exercise of options outstanding and having a weighted average exercise price of \$11.77 per share;
- 1,553,248 shares of common stock issuable upon exercise of warrants outstanding and having a weighted average exercise price of \$8.49;
- [*] shares of common stock issuable upon exercise of warrants included in the units in this offering, assuming all offered units are sold;
- 80,500 shares of common stock issuable under restricted stock units that vest no later than March 15, 2011, subject to the fulfillment of service conditions;

- 259,078 shares of common stock reserved for future issuance under our 2005 Stock Plan; and
- 26,865 shares of common stock issuable upon conversion of immediately convertible Series A Convertible Preferred Stock outstanding.

RISK FACTORS

You should carefully consider the risks described below and other information in this prospectus, including the financial statements and related notes that appear at the end of this prospectus, before deciding to invest in our securities. These risks should be considered in conjunction with any other information included herein, including in conjunction with forward-looking statements made herein. If any of the following risks actually occur, they could materially adversely affect our business, financial condition, operating results or prospects. Additional risks and uncertainties that we do not presently know or that we currently deem immaterial may also impair our business, financial condition, operating results and prospects.

Risks Relating to our Company

We will continue to incur substantial losses over the next few years and we may never become profitable.

We have never been profitable and we may never become profitable. As of June 30, 2010, we had an accumulated deficit of \$209.2 million. We expect to incur additional losses as we continue our development of bremelanotide, PL-3994 and other product candidates. Unless and until we receive approval from the U. S. Food and Drug Administration (FDA) or other equivalent regulatory authorities outside the United States, we cannot sell our products and will not have product revenues from them. Therefore, for the foreseeable future, we will have to fund all of our operations and capital expenditures from reimbursements and other contract revenue under collaborative development agreements, existing cash balances and outside sources of financing, which may not be available on acceptable terms, if at all.

We need to raise additional funds and will need to continue to raise funds in the future, and funds may not be available on acceptable terms, or at all.

As of June 30, 2010, we had cash and cash equivalents of \$5.4 million and available-for-sale investments of \$3.5 million, with current liabilities of \$2.4 million. We have curtailed our operations significantly, including suspending early stage research and discovery programs and implementing a reduction in our workforce. However, our available working capital will not fund our currently planned operations for the next twelve months. We will also need additional funds to continue development of bremelanotide and PL-3994, including planned clinical trials and preclinical development efforts.

We may raise additional funds through this offering or through other public or private equity financings, debt financings, collaborative arrangements on our product candidates or other sources. However, additional funding may not be available on acceptable terms, or at all. To obtain additional funding, we may need to enter into arrangements that require us to develop only certain of our product candidates or relinquish rights to certain technologies, product candidates and/or potential markets.

If we are unable to raise sufficient additional funds, we will implement plans for the orderly wind down of our business operations, including curtailing operations significantly and further decreasing staffing levels, and will seek to license, sell or otherwise dispose of our product candidates, technologies and contractual rights, including rights under our research collaboration and license agreement with AstraZeneca, on the best possible terms available. Even if we are able to license, sell or otherwise dispose of our product candidates, technologies and contractual rights, it is likely to be on unfavorable terms and for less value than if we had the financial resources to develop or otherwise advance our product candidates, technologies and contractual rights ourselves.

Our independent registered public accounting firm has expressed doubt about our ability to continue as a going concern, which may hinder our ability to obtain future financing.

Our consolidated financial statements as of June 30, 2010 have been prepared under the assumption that we will continue as a going concern. Our independent registered public accounting firm has issued a report dated September 27, 2010 that included an explanatory paragraph referring to our recurring net losses and negative cash flows from operations and expressing substantial doubt in our ability to continue as a going concern. Our ability to continue as a going concern is dependent upon our ability to obtain additional equity financing or other capital, attain further operating efficiencies, reduce expenditures, and, ultimately, to generate revenue. The consolidated financial statements do not include any adjustments that might result from the outcome of this uncertainty. We are continually evaluating opportunities to raise additional funds through public or private equity financings, as well as evaluating prospective business partners, and will continue to do so. However, if adequate funds are not available to us when we need it, and we are unable to enter into some form of strategic relationship that will give us access to

additional cash resources, we will be required to even further curtail our operations which would, in turn, further raise substantial doubt about our ability to continue as a going concern.

We have a limited operating history upon which to base an investment decision.

Our operations are primarily focused on acquiring, developing and securing our proprietary technology, conducting preclinical and clinical studies and formulating and manufacturing on a small-scale basis our principal product candidates. These operations provide a limited basis for stockholders to assess our ability to commercialize our product candidates.

We have not yet demonstrated our ability to perform the functions necessary for the successful commercialization of any of our current product candidates. The successful commercialization of our product candidates will require us to perform a variety of functions, including:

- continuing to conduct preclinical development and clinical trials;
- participating in regulatory approval processes;
- formulating and manufacturing products, or having third parties formulate and manufacture products;
 - post-approval monitoring and surveillance of our products;
- conducting sales and marketing activities, either alone or with a partner; and
 - obtaining additional capital.

If we are unable to obtain regulatory approval of any of our product candidates, to successfully commercialize any products for which we receive regulatory approval or to obtain additional capital, we may not be able to recover our investment in our development efforts.

Budget constraints negatively impact our research and development, forcing us to delay our efforts to develop certain product candidates in favor of developing others, which may prevent us from commercializing our product candidates as quickly as possible.

Research and development is an expensive process. As part of our plan to realign resources, we have decided to focus resources and efforts on clinical trials for bremelanotide and PL-3994 and preclinical development of an inhaled formulation of PL-3994 and a new peptide drug candidate for sexual dysfunction. As part of this decision, we have suspended further research and development efforts on new product candidates. We do not currently have sufficient funds to progress the programs we have prioritized, and clinical trial and development priorities may change depending on terms required by investors in our company, including investors in this offering. Because we have had to prioritize our development candidates as a result of budget constraints, and because these priorities may change, we may not be able to fully realize the value of our product candidates in a timely manner, if at all.

Development and commercialization of our product candidates involves a lengthy, complex and costly process, and we may never successfully develop or commercialize any product.

Our product candidates are at various stages of research and development, will require regulatory approval, and may never be successfully developed or commercialized. Our product candidates will require significant further research, development and testing before we can seek regulatory approval to market and sell them.

We must demonstrate that our product candidates are safe and effective for use in patients in order to receive regulatory approval for commercial sale. Preclinical studies in animals, using various doses and formulations, must be performed before we can begin human clinical trials. Even if we obtain favorable results in the preclinical studies, the results in humans may be different. Numerous small-scale human clinical trials may be necessary to obtain initial data on a product candidate's safety and efficacy in humans before advancing to large-scale human clinical trials. We face the risk that the results of our trials in later phases of clinical trials may be inconsistent with those obtained in earlier phases. Adverse or inconclusive results could delay the progress of our development programs and may prevent us from filing for regulatory approval of our product candidates. Additional factors that can cause delay or termination of our human clinical trials include:

- the availability of sufficient capital to sustain operations and clinical trials;
- timely completion of clinical site protocol approval and obtaining informed consent from subjects;
 - the rate of patient enrollment in clinical studies;

- adverse medical events or side effects in treated patients; and
- lack of effectiveness of the product being tested.

You should evaluate us in light of these uncertainties, delays, difficulties and expenses commonly experienced by early stage biopharmaceutical companies, as well as unanticipated problems and additional costs relating to:

- product approval or clearance;
- regulatory compliance;
- good manufacturing practices;
- intellectual property rights;
- product introduction; and
- marketing and competition.

The regulatory approval process is lengthy, expensive and uncertain, and may prevent us from obtaining the approvals we require.

Government authorities in the United States and other countries extensively regulate the advertising, labeling, storage, record-keeping, safety, efficacy, research, development, testing, manufacture, promotion, marketing and distribution of drug products. Drugs are subject to rigorous regulation by the FDA and similar regulatory bodies in other countries. The steps ordinarily required by the FDA before a new drug may be marketed in the United States include:

- completion of non-clinical tests including preclinical laboratory and formulation studies and animal testing and toxicology;
- submission to the FDA of an Investigational New Drug (IND) application, which must become effective before clinical trials may begin;
- performance of adequate and well-controlled Phase 1, 2 and 3 human clinical trials to establish the safety and efficacy of the drug for each proposed indication;
- submission to the FDA of a New Drug Application (NDA); and
- FDA review and approval of the NDA before any commercial marketing or sale.

Satisfaction of FDA pre-market approval requirements for new drugs typically takes a number of years and the actual time required for approval may vary substantially based upon the type, complexity and novelty of the product or disease. The results of product development, preclinical studies and clinical trials are submitted to the FDA as part of an NDA. The NDA also must contain extensive manufacturing information. Once the submission has been accepted for filing, the FDA generally has ten months to review the application and respond to the applicant. The review process is often significantly extended by FDA requests for additional information or clarification. Success in early stage clinical trials does not assure success in later stage clinical trials. Data obtained from clinical trials is not always conclusive and may be susceptible to varying interpretations that could delay, limit or prevent regulatory approval. The FDA may refer the NDA to an advisory committee for review, evaluation and recommendation as to whether the

application should be approved, but the FDA is not bound by the recommendation of the advisory committee. The FDA may deny or delay approval of applications that do not meet applicable regulatory criteria or if the FDA determines that the clinical data do not adequately establish the safety and efficacy of the drug. Therefore, our proposed products could take a significantly longer time than we expect or may never gain approval. If regulatory approval is delayed or never obtained, our business and our liquidity would be adversely affected.

Upon approval, a product candidate may be marketed only in those dosage forms and for those indications approved by the FDA. Once approved, the FDA may withdraw the product approval if compliance with regulatory requirements is not maintained or if problems occur after the product reaches the marketplace. In addition, the FDA may require post-marketing studies, referred to as Phase 4 studies, to monitor the approved products in a larger number of patients than were required for product approval and may limit further marketing of the product based on the results of these post-market studies. The FDA has broad post-market regulatory and enforcement powers,

including the ability to seek injunctions, levy fines and civil penalties, criminal prosecution, withdraw approvals and seize products or request recalls.

If regulatory approval of any of our product candidates is granted, it will be limited to certain disease states or conditions. Adverse experiences with the product must be reported to the FDA and could result in the imposition of market restriction through labeling changes or in product removal. Product approvals may be withdrawn if compliance with regulatory requirements is not maintained or if problems concerning safety or efficacy of the product occur following approval.

Outside the United States, our ability to market our product candidates will also depend on receiving marketing authorizations from the appropriate regulatory authorities. The foreign regulatory approval process generally includes all of the risks associated with FDA approval described above. The requirements governing the conduct of clinical trials and marketing authorization vary widely from country to country. At present, foreign marketing authorizations are applied for at a national level, although within the European Community, or EC, registration procedures are available to companies wishing to market a product to more than one EC member state. If the regulatory authority is satisfied that adequate evidence of safety, quality and efficiency has been presented, a marketing authorization will be granted.

If any approved product does not achieve market acceptance, our business will suffer.

Regulatory approval for the marketing and sale of any of our product candidates does not assure the product's commercial success. Any approved product will compete with other products manufactured and marketed by major pharmaceutical and other biotechnology companies. The degree of market acceptance of any such product will depend on a number of factors, including:

- perceptions by members of the healthcare community, including physicians, about its safety and effectiveness;
- cost-effectiveness relative to competing products and technologies;
- availability of reimbursement for our products from third party payors such as health insurers, health maintenance organizations and government programs such as Medicare and Medicaid; and
- advantages over alternative treatment methods.

If any approved product does not achieve adequate market acceptance, our business, financial condition and results of operations will be adversely affected.

We rely on third parties to conduct clinical trials for our product candidates and their failure to timely perform their obligations could significantly harm our product development.

We rely on outside scientific collaborators such as researchers at clinical research organizations and universities in certain areas that are particularly relevant to our research and product development plans, such as the conduct of clinical trials and non-clinical tests. There is competition for these relationships, and we may not be able to maintain our relationships with them on acceptable terms. These outside collaborators generally may terminate their engagements with us at any time. As a result, we can control their activities only within certain limits, and they will devote only a certain amount of their time to conduct research on our product candidates and develop them. If they do not successfully carry out their duties under their agreements with us, fail to inform us if these trials fail to comply with clinical trial protocols or fail to meet expected deadlines, our ability to develop our product candidates and obtain regulatory approval on a timely basis, if at all, may be adversely affected.

Production and supply of our product candidates depend on contract manufacturers over whom we have no control.

We do not have the facilities to manufacture bremelanotide, PL-3994, melanocortin receptor agonist compounds or our other potential products. Our contract manufacturers must perform these manufacturing activities in a manner that complies with FDA regulations. Our ability to control third-party compliance with FDA requirements will be limited to contractual remedies and rights of inspection. The manufacturers of approved products and their manufacturing facilities will be subject to continual review and periodic inspections by the FDA and other authorities where applicable, and must comply with ongoing regulatory requirements, including the FDA's current good manufacturing practices (GMPs) regulations. Failure of third-party manufacturers to comply with GMPs or other FDA requirements may result in enforcement action by the FDA. Failure to conduct their activities in compliance with FDA regulations could delay our development programs or negatively impact our ability to receive

FDA approval of our potential products or continue marketing if they are approved. Establishing relationships with new suppliers, who must be FDA-approved, is a time-consuming and costly process.

We are subject to extensive regulation in connection with the laboratory practices and the hazardous materials we use.

We are subject to various laws and regulations regarding laboratory practices, the experimental use of animals and the use and disposal of hazardous or potentially hazardous substances in connection with our research. In each of these areas, as noted above, the FDA and other regulatory authorities have broad regulatory and enforcement powers, including the ability to levy fines and civil penalties, suspend or delay issuance of approvals, seize or recall products and withdraw approvals, any one or more of which could have a material adverse effect on us. We are also subject to numerous federal, state and local laws relating to such matters as safe working conditions, manufacturing practices, environmental protection, fire hazard control and disposal of hazardous or potentially hazardous substances. Even though we have suspended research and development efforts on new product candidates, we are maintaining selected laboratory capabilities, and will be subject to regulations in connection with decommissioning animal facilities, disposal of chemicals and hazardous or potentially hazardous substances, and decommissioning and disposing of laboratory equipment. We may incur significant costs to comply with such laws and regulations now or in the future.

Contamination or injury from hazardous materials used in the development of our products could result in a liability exceeding our financial resources.

Our research and development has involved the use of hazardous materials and chemicals, including radioactive compounds. We cannot completely eliminate the risk of contamination or injury from these materials. In the event of contamination or injury, we may be responsible for any resulting damages. Damages could be significant and could exceed our financial resources, including the limits of our insurance.

We have no experience in marketing, distributing and selling products and will substantially rely on our marketing partners to provide these capabilities.

We are developing bremelanotide and melanocortin receptor agonist compounds for sexual dysfunction and PL-3994 for the treatment of asthma, heart failure and related indications. We do not have marketing partners for any of these products. If any of these products are approved by the FDA or other regulatory authorities, we must either develop marketing, distribution and selling capacity and expertise, which will be costly and time consuming, or enter into agreements with other companies to provide these capabilities. We may not be able to enter into suitable agreements on acceptable terms, if at all.

We do not control the development of compounds licensed to third parties and, as a result, we may not realize a significant portion of the potential value of any such license arrangements.

Under our research collaboration and license agreement with AstraZeneca for our melanocortin-based therapeutic compounds for obesity, diabetes and related metabolic syndrome, we have no direct control over the development of compounds and have only limited, if any, input on the direction of development efforts. If the results of development efforts are negative or inconclusive, AstraZeneca may decide to abandon further development of this program, including terminating the agreement, by giving us notice of termination. Because much of the potential value of the license arrangement with AstraZeneca is contingent upon the successful development and commercialization of the licensed technology, the ultimate value of this license will depend on the efforts of AstraZeneca. If AstraZeneca does not succeed in developing the licensed technology for any reason, or elects to discontinue the development of this program, we may be unable to realize the potential value of this arrangement.

Competing products and technologies may make our proposed products noncompetitive.

There are a number of other products being developed for FSD and ED. In addition to three oral FDA-approved phosphodiesterase-5 (PDE-5) inhibitor drugs for the treatment of ED, there are other approved products and devices, and other products are being developed and are in clinical trials. There is competition to develop drugs for ED in patients non-responsive to PDE-5 inhibitor drugs, and to develop drugs for treatment of FSD.

There are a large number of products approved for use in asthma, and a number of other products being developed for treatment of acute exacerbations of asthma, including products in clinical trials. There is intense competition to develop drugs for treatment of acute exacerbations of asthma.

We are aware of one recombinant natriuretic peptide product for acutely decompensated congestive heart failure approved and marketed in the United States, and another recombinant natriuretic peptide product approved

and marketed in Japan. Clinical trials on other natriuretic peptide products are being conducted in the United States. In addition, other products for treatment of heart failure are either currently being marketed or in development.

The biopharmaceutical industry is highly competitive. We are likely to encounter significant competition with respect to bremelanotide, other melanocortin receptor agonist compounds and PL-3994. Most of our competitors have substantially greater financial and technological resources than we do. Many of them also have significantly greater experience in research and development, marketing, distribution and sales than we do. Accordingly, our competitors may succeed in developing, marketing, distributing and selling products and underlying technologies more rapidly than we can. These competitive products or technologies may be more effective and useful or less costly than bremelanotide, other melanocortin receptor agonist compounds or PL-3994. In addition, academic institutions, hospitals, governmental agencies and other public and private research organizations are also conducting research and may develop competing products or technologies on their own or through strategic alliances or collaborative arrangements.

Our ability to achieve revenues from the sale of our products in development will depend, in part, on our ability to obtain adequate reimbursement from Medicare, Medicaid, private insurers and other healthcare payers.

Our ability to successfully commercialize our products in development will depend, in significant part, on the extent to which we or our marketing partners can obtain reimbursement for our products and also reimbursement at appropriate levels for the cost of our products and related treatment. Obtaining reimbursement from governmental payers, insurance companies, health maintenance organizations (HMOs) and other third-party payers of healthcare costs is a time-consuming and expensive process. There is no guarantee that our products will ultimately be reimbursed. If we are able to obtain reimbursement, continuing efforts by governmental and third party payers to contain or reduce costs of healthcare may adversely affect our future revenues and ability to achieve profitability. Third-party payers are increasingly challenging the prices charged for diagnostic and therapeutic products and related services. Reimbursement from governmental payers is subject to statutory and regulatory changes, retroactive rate adjustments, administrative rulings and other policy changes, all of which could materially decrease the range of products for which we are reimbursed or the rates of reimbursement by government payers. In addition, recent legislation reforming the healthcare system may result in lower prices or the actual inability of prospective customers to purchase our products in development. The cost containment measures that healthcare payers and providers are instituting and the effect of any healthcare reform could materially and adversely affect our ability to operate profitably. Furthermore, even if reimbursement is available, it may not be available at price levels sufficient for us to realize a positive return on our investment.

If we fail to adequately protect or enforce our intellectual property rights or secure rights to patents of others, the value of our intellectual property rights would diminish.

Our success, competitive position and future revenues will depend in part on our ability and the abilities of our licensors to obtain and maintain patent protection for our products, methods, processes and other technologies, to preserve our trade secrets, to prevent third parties from infringing on our proprietary rights and to operate without infringing the proprietary rights of third parties. We cannot predict:

- the degree and range of protection any patents will afford us against competitors, including whether third parties will find ways to invalidate or otherwise circumvent our patents;
- if and when patents will be issued;
- whether or not others will obtain patents claiming aspects similar to those covered by our patents and patent applications; and

- whether we will need to initiate litigation or administrative proceedings, which may be costly whether we win or lose.

If our products, methods, processes and other technologies infringe the proprietary rights of other parties, we could incur substantial costs and we may have to:

- obtain licenses, which may not be available on commercially reasonable terms, if at all;
- redesign our products or processes to avoid infringement;
- stop using the subject matter claimed in the patents held by others;
- pay damages; or

- defend litigation or administrative proceedings, which may be costly whether we win or lose, and which could result in a substantial diversion of our management resources.

If we are unable to keep our trade secrets confidential, our technologies and other proprietary information may be used by others to compete against us.

In addition to our reliance on patents, we attempt to protect our proprietary technologies and processes by relying on trade secret laws and agreements with our employees and other persons who have access to our proprietary information. These agreements and arrangements may not provide meaningful protection for our proprietary technologies and processes in the event of unauthorized use or disclosure of such information. In addition, our competitors may independently develop substantially equivalent technologies and processes or gain access to our trade secrets or technology, either of which could materially and adversely affect our competitive position.

We may incur substantial liabilities and may be required to limit commercialization of our products in response to product liability lawsuits.

The testing and marketing of medical products entails an inherent risk of product liability. If we cannot successfully defend ourselves against product liability claims, we may incur substantial liabilities or be required to limit commercialization of our products or cease clinical trials. Our inability to obtain sufficient product liability insurance at an acceptable cost to protect against potential product liability claims could prevent or inhibit the commercialization of pharmaceutical products we develop, alone or with corporate collaborators. We currently carry liability insurance as to certain clinical trial risks. We, or any corporate collaborators, may not in the future be able to obtain insurance at a reasonable cost or in sufficient amounts, if at all. Even if our agreements with any future corporate collaborators entitle us to indemnification against losses, such indemnification may not be available or adequate should any claim arise.

We are highly dependent on our management team, senior research professionals and third-party contractors and consultants, and the loss of their services could materially adversely affect our business.

We rely on our management team, our employees and various contractors and consultants to provide critical services. Our ability to execute our bremelanotide and PL-3994 clinical programs and our preclinical programs on an inhaled formulation of PL-3994 and a new peptide drug candidate for sexual dysfunction depends on our continued retention and motivation of our management and scientific personnel, including executive officers and senior members of development and management who possess significant technical expertise and experience and oversee our development programs. Our success also depends on our ability to develop and maintain relationships with contractors, consultants and scientific advisors. If we lose the services of existing personnel or fail to attract new personnel, our development programs could be adversely affected. Competition for personnel is intense. In addition, because of our reduction in staffing levels we anticipate we will need to hire consultants or contractors for development activities previously undertaken by our employees.

Anti-takeover provisions of Delaware law and our charter documents may make potential acquisitions more difficult and could result in the entrenchment of management.

We are incorporated in Delaware. Anti-takeover provisions of Delaware law and our charter documents may make a change in control or efforts to remove management more difficult. Also, under Delaware law, our board of directors may adopt additional anti-takeover measures. Under Section 203 of the Delaware General Corporation Law, a corporation may not engage in a business combination with an “interested stockholder” for a period of three years after the date of the transaction in which the person first becomes an “interested stockholder,” unless the business combination is approved in a prescribed manner.

Pursuant to approvals by our stockholders at the annual meeting of stockholders held on May 13, 2010, effective July 23, 2010 we increased our authorized common stock from 150,000,000 to 400,000,000, and on September 27, 2010 we implemented a one-for-ten reverse stock split, which reduced our authorized common stock to 40,000,000 shares. This could have the effect of making it more difficult for a third party to acquire a majority of our outstanding voting stock.

Our charter authorizes us to issue up to 10,000,000 shares of preferred stock and to determine the terms of those shares of stock without any further action by our stockholders. If we exercise this right, it could be more difficult for a third party to acquire a majority of our outstanding voting stock.

In addition, our equity incentive plans generally permit us to accelerate the vesting of options and other stock rights granted under these plans in the event of a change of control. If we accelerate the vesting of options or other stock rights, this action could make an acquisition more costly.

The application of these provisions could have the effect of delaying or preventing a change of control, which could adversely affect the market price of our common stock.

Risks Relating to Owning our Common Stock

Our stock price is volatile and we expect it to remain volatile, which could limit investors' ability to sell stock at a profit.

The volatile price of our stock makes it difficult for investors to predict the value of their investment, to sell shares at a profit at any given time, or to plan purchases and sales in advance. A variety of factors may affect the market price of our common stock. These include, but are not limited to:

- publicity regarding actual or potential clinical results relating to products under development by our competitors or us;
- delay or failure in initiating, completing or analyzing preclinical or clinical trials or unsatisfactory designs or results of these trials;
- interim decisions by regulatory agencies, including the FDA, as to clinical trial designs, acceptable safety profiles and the benefit/risk ratio of products under development;
 - achievement or rejection of regulatory approvals by our competitors or by us;
- announcements of technological innovations or new commercial products by our competitors or by us;
 - developments concerning proprietary rights, including patents;
 - developments concerning our collaborations;
 - regulatory developments in the United States and foreign countries;
 - economic or other crises and other external factors;
- period-to-period fluctuations in our revenue and other results of operations;
 - changes in financial estimates by securities analysts; and
 - sales of our common stock.

We will not be able to control many of these factors, and we believe that period-to-period comparisons of our financial results will not necessarily be indicative of our future performance. If our revenues, if any, in any particular period do not meet expectations, we may not be able to adjust our expenditures in that period, which could cause our operating results to suffer further. If our operating results in any future period fall below the expectations of securities analysts or investors, our stock price may fall by a significant amount.

For the 12 month period ended September 30, 2010, the price of our stock has been volatile, ranging from a high of \$4.40 per share to a low of \$1.26 per share.

In addition, the stock market in general, and the market for biotechnology companies in particular, has experienced extreme price and volume fluctuations that may have been unrelated or disproportionate to the operating performance of individual companies. These broad market and industry factors may seriously harm the market price of our common stock, regardless of our operating performance.

We have implemented a reverse stock split, which has reduced our trading volume and may result in a decrease in our market capitalization.

Effective September 27, 2010, we implemented a one-for-ten reverse stock split. This reverse stock split was implemented because we had received notice that the NYSE Amex deemed it appropriate for us to effect a reverse stock split because of the low selling price of our common stock. At our annual meeting of stockholders held on May 13, 2010, the stockholders authorized a reverse stock split. We cannot guarantee that the price increase of our common stock price resulting from the reverse split will:

- be proportionate to the reverse split ratio;

- last in the marketplace for any length of time;
- remain at a price sufficient to meet the listing requirements of the NYSE Amex; or
 - be sufficient to facilitate raising capital.

Our stock has previously been subject to delisting proceedings on NYSE Amex and could be subject to such proceedings in the future.

Our common stock trades on NYSE Amex. In December 2008 we received notice from NYSE Amex that we did not meet continued listing standards based on minimum stockholders' equity requirements. While we have cured those deficiencies, it is possible that we could fall out of compliance again in the future. If we fail to maintain compliance with continued listing standards, then we could be delisted from NYSE Amex. If we are delisted from NYSE Amex then our common stock will trade, if at all, only on the over-the-counter market, and then only if one or more registered broker-dealer market makers comply with quotation requirements. Delisting of our common stock could also further depress our stock price, substantially limit liquidity of our common stock and materially adversely affect our ability to raise capital on terms acceptable to us, or at all. Delisting from NYSE Amex could also have other negative results, including the potential loss of confidence by suppliers and employees, the loss of institutional investor interest and fewer business development opportunities.

We do not intend to pay cash dividends in the foreseeable future.

We do not anticipate paying any cash dividends in the foreseeable future and intend to retain future earnings, if any, for the development and expansion of our business. In addition, the terms of existing or future agreements may limit our ability to pay dividends. Therefore, our stockholders will not receive a return on their shares unless the value of their shares increases.

Risks Related to this Offering

You will experience immediate and substantial dilution as a result of this offering.

As of June 30, 2010, we had a net tangible book value of \$9.3 million which yields a net tangible book value of approximately \$0.79 per share of common stock, assuming the conversion of all then convertible preferred stock and no exercise of any warrants or options. The net tangible book value per share is less than the current market price per share. If you pay more than the net tangible book value per share for stock in this offering, you will experience immediate dilution.

As of October 28, 2010, there were 2,588,114 shares of common stock underlying outstanding convertible preferred stock, options, warrants and restricted stock units, and you may experience dilution from the conversion of preferred stock, exercise of outstanding options and warrants and the vesting of restricted stock units.

As of October 28, 2010, holders of our outstanding dilutive securities had the right to acquire the following amounts of underlying common stock:

- 26,865 shares issuable on the conversion of immediately convertible Series A Convertible preferred stock, subject to adjustment, for no further consideration;
- 1,553,248 shares issuable on the exercise of warrants, at exercise prices ranging from \$2.00 to \$40.00 per share;

- 927,501 shares issuable on the exercise of stock options, at exercise prices ranging from \$1.30 to \$47.00 per share; and
- 80,500 shares issuable under restricted stock units that vest no later than March 15, 2011, subject to the fulfillment of service conditions.

If the holders convert, exercise or receive those securities, or similar dilutive securities we may issue in the future, stockholders may experience dilution in the net tangible book value of their common stock. In addition, the sale or availability for sale of the underlying shares in the marketplace could depress our stock price. We have registered or agreed to register for resale substantially all of the underlying shares listed above. Holders of registered underlying shares could resell the shares immediately upon issuance, resulting in significant downward pressure on our stock.

We will have broad discretion over the use of the proceeds of this offering and may not realize a return.

We will have considerable discretion in the application of the net proceeds of this offering. We intend to use the net proceeds to further develop our product candidates and for general corporate purposes. We may use the net proceeds for purposes that do not yield a significant return, if any, for our stockholders.

There is no public market for the warrants to purchase common stock in this offering.

There is no established public trading market for the warrants being offered in this offering, and we do not expect a market to develop. In addition, we do not intend to apply for listing the warrants on any securities exchange. Without an active market, the liquidity of the warrants will be limited.

If the registration statement covering the shares issuable upon exercise of the warrants contained in the units is no longer effective, such shares will be issued with restrictive legends unless such shares are eligible for sale under Rule 144 or another rule under the Securities Act of 1933.

The offering may not be fully subscribed and even if the offering is fully subscribed, we will need additional capital in the future. If additional capital is not available, we may not be able to continue to operate our business as described in this prospectus, and we may have to discontinue our operations entirely.

The placement agent in the offering will offer the units on a “best-efforts” basis, which means that we may raise substantially less than the total maximum offering amount. No refund will be made to investors if less than all of the units are sold. Based on our proposed use of proceeds, we will likely need significant additional financing, which we may seek to raise through, among other sources, public or private equity offerings, debt financings, collaborative arrangements on our product candidates or other sources. However, additional funding may not be available on acceptable terms or at all. Any equity financing will be dilutive to existing stockholders, and any debt financings will likely involve covenants restricting our business activities.

NOTE CONCERNING FORWARD-LOOKING STATEMENTS

This prospectus contains forward-looking statements, within the meaning of Section 27A of the Securities Act of 1933 and Section 21E of the Securities Exchange Act of 1934, that involve risk and uncertainties. Any statements contained in this prospectus that are not statements of historical fact may be forward-looking statements. When we use the words “anticipates,” “plans,” “expects” and similar expressions, we are identifying forward-looking statements. Forward-looking statements involve risks and uncertainties which may cause our actual results, performance or achievements to be materially different from those expressed or implied by forward-looking statements. These factors include, among others:

- current or future financial performance,
- management's plans and objectives for future operations,
- uncertainties associated with product research and development,
- clinical trials and results,
- uncertainties associated with dependence upon the actions of our collaborators and of government regulatory agencies,
- product plans and performance,
- management's assessment of market factors, and
- statements regarding our strategy and plans and those of our strategic partners.

These forward-looking statements involve known and unknown risks, uncertainties and other factors that could cause our actual results to be materially different from our historical results or from any results expressed or implied by forward-looking statements. Our future operating results are subject to risks and uncertainties and are dependent upon many factors, including, without limitation, the risks identified under the caption “Risk Factors,” and in our other Securities and Exchange (SEC) filings. The statements we make in this prospectus are as of the date of this prospectus.

Although we believe that the expectations reflected in the forward-looking statements are reasonable, we cannot guarantee future results, levels of activity, performance or achievements. Except as may be required by law, we do not intend to update any of the forward-looking statements for any reason after the date of this prospectus to conform such statements to actual results or if new information becomes available.

All forward-looking statements attributable to us, or to persons acting on our behalf, are expressly qualified in their entirety by these cautionary statements.

USE OF PROCEEDS

We estimate that the net proceeds from this offering will be approximately \$[*] million, assuming sale of ____ units offered hereby based on an offering price of \$[*] per unit and after deducting the placement agent's fees and estimated offering expenses payable by us. This amount does not include the proceeds which we may receive in connection with the exercise of the warrants. We cannot predict when or if the warrants will be exercised, and it is possible that the warrants may expire and never be exercised. We intend to use the net proceeds of this offering for general corporate purposes, including our clinical trial programs with bremelanotide and PL-3994, our PL-3994 inhaled formulation development program, our development program for new peptides for sexual dysfunction and general working capital. Pending use of the net proceeds, we intend to invest these net proceeds in interest-bearing, investment-grade securities.

Because there is no minimum offering amount required as a condition to consummating this offering, we may sell less than all of the securities offered, which will reduce the amount of proceeds. If we sell less than all of the securities offered, we will prioritize our clinical trial and development programs, and select programs which our management believes can be adequately funded given the amount of proceeds and that provide the best opportunity for return to stockholders, consonant with the program interests and preferences of investors in this offering.

The proceeds from this offering will not be sufficient to complete clinical trials and other studies required for the approval of any product by the FDA, and we will need significant additional funds in the future. See the sections entitled "Risk Factors" and "Management's Discussion and Analysis of Financial Condition and Results of Operation."

DILUTION

Our net tangible book value as of June 30, 2010, was approximately \$9.3 million, or \$0.79 per share of common stock. Net tangible book value per share is calculated by subtracting our total liabilities from our total tangible assets, which is total assets less intangible assets, and dividing this amount by the number of shares of common stock outstanding as of June 30, 2010.

After giving effect to the sale by us of the [*] shares of common stock included in the units offered in this offering, at a public offering price of \$1.[*] per unit, and after deducting the placement agent's fees and estimated offering expenses payable by us, our pro forma net tangible book value as of June 30, 2010, would have been approximately \$[*] million, or \$[*] per share of common stock. This represents an immediate increase in net tangible book value of \$[*] per share to our existing stockholders and an immediate and substantial dilution of \$[*] per share to purchasers of units in this offering, as illustrated in the following table:

Offering price per unit		[*] \$]
Net tangible book value per share	\$0.79	
Increase in net tangible book value per share attributable to new investors	\$[*]	
Net tangible book value per share after this offering		[*] \$]
Dilution per share to new investors		[*] \$]

The foregoing table does not take into account the effect of the exercise of any warrants included within the units in this offering.

The foregoing table further does not take into account further dilution to purchasers of units in this offering that could occur upon the exercise of outstanding options and warrants having a per share exercise price less than the per share offering price to the public in this offering. As of June 30, 2010, there were 11,702,818 shares of common stock outstanding, which does not include:

- 957,374 shares of common stock issuable upon exercise of options outstanding as of June 30, 2010, at a weighted average exercise price of \$13.20 per share;
- 1,585,454 shares of common stock issuable upon exercise of warrants outstanding as of June 30, 2010, at a weighted average exercise price of \$8.36;
- 459,006 shares of common stock reserved for future issuance under our 2005 Stock Plan; and
-

26,865 shares of common stock issuable upon conversion of immediately convertible Series A Convertible Preferred Stock outstanding as of June 30, 2010.

MARKET PRICE OF COMMON STOCK

Our common stock has been listed on NYSE Amex under the symbol “PTN” since December 21, 1999. It previously traded on The Nasdaq SmallCap Market under the symbol “PLTN.” The table below provides, for the fiscal quarters indicated, the reported high and low sales prices for our common stock on the NYSE Amex since July 1, 2008. Prices per share of our common stock have been adjusted for the one-for-ten reverse stock split on September 27, 2010 on a retroactive basis.

FISCAL YEAR ENDED JUNE 30, 2011	HIGH	LOW
Second Quarter (through October 28, 2011)	\$1.90	\$1.28
First Quarter	2.40	1.26

FISCAL YEAR ENDED JUNE 30, 2010	HIGH	LOW
Fourth Quarter	\$3.50	\$1.70
Third Quarter	3.70	2.50
Second Quarter	4.40	2.30
First Quarter	4.80	2.20

FISCAL YEAR ENDED JUNE 30, 2009	HIGH	LOW
Fourth Quarter	\$3.70	\$1.00
Third Quarter	1.40	0.60
Second Quarter	10.50	0.60
First Quarter	3.40	1.10

On October 28, 2010, the closing price as reported on NYSE Amex of our common stock was \$1.37 per share. As of October 28, 2010, we have approximately 220 record holders of our common stock. This number does not include stockholders for whom shares were held in a “nominee” or “street” name.

DIVIDEND POLICY

We have never declared or paid any dividends. We currently intend to retain earnings, if any, for use in our business. We do not anticipate paying dividends in the foreseeable future. Any future determination as to the declaration and payment of dividends, if any, will be at the discretion of our board of directors and will depend on then existing conditions, including our financial condition, operating results, contractual restrictions, capital requirements, business prospects and other factors our board of directors may deem relevant. Our outstanding Series A Preferred Stock, consisting of 4,997 shares on October 28, 2010, provides that we may not pay a dividend or make any distribution to holders of any class of stock unless we first pay a special dividend or distribution of \$100 per share to the holders of the Series A Preferred Stock.

MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION
AND RESULTS OF OPERATIONS

The following discussion and analysis should be read in conjunction with the consolidated financial statements and notes to the consolidated financial statements filed as part of this prospectus.

Critical Accounting Policies.

Our significant accounting policies are described in Note 2 to the consolidated financial statements included in this prospectus. We believe that our accounting policies and estimates relating to revenue recognition, accrued expenses and stock-based compensation charges are the most critical.

Revenue Recognition

Revenue from corporate collaborations and licensing agreements consists of up-front fees, research and development funding and milestone payments. Non-refundable up-front fees are deferred and amortized to revenue on a straight-line basis over the related performance period. We estimate the performance period as the period in which we perform certain development activities under the applicable agreement. Reimbursements for research and development activities are recorded in the period that we perform the related activities under the terms of the applicable agreements. Revenue resulting from the achievement of milestone events stipulated in the applicable agreements is recognized when the milestone is achieved, provided that such milestone is substantive in nature.

The \$10.0 million upfront payment received in January 2007 under the research collaboration and license agreement with AstraZeneca and the additional \$5.0 million received pursuant to the September 2009 amendment has been recognized as revenue over the period ended January 2010, the completion of the research collaboration portion of the agreement.

In 2004, we entered into a collaborative development and marketing agreement with King Pharmaceuticals, Inc. (King) to jointly develop and commercialize bremlanotide, which agreement was terminated effective December 2007. Deferred revenue related to the King agreement had been recognized as revenue over the estimated period of our performance during the initial development term of this agreement. In connection with the termination of the agreement, we recognized as revenue in our fiscal year ended June 30, 2008 all remaining deferred up-front license fees received from King, together with associated deferred costs, in the amounts of \$6.5 million and \$0.8 million, respectively.

Accrued Expenses

Third parties perform a significant portion of our development activities. We review the activities performed under significant contracts each quarter and accrue expenses and the amount of any reimbursement to be received from our collaborators based upon the estimated amount of work completed. Estimating the value or stage of completion of certain services requires judgment based on available information. If we do not identify services performed for us but not billed by the service-provider, or if we underestimate or overestimate the value of services performed as of a given date, reported expenses will be understated or overstated.

Stock-based Compensation

The fair value of stock options granted has been calculated using the Black-Scholes option pricing model, which requires us to make estimates of expected volatility and expected option lives. We estimate these factors at the time of grant based on our own prior experience, public sources of information and information for comparable companies. The amount of recorded compensation related to an option grant is not adjusted for subsequent changes in these estimates or for actual experience. The amount of our recorded compensation is also dependent on our estimates of future option forfeitures and the probability of achievement of performance conditions. If we initially over-estimate future forfeitures, our reported expenses will be understated until such time as we adjust our estimate. Changes in estimated forfeitures will affect our reported expenses in the period of change and future periods.

The amount and timing of compensation expense to be recorded in future periods related to grants of restricted stock units may be affected by employment terminations. As a result, stock-based compensation charges may vary significantly from period to period.

Results of Operations

Year Ended June 30, 2010 Compared to the Year Ended June 30, 2009:

Revenue – For the fiscal year ended June 30, 2010 (fiscal 2010), we recognized \$14.2 million in revenue compared to \$11.4 million for the fiscal year ended June 30, 2009 (fiscal 2009) pursuant to our research collaboration and license agreement with AstraZeneca.

Revenue from AstraZeneca for fiscal 2010 and fiscal 2009 consists of \$3.2 million and \$9.7 million, respectively, of revenue related to our research services performed during those periods, and \$11.0 million and \$1.7 million, respectively, of revenue related to AstraZeneca's up-front license fee. In connection with the completion of the research collaboration portion of the research collaboration and license agreement, we recognized as revenue in fiscal 2010 all remaining deferred up-front license fees received from AstraZeneca. Future contract revenue from AstraZeneca, in the form of reimbursement of development costs, will fluctuate based on development activities in our obesity program. We may also earn contract revenue based on the attainment of development milestones.

Research and Development – Research and development expenses decreased to \$12.3 million for fiscal 2010 compared to \$13.4 million for fiscal 2009. The decrease is the result of the restructuring of our clinical-stage product portfolio and development programs.

Research and development expenses related to our bremelanotide, other melanocortin receptor agonists, PL-3994, obesity and other preclinical programs were \$4.1 million in each of fiscal years 2010 and 2009. Spending to date has been primarily related to the identification and optimization of lead compounds, and secondarily to study the effects of melanocortin receptor-specific compounds on food intake, obesity and other metabolic parameters and preclinical studies and a Phase 1 trial with subcutaneously administered bremelanotide. The amount of such spending and the nature of future development activities are dependent on a number of factors, including primarily the availability of funds to support future development activities, success of our clinical trials and preclinical and discovery programs, and our ability to progress compounds in addition to bremelanotide and PL-3994 into human clinical trials.

The historical amounts of project spending above exclude general research and development spending, which decreased to \$8.2 million for fiscal 2010 compared to \$9.3 million for fiscal 2009. The decrease is primarily related to management's refinement of operations and expense control.

Cumulative spending from inception to June 30, 2010 on our bremelanotide, NeutroSpec (a previously marketed imaging product on which all work is suspended) and other programs (which include PL-3994, other melanocortin receptor agonists, obesity and other discovery programs) amounts to \$133.2 million, \$55.5 million and \$56.8 million, respectively. Due to various risk factors described in this prospectus, including the difficulty in currently estimating the costs and timing of future Phase 1 clinical trials and larger-scale Phase 2 and Phase 3 clinical trials for any product under development, we cannot predict with reasonable certainty when, if ever, a program will advance to the next stage of development or be successfully completed, or when, if ever, related net cash inflows will be generated. See the section entitled "Risk Factors."

General and Administrative – General and administrative expenses decreased to \$4.9 million for fiscal 2010 compared to \$5.3 million for fiscal 2009. The decrease is primarily related to management's refinement of operations and expense control.

Income Tax Benefit – Income tax benefits of \$1.0 million in fiscal 2010 and \$1.7 million in fiscal 2009 relate to the sale of New Jersey state net operating loss carryforwards. The amount of such losses and tax credits that we are able to sell depends on annual pools and allocations established by the state of New Jersey.

Year Ended June 30, 2009 Compared to the Year Ended June 30, 2008:

Revenue – For fiscal 2009, we recognized \$11.4 million in revenue compared to \$11.5 million for the fiscal year ended June 30, 2008 (fiscal 2008). Revenue consisted of the following:

Fiscal 2009	Fiscal 2008	Revenue related to:
\$11.4 million	\$3.0 million	our license agreement with AstraZeneca
-	\$8.2 million	bremelanotide for ED and FSD pursuant to our collaboration agreement with King, which was terminated effective December 2007
-	\$0.3 million	NeutroSpec, pursuant to our collaboration agreement with Mallinckrodt.

Revenue from AstraZeneca for fiscal 2009 and fiscal 2008 consists of \$9.7 million and \$1.3 million, respectively, of revenue related to our research services performed during those periods, and \$1.7 million and \$1.7

million, respectively, of revenue related to AstraZeneca's up-front license fee. As discussed under "Revenue Recognition" above, in fiscal 2008 we recognized remaining deferred up-front license fees and associated deferred costs on termination of our collaboration agreement with King. Contract revenue from Mallinckrodt, with whom we have a strategic collaboration agreement to develop NeutroSpec, primarily reflects Mallinckrodt's share of the costs incurred in NeutroSpec development activities. There were no substantive development activities on NeutroSpec in fiscal 2009 or fiscal 2010, though the agreement with Mallinckrodt has not been terminated.

Research and Development – Research and development expenses decreased to \$13.4 million for fiscal 2009 compared to \$21.2 million for fiscal 2008. The decrease is the result of the restructuring of our clinical-stage product portfolio and development programs and the reduction in workforce initiated in May 2008.

Research and development expenses related to our bremelanotide, other melanocortin receptor agonists, PL-3994, obesity, NeutroSpec and other preclinical programs were \$4.1 million for fiscal 2009 and \$7.1 million for fiscal 2008. Spending to date has been primarily related to the identification and optimization of lead compounds, and secondarily to a study of the effects of melanocortin receptor-specific compounds on food intake, obesity and other metabolic parameters and preclinical studies, a Phase 1 and a Phase 2A trial with PL-3994 and additional preclinical studies and a Phase 1 trial with subcutaneously administered bremelanotide. The amount of such spending and the nature of future development activities are dependent on a number of factors, including primarily the availability of funds to support future development activities, success of our clinical trial, preclinical and discovery programs, and our ability to progress compounds in addition to bremelanotide and PL-3994 into human clinical trials.

The historical amounts of project spending above exclude general research and development spending, which decreased to \$9.3 million for fiscal 2009 compared to \$14.1 million for fiscal 2008. The decrease is primarily related to the reduction in workforce initiated in May 2008.

Cumulative spending from inception to June 30, 2009 on our bremelanotide, NeutroSpec and other programs (which includes PL-3994, PL-6983, obesity, and other discovery programs) amounts to approximately \$126.8 million, \$55.5 million and \$51.0 million, respectively. Due to various risk factors described in this prospectus, including the difficulty in currently estimating the costs and timing of future Phase 1 clinical trials and larger-scale Phase 2 and Phase 3 clinical trials for any product under development, we cannot predict with reasonable certainty when, if ever, a program will advance to the next stage of development or be successfully completed, or when, if ever, related net cash inflows will be generated. See the section entitled "Risk Factors."

General and Administrative – General and administrative expenses decreased to \$5.3 million for fiscal 2009 compared to \$6.9 million for fiscal 2008. The decrease is primarily related to the reduction in workforce initiated in May 2008.

Income Tax Benefit – Income tax benefits of \$1.7 million in fiscal 2009 and \$1.3 million in fiscal 2008 relate to the sale of New Jersey state net operating loss carryforwards. The amount of such losses and tax credits that we are able to sell depends on annual pools and allocations established by the state of New Jersey.

Liquidity and Capital Resources

Since inception, we have incurred net operating losses, primarily related to spending on our research and development programs. We have financed our net operating losses primarily through equity financings and amounts received under collaborative agreements.

Our product candidates are at various stages of development and will require significant further research, development and testing and may never be successfully developed or commercialized. We may experience uncertainties, delays, difficulties and expenses commonly experienced by early stage biopharmaceutical companies, which may include

unanticipated problems and additional costs relating to:

- the development and testing of products in animals and humans;
 - product approval or clearance;
 - regulatory compliance;
 - good manufacturing practices;
 - intellectual property rights;
 - product introduction;

- marketing, sales and competition; and
- obtaining sufficient capital.

Failure to obtain timely regulatory approval for our product candidates and indications would impact our ability to increase revenues and could make it more difficult to attract investment capital for funding our operations. Any of these possibilities could materially and adversely affect our operations and require us to curtail or cease certain programs.

During fiscal 2010, we used \$5.7 million of cash for our operating activities, compared to \$5.4 million used in fiscal 2009. Net cash outflows from operations in fiscal 2010 were favorably impacted by the decrease in research and development expenses and the receipt of \$5.0 million in additional payments from AstraZeneca. Net cash outflows from operations in fiscal 2009 were favorably impacted by the receipt of \$6.6 in additional payments from AstraZeneca. Our periodic accounts receivable balances will continue to be highly dependent on the timing of receipts from collaboration partners and the division of development responsibilities between us and our collaboration partners.

In fiscal 2010, net cash provided by investing activities was \$38,000 consisting mainly of the sale of property compared to \$0.7 million provided by investing activities in fiscal 2009, which consisted mainly of the sale of property and equipment.

For fiscal 2010, net cash provided by financing activities was \$6.7 million, primarily reflecting the aggregate net proceeds of approximately \$7.0 million from the sales in August 2009, February 2010 and June 2010 of 948,484 units, 962,962 units and 1,000,000 units, respectively, in registered direct offerings. Each unit from the August 2009 offering consisted of one share of common stock and a five-year warrant to purchase 0.35 shares of common stock at an exercise price of \$3.30 per share. Each unit from the February 2010 offering consisted of one share of common stock, a Series A warrant exercisable for 0.33 shares of our common stock at an exercise price of \$3.00 per share of common stock and a Series B warrant exercisable for 0.33 shares of common stock at an exercise price of \$2.70 per share of common stock. The Series A warrant is exercisable 181 days from the date of issuance and expires three years thereafter, the Series B warrant was exercisable immediately upon issuance and originally expired 180 days from the date of issuance. Management extended the expiration date of the Series B warrants an additional 180 days. Each unit from the June 2010 offering consisted of one share of common stock and a one-year warrant to purchase 0.14 shares of common stock at an exercise price of \$2.00 per share. During fiscal 2009, net cash used in financing activities was \$0.3 million, consisting entirely of payments on capital lease obligations.

We have incurred cumulative negative cash flows from operations since our inception, and have expended, and expect to continue to expend in the future, substantial funds to complete our planned product development efforts. As of June 30, 2010, our cash and cash equivalents were \$5.4 million and our available-for-sale investments were \$3.5 million.

Our existing cash, cash equivalents and available-for-sale investments are not sufficient to fund our planned operations for the next twelve months. This raises substantial doubt about our ability to continue as a going concern. We have made the strategic decision to focus resources and efforts on clinical trials for bremelanotide and PL-3994 and preclinical development of an inhaled formulation of PL-3994 and a new peptide drug candidate for sexual dysfunction, and have ceased research and development efforts on new product candidates. As part of this decision, we have implemented reductions in staffing levels, and anticipate having no more than twenty employees by December 31, 2010. We also intend to raise additional capital by December 31, 2010. The accompanying consolidated financial statements have been prepared assuming that we continue as a going concern.

We intend to seek additional capital through public or private equity or debt financings, collaborative arrangements on our product candidates, or other sources. However, sufficient additional funding to support projected operations, including clinical trials with either bremelanotide or PL-3994, or both, may not be available on acceptable terms or at all. We may be required to seek collaborators for our product candidates at an earlier stage than otherwise would be desirable and on terms that are less favorable than might otherwise be available, and relinquish, license or otherwise dispose of rights on unfavorable terms to technologies and product candidates that we would otherwise seek to develop or commercialize ourselves. The nature and timing of our development activities are highly dependent on our financing activities.

If we are unable to raise sufficient additional funds to advance at least one of our product candidates, we will implement plans for the orderly wind down of our business operations, including curtailing operations significantly and further decreasing staffing levels, and will seek to license, sell or otherwise dispose of our product candidates, technologies and contractual rights, including rights under our research collaboration and license

agreement with AstraZeneca, on the best possible terms available. Even if we are able to license, sell or otherwise dispose of our product candidates, technologies and contractual rights, it is likely to be on unfavorable terms and for less value than if we had the financial resources to develop or otherwise advance our product candidates, technologies and contractual rights ourselves.

We anticipate incurring additional losses over at least the next few years. To achieve profitability, we, alone or with others, must successfully develop and commercialize our technologies and proposed products, conduct preclinical studies and clinical trials, obtain required regulatory approvals and successfully manufacture and market such technologies and proposed products. The time required to reach profitability is highly uncertain, and we do not know whether we will be able to achieve profitability on a sustained basis, if at all.

Off-Balance Sheet Arrangements

None.

Contractual Obligations

We have entered into various contractual obligations and commercial commitments. The following table summarizes our most significant contractual obligations as of June 30, 2010:

	Total	Payments due by Period			More than 5 Years
		Less than 1 Year	1 - 3 Years	3 - 5 Years	
Facility operating leases	\$ 4,948,401	\$ 2,196,655	\$ 2,290,236	\$ 461,510	\$ -
Capital lease obligations	37,107	22,264	14,843	-	-
License agreements	210,000	15,000	30,000	30,000	135,000
Total contractual obligations	\$ 5,195,508	\$ 2,233,919	\$ 2,335,079	\$ 491,510	\$ 135,000

Our license agreement related to NeutroSpec requires royalty payments on commercial net sales and payments of up to \$2.25 million contingent on the achievement of specified cumulative net margins on sales by Mallinckrodt. No contingent amounts will be payable related to NeutroSpec unless we recommence sales and marketing of NeutroSpec. We do not expect to make any such contingent payments during the next twelve months.

BUSINESS

We are a biopharmaceutical company dedicated to the development of peptide, peptide mimetic and small molecule agonist compounds with a focus on melanocortin and natriuretic peptide receptor systems. We have a pipeline of development programs targeting melanocortin and natriuretic receptors, including development of proposed products for treatment of sexual dysfunction, acute asthma, heart failure, hypertension, obesity, diabetes and metabolic syndrome.

Our Product Candidates

We currently have the following active drug development programs:

- Bremelanotide, a peptide melanocortin receptor agonist, for treatment of sexual dysfunction, targeting female sexual dysfunction (FSD) and erectile dysfunction (ED) in patients non-responsive to current therapies.
 - Peptide melanocortin receptor agonists for treatment of FSD and ED.
- PL-3994, a peptide mimetic natriuretic peptide receptor A (NPR-A) agonist, for treatment of acute exacerbations of asthma, heart failure and refractory or difficult-to-control hypertension.

We have licensed several families of melanocortin receptor-based compounds for treatment of obesity, diabetes and related metabolic syndrome to AstraZeneca AB (AstraZeneca) pursuant to our research collaboration and license agreement with AstraZeneca.

Melanocortin Receptor-Specific Programs

The melanocortin system is involved in a large and diverse number of physiologic functions, and therapeutic agents modulating this system may have the potential to treat a variety of conditions and diseases, including sexual dysfunction, obesity and related disorders, cachexia (wasting syndrome) and inflammation-related diseases.

Bremelanotide for Sexual Dysfunction. We are developing subcutaneously administered bremelanotide for the treatment of FSD and ED in patients non-responsive to current therapies. Bremelanotide, which is a melanocortin agonist (a compound which binds to a cell receptor and triggers a response) drug candidate, is a synthetic peptide analog of the naturally occurring hormone alpha-MSH (melanocyte-stimulating hormone).

Medical Need - FSD. FSD is a multifactorial condition that has anatomical, physiological, medical, psychological and social components. FSD includes four disorders, hypoactive sexual desire disorder, female sexual arousal disorder, sexual pain disorder and orgasmic disorder. To establish a diagnosis of FSD, these syndromes must be associated with personal distress, as determined by the affected women. Approximately 40 million American women are affected by FSD. The National Health and Social Life Survey, a probability sample study of sexual behavior in a demographically representative cohort of United States adults ages 18 to 59, found that approximately 43% of women suffer from some form of FSD.

There are no drugs in the United States approved for FSD indications.

Medical Need - ED. ED is the consistent inability to attain and maintain an erection sufficient for sexual intercourse. The condition is correlated with increasing age, cardiovascular disease, hypertension, diabetes,

hyperlipidemia and smoking. In addition, certain prescription drugs and psychogenic issues may contribute to ED. According to the Massachusetts Male Aging Study, more than 50% of men aged 40-70 report episodes of ED and more than 30 million men in the United States may be afflicted with some form of ED, with less than 20% seeking treatment. The incidence of ED increases with age. Studies show that chronic ED affects about 5% of men in their 40s and 15% to 25% of men by the age of 65. The current market size for ED is more than \$4 billion per year.

PDE-5 inhibitors such as sildenafil (Viagra®), vardenafil (Levitra®) and tadalafil (Cialis®) are used to treat ED, but an estimated 35% of ED patients are non-responsive to PDE-5 inhibitor therapy. There are limited therapeutic options for ED patients non-responsive or inadequately responsive to PDE-5 inhibitor therapy, including alprostadil for direct penis injection or urethral suppositories, surgical penile implants and various devices.

Mechanisms of Action with Bremelanotide. Bremelanotide is believed to act through activation of melanocortin receptors in the central nervous system, which is a different mechanism of action from currently marketed PDE-5 inhibitor ED therapies that act directly on the vascular system. Studies have demonstrated efficacy with bremelanotide in ED patients non-responsive to PDE-5 inhibitor therapies. Studies have also demonstrated an additive effect in ED patients co-administered both bremelanotide and a PDE-5 inhibitor.

Clinical Trials with Intranasal Formulations. We extensively studied bremelanotide for sexual dysfunction in nasal formulations, administered as a single spray in one nostril. Increases in blood pressure were observed in some patients receiving nasally administered bremelanotide, and this observed increase was a significant factor leading us to discontinue work on nasally administered bremelanotide as a first-line therapy for sexual dysfunction. We believe that the amount of increase in blood pressure, as well as the rate of nausea and emesis (vomiting), was due, at least partially, to high doses resulting from variability in drug uptake with nasal administration. Studies showed significant variation in plasma levels of bremelanotide in patients receiving nasally administered bremelanotide.

While we are no longer developing intranasal formulations of bremelanotide for commercialization, trials with intranasal formulations of bremelanotide did demonstrate potential utility of bremelanotide. Phase 2B double blind, placebo-controlled, parallel doses clinical trials evaluating nasal bremelanotide for ED, conducted in 726 non-diabetic and 294 diabetic patients, showed that over 30% of ED patients were restored to a normal level of function. Phase 2A clinical trials of post-menopausal FSD patients showed a statistically significant increase in the level of sexual desire and genital arousal in subjects receiving nasal bremelanotide compared to subjects receiving placebo and, in pre-menopausal FSD patients, a trend to increases in the level of sexual desire and genital arousal in subjects receiving nasal bremelanotide compared to subjects receiving placebo. In trials conducted to date, almost 2,000 patients received at least one dose of bremelanotide, with about 1,500 receiving multiple doses.

Subcutaneous Administration of Bremelanotide. In a Phase 1 clinical trial designed to evaluate the blood pressure effects of subcutaneously administered bremelanotide, no statistically significant difference in mean changes in blood pressure was seen in subjects receiving bremelanotide compared to placebo. No subject discontinued participation in the trial as a result of protocol stopping rules based on blood pressure changes. In addition, there was no difference in the incidence of emesis in subjects receiving bremelanotide compared to placebo. This Phase 1 trial was a two-week, randomized, double-blind, placebo-controlled study in subjects who received 45 repeat doses of bremelanotide or placebo subcutaneously. Each administered dose of bremelanotide achieved plasma levels shown to be efficacious for improving erectile function in multiple previous Phase 1 and Phase 2 erectile dysfunction studies. With subcutaneous administration of bremelanotide variability in plasma exposure was significantly decreased.

We have completed a placebo-controlled, randomized, double-blind, cross over safety study evaluating blood pressure effects of subcutaneous bremelanotide in healthy male volunteers between 45 and 65 years old. The study also evaluated dose-to-dose consistency of plasma exposure of bremelanotide. A total of 49 subjects were dosed in the safety study; 19 of the subjects were enrolled in a sub-study and completed a graded exercise treadmill test as a

surrogate for the cardiovascular effects of sexual activity. The results demonstrate that with subcutaneous administration consistent therapeutic blood plasma levels can be obtained without sustained clinically significant blood pressure effects.

Next Clinical Trial Steps. We are submitting protocols and a meeting request to the FDA for initiation of an at-home Phase 2 clinical trial of subcutaneously administeredbremelanotide for women with FSD, and anticipate that the meeting will be held late early in the first quarter of calendar 2011. Assuming concurrence of the FDA, and depending on financial resources, this Phase 2 at home clinical trial for women with FSD could start as early as the first half of calendar 2011. In the fourth quarter of calendar 2010 we intend to submit protocols to the FDA for initiation of an in-clinic Phase 2 clinical trial of subcutaneously administeredbremelanotide, as either monotherapy

or a combination therapy with a PDE-5 inhibitor such as sildenafil, for men with ED who are non-responsive or inadequately responsive to PDE-5 inhibitor therapies alone. Assuming concurrence of the FDA, and depending on financial resources, this Phase 2 clinical trial for men with ED could start as early as the first quarter of calendar 2011.

Delivery of Bremelanotide. Injection sites for subcutaneous injection of bremelanotide include the abdomen, thigh and upper arms. We are exploring various delivery devices for subcutaneous administration. We believe that fine needle devices, pen injectors and needle-free injector systems can be used for subcutaneous administration of bremelanotide, and are evaluating various delivery devices for potential commercialization. If Phase 2 clinical trials for ED or FSD are successful, we anticipate that Phase 3 clinical trials will be conducted with a delivery device intended for commercialization.

Peptide and Small Molecule Melanocortin Receptor Agonists for Treatment of Sexual Dysfunction. We developed a series of lead alternative melanocortin receptor-specific peptides for treatment of sexual dysfunction, and have demonstrated efficacy with certain of these peptides in inducing erections in animal models.

In developing these peptides, we used a novel screening platform that examined the effectiveness of peptides in animal models of sexual response and also determined cardiovascular effects, primarily looking at changes in blood pressure. In these animal models, certain of these peptides resulted in significantly smaller increases in blood pressure at doses effective for a sexual response than increases in blood pressure in the same models seen with comparably effective doses of bremelanotide. Additionally, many of these peptides are highly selective for the specific melanocortin receptor believed to be involved in sexual response, and thus may have an improved side effect and safety profile.

We have suspended further discovery work on our alternative melanocortin receptor-specific peptides, but intend, depending on financial resources, to advance one or more of the peptides we have developed to preclinical toxicology and other studies required by the FDA prior to initiating human clinical trials.

We have suspended our development program for small molecule melanocortin receptor-specific compounds for treatment of sexual dysfunction.

Obesity. In 2007, we entered into an exclusive research collaboration and license agreement with AstraZeneca to discover, develop and commercialize compounds that target melanocortin receptors for the treatment of obesity, diabetes and related metabolic syndrome. In June and December 2008 and in September 2009, the research collaboration and license agreement was amended to include additional compounds and associated intellectual property we developed and to modify royalty rates and milestone payments. Active work under the collaboration portion of the agreement concluded in January 2010, but we are still providing certain clinical trial related and other services to AstraZeneca.

Obesity is a multifactorial condition with significant biochemical components relating to satiety (feeling full), energy utilization and homeostasis. A number of different metabolic and hormonal pathways are being evaluated by companies around the world in efforts to develop better treatments for obesity. Scientific research has established that melanocortin receptors have a role in eating behavior and energy homeostasis, and that some melanocortin receptor agonists decrease food intake and induce weight loss.

Obesity is a significant healthcare issue, often correlated with a variety of cardiovascular and other diseases, including diabetes. More than 1.1 billion adults and over 150 million children worldwide are overweight, with over 300 million adults categorized as obese. According to the American Obesity Association, obesity is the second leading cause of preventable death after smoking and nearly one-third of adults in the United States are obese. Increased mortality, high blood pressure, diabetes and other substantial health risks are associated with being overweight and obese. Over

2.6 million deaths are attributed to diabetes each year worldwide and almost \$120 billion is spent on related costs of obesity, according to the U.S. Surgeon General.

We developed classes of small molecule and peptide compounds targeting melanocortin receptors which are effective in the treatment of obesity in animal models. Certain of these compounds have been demonstrated to be effective in normal diet-induced obese and genetically obese animal models for decreasing food intake and body weight, without an increase in sexual response in normal animals at the same or higher dose levels. Pursuant to clinical trial agreements with AstraZeneca, we have conducted proof-of-principle clinical trials on the effects of a melanocortin receptor-specific compound on food intake, obesity and other metabolic parameters, and have agreed to conduct additional related studies at a negotiated rate.

Pursuant to the terms of the research collaboration and license agreement with AstraZeneca, we have received up-front and other licensing payments totaling \$15 million from AstraZeneca. We are eligible for milestone

payments totaling up to \$145 million, with up to \$85 million contingent upon development and regulatory milestones and the balance on achievement of sales targets, plus royalties on sales of approved products. AstraZeneca has responsibility for product commercialization, product discovery and development costs.

Other Melanocortin Programs. We have suspended work on our other early stage research and discovery programs exploring additional indications and targets. These programs include development of highly selective melanocortin-1 and melanocortin-3 receptor agonists for treatment of inflammation-related diseases and disorders and melanocortin-4 receptor antagonists for treatment of cachexia. We do not anticipate that any significant effort will be devoted to these programs during the next twelve months.

Natriuretic Peptide Receptor-Specific Programs

The natriuretic peptide receptor system has numerous cardiovascular functions, and therapeutic agents modulating this system may be useful in treatment of heart failure, hypertension, acute asthma and other cardiovascular diseases.

PL-3994. PL-3994 is an NPR-A agonist compound in development for treatment of acute exacerbations of asthma, heart failure and refractory hypertension. PL-3994 activates NPR-A, a receptor known to play a role in cardiovascular homeostasis. PL-3994 increases plasma cyclic guanosine monophosphate (cGMP) levels, a pharmacological response consistent with the effects of endogenous (naturally produced) natriuretic peptides on cardiovascular function and smooth muscle relaxation. PL-3994 also decreases activity of the renin-angiotensin-aldosterone system (RAAS), a hormone system that regulates blood pressure and fluid balance. The RAAS system is frequently over-activated in heart failure patients, leading to worsening of cardiovascular function.

PL-3994 is one of a number of natriuretic peptide receptor agonist compounds we have developed. PL-3994 is a synthetic molecule incorporating a novel and proprietary amino acid mimetic structure. It has an extended half-life, with reduced affinity for the endogenous natriuretic peptide clearance receptor and significantly increased resistance to neutral endopeptidase, an endogenous enzyme that degrades natriuretic peptides.

PL-3994 for Acute Exacerbations of Asthma. Acute exacerbations of asthma, also called acute severe asthma, is an ongoing asthma episode in which asthma symptoms do not adequately respond to initial bronchodilator or corticosteroid therapy. Inhaled beta-2 adrenergic receptor agonists, such as albuterol, and inhaled corticosteroids are primary treatments for asthma episodes. Some patients with acute exacerbations of asthma become unresponsive to beta-2 adrenergic receptor agonists, significantly limiting treatment options and increasing risk.

In 2006, the most recent year reported, there were almost 1.7 million emergency room visits due to asthma, with 440,000 hospitalizations attributed to asthma. In 2008, approximately 23.3 million Americans had asthma, with a projected 2010 economic cost in the United States of \$20.7 billion, of which the largest single direct medical expenditure, \$5.9 billion, is for prescription drugs.

Existing therapies for acute exacerbations of asthma in patients unresponsive to beta-2 adrenergic receptor agonists have limitations, including typically taking several hours for significant patient improvement. Existing therapies include oxygen, systemic steroids and anticholinergic drugs. PL-3994, which works through a different pathway than beta-2 adrenergic receptor agonists and other approved bronchodilators, is intended to address this unmet medical need.

Research over the past two decades has demonstrated potent bronchodilator effects with both systemic and inhalation administration of natriuretic peptides. NPR-A agonism is known to relax smooth muscles in airways and works through a pathway independent of the beta-2 adrenergic receptor. Preclinical testing demonstrated potent airway smooth muscle relaxation in rat, guinea pig and human tissues using PL-3994, and animal studies in sensitized guinea

pigs has demonstrated a bronchodilator effect with PL-3994 using both subcutaneous and inhalation administration.

Endogenous natriuretic peptides have a very short half-life, due primarily to degradation by neutral endopeptidase and clearance through the natriuretic peptide clearance receptor. PL-3994 is resistant to neutral endopeptidase and clears from the body much more slowly than endogenous natriuretic peptides. PL-3994 has a blood-plasma half-life of at least three hours in humans when administered by subcutaneous injection, with biological effects seen for over eight hours post-administration.

We have planned a proof-of-concept human trial for asthma using a subcutaneously administered formulation of PL-3994, and will submit an IND application to the FDA in the fourth quarter of calendar 2010 for this trial. We also have an inhalation formulation of PL-3994 under development. Depending on financial resources,

either or both the proof-of-concept human trial and preclinical inhalation toxicity studies could start as early as the first quarter of calendar 2011.

PL-3994 for Heart Failure. Heart failure is an illness in which the heart is unable to pump blood efficiently, and includes acutely decompensated heart failure with dyspnea (shortness of breath) at rest or with minimal activity. Endogenous natriuretic peptides have a number of beneficial effects, including vasodilation (relaxation of blood vessels), natriuresis (excretion of sodium), and diuresis (excretion of fluids).

Patients who have been admitted to the hospital with an episode of worsening heart failure have an increased risk of either death or hospital readmission in the three months following discharge. Up to 15% of patients die in this period and as many as 30% need to be readmitted to the hospital. We believe that decreasing mortality and hospital readmission in patients discharged following hospitalization for worsening heart failure is a large unmet medical need for which PL-3994 may be effective. PL-3994 would be utilized as an adjunct to existing heart failure medications, and may, if successfully developed, be self-administered by patients as a subcutaneous injection following hospital discharge. We believe that PL-3994, through activation of NPR-A, may, if successful, reduce cardiac hypertrophy (increase in heart size due to disease), which is an independent risk factor for cardiovascular morbidity and mortality.

Over 5.7 million Americans suffer from heart failure, with 670,000 new cases of heart failure diagnosed each year, with disease incidence expected to increase with the aging of the American population. Despite the treatment of heart failure with multiple drugs, almost all heart failure patients will experience at least one episode of acute heart failure that requires treatment with intravenous medications in the hospital. Heart failure has tremendous human and financial costs. Estimated direct costs in the United States for heart failure are \$37.2 billion in 2009, with heart failure constituting the leading cause of hospitalization in people over 65 years of age, with over 1.1 million hospital discharges for heart failure in 2006. Heart failure is also a high mortality disease, with approximately one-half of heart failure patients dying within five years of initial diagnosis.

We have planned a repeat dose Phase 2 clinical trial in patients hospitalized with heart failure, which will evaluate safety profiles in patients given repeat doses of PL-3994 as well as pharmacokinetic (period to metabolize or excrete the drug) and pharmacodynamic (period of action or effect of the drug) endpoints, but have not determined when this trial will commence.

PL-3994 for Refractory Hypertension. PL-3994 may potentially also be used for treatment of refractory or difficult-to-control hypertension, which is high blood pressure despite a three-drug regimen that includes a diuretic. Refractory hypertension is commonly found in patients with congestive heart failure or renal disease. While there are a large number of approved drugs for treatment of hypertension, there are no approved drugs for hypertension that are active through the NPR-A system. Refractory and other difficult-to-control hypertension can be caused by increased aldosterone levels. PL-3994 is believed to act through the NPR-A system on the RAAS to decrease renin and aldosterone secretion and thereby decrease blood pressure. In a Phase 2A study of subjects with controlled hypertension, the data suggested an increased effect of PL-3994 in reducing systemic blood pressure when taken with an angiotensin-converting enzyme (ACE) inhibitor, a common class of drugs for controlling hypertension. PL-3994 thus may be suitable for use as an adjunct therapy to one or more existing hypertension drugs, including an ACE inhibitor.

Clinical Studies with PL-3994. Preclinical studies in animals established a dose-dependent effect on blood pressure and diuresis, and in animal models of heart failure showed improved kidney function and prevention of cardiac hypertrophy. Human clinical studies of PL-3994 commenced with a Phase 1 trial which concluded in the first quarter of calendar year 2008. This was a randomized, double-blind, placebo-controlled, study in 26 healthy volunteers who received either PL-3994 or a placebo subcutaneously. The evaluations included safety, tolerability, pharmacokinetics and several pharmacodynamic endpoints, including levels of cGMP, a natural messenger nucleotide. Dosing

concluded with the successful achievement of the primary endpoint of the study, a prespecified reduction in systemic blood pressure. No volunteer experienced a serious or severe adverse event. Elevations in plasma cGMP levels, increased diuresis and increased natriuresis were all observed for several hours after single subcutaneous doses.

In the second quarter of calendar year 2008, we conducted a Phase 2A trial in volunteers with controlled hypertension who were receiving one or more conventional antihypertensive medications. In this trial, which was a randomized, double-blind, placebo-controlled, single ascending dose study in 21 volunteers, the objective was to demonstrate that PL-3994 can be given safely to patients taking antihypertensive medications commonly used in heart failure and hypertension patients. Dosing concluded with the successful achievement of the primary endpoint

of the study, a prespecified reduction in systemic blood pressure. No volunteer experienced a serious or severe adverse event. Elevations in plasma cGMP levels were observed for several hours after single subcutaneous doses.

Administration of PL-3994. We are developing PL-3994 for acute exacerbations of asthma indications as either a subcutaneously administered drug or as an inhaled drug. For asthma indications we believe that inhalation administration may be preferable to subcutaneous or other systemic administration.

We are developing PL-3994 for heart failure and refractory hypertension indications as a subcutaneously administered drug. PL-3994 is well absorbed through this route of administration. In human studies, the pharmacokinetic and pharmacodynamic half-lives were on the order of hours, significantly longer than the comparable half-lives of endogenous natriuretic peptides. We believe that subcutaneous PL-3994, if successful, will be amenable to self-administration by patients, similar to insulin and other self-administered drugs.

Other Natriuretic Peptide Receptor-Specific Programs. We have suspended work on our early stage discovery and development programs in the natriuretic peptide receptor field. We do not anticipate that any significant effort will be devoted to these programs during the next twelve months.

Other Programs

We previously marketed NeutroSpec®, a radiolabeled monoclonal antibody product for imaging and diagnosing infection, which is the subject of a strategic collaboration agreement with the Mallinckrodt division of Covidien Ltd. We have suspended marketing, clinical trials and securing regulatory approvals of NeutroSpec, and do not anticipate conducting any substantive work or incurring substantial expenditures on NeutroSpec over the next twelve months.

Technologies We Use

We used a rational drug design approach to discover and develop proprietary peptide, peptide mimetic and small molecule agonist compounds, focusing on melanocortin and natriuretic peptide receptor systems. Computer-aided drug design models of receptors are optimized based on experimental results obtained with peptides and small molecules we develop, supported by conformational analyses of peptides in solution utilizing nuclear magnetic resonance spectroscopy. By integrating both technologies, we believe we are developing an advanced understanding of the factors which drive agonism.

We have developed a series of proprietary technologies used in our drug development programs. One technology employs novel amino acid mimetics in place of selected amino acids. These mimetics provide the receptor-binding functions of conventional amino acids, while providing structural, functional and physiochemical advantages. The amino acid mimetic technology is employed in PL-3994, our compound in development for treatment of acute exacerbations of asthma, heart failure and refractory hypertension.

Some compound series have been derived using our proprietary and patented platform technology, called MIDAS™ (Metal Ion-induced Distinctive Array of Structures). This technology employs metal ions to fix the three-dimensional configuration of peptides, forming conformationally rigid molecules that remain folded specifically in their active state. These MIDAS molecules are generally simple to synthesize, are chemically and proteolytically stable, and have the potential to be orally bioavailable. In addition, MIDAS molecules are information-rich and provide data on structure-activity relationships that may be used to design small molecule, non-peptide drugs.

Estimate of Amount Spent on Research and Development Activities

Research and development expenses were \$12.3 million for the fiscal year ended June 30, 2010 (fiscal 2010) and \$13.4 million for the fiscal year ended June 30, 2009 (fiscal 2009), of which \$3.2 million and \$4.7 million of our research and development expenses for fiscal 2010 and fiscal 2009, respectively, were borne by AstraZeneca pursuant to the research collaboration and license agreement.

Competition

General. Our products under development will compete on the basis of quality, performance, cost effectiveness and application suitability with numerous established products and technologies. We have many competitors, including pharmaceutical, biopharmaceutical and biotechnology companies. Furthermore, there are several well-established products in our target markets that we will have to compete against. Products using new technologies which may be competitive with our proposed products may also be introduced by others. Most of the companies selling or developing competitive products have financial, technological, manufacturing and distribution resources significantly greater than ours and may represent significant competition for us.

The pharmaceutical and biotechnology industries are characterized by extensive research efforts and rapid technological change. Many biopharmaceutical companies have developed or are working to develop products similar to ours or that address the same markets. Such companies may succeed in developing technologies and products that are more effective or less costly than any of those that we may develop. Such companies may be more successful than us in developing, manufacturing and marketing products.

We cannot guarantee that we will be able to compete successfully in the future or that developments by others will not render our proposed products under development or any future product candidates obsolete or non-competitive or that our collaborators or customers will not choose to use competing technologies or products.

Bremelanotide and Other Melanocortin Receptor Agonists for Treatment of Sexual Dysfunction. There is competition and financial incentive to develop, market and sell drugs for the treatment of ED and FSD. Leading drugs approved for ED indications are PDE-5 inhibitors which target the vascular system, such as sildenafil (sold under the trade name Viagra®), vardenafil (sold under the trade name Levitra®) and tadalafil (sold under the trade name Cialis®). In addition, we are aware of other PDE-5 inhibitors under development. Other drugs approved for ED indications include alprostadil for injection (sold under the trade name Caverject Impulse® among others), which is injected directly into the penis, and alprostadil in urethral suppository format (sold under the trade name MUSE®). In addition, a variety of devices, including vacuum devices and surgical penile implants, have been approved for ED indications. We are aware of a number of companies developing new drugs for ED indications, including at least one company developing a new drug for treatment of ED not sufficiently responsive to PDE-5 inhibitors, some of which are in clinical trials in the United States and elsewhere. We are not aware of any company actively developing a melanocortin receptor agonist drug for ED.

There are no products specifically approved for an FSD indication in the United States. A number of hormonal therapies have been commercialized for other indications, including progestin, androgen and localized estrogen therapies, but none have been approved by the FDA for FSD indications. A number of drugs, including hormonal drugs, are in various stages of research or development for FSD. We are not aware of any company actively developing a melanocortin receptor agonist drug for FSD.

PL-3994 for Acute Exacerbations of Asthma Indications. The asthma market is intensively competitive, with substantial competition and financial incentive to develop, market and sell drugs for treatment of asthma, with projected costs of prescription drugs of \$5.9 billion in the United States in 2010. We are aware of companies developing drugs for the specific indications of either acute exacerbations of asthma or acute severe asthma, including at least one company with a drug reported to be currently in clinical trials. In addition, a number of clinical trials are conducted by hospitals, research institutes and others exploring various methods and combinations of drugs to treat acute exacerbations of asthma. There are a number of drugs and therapies currently used to treat acute exacerbations of asthma, including administration of oral or intravenous systemic steroids, use of oxygen or heliox, a mixture of helium and oxygen, nebulized short-acting beta-2 adrenergic receptor agonists, intravenous or nebulized anticholinergic agents and, for patients in or approaching respiratory arrest, intubation and mechanical ventilation. However, each of these drugs or therapies has recognized limitations or liabilities, and we believe that there remains an unmet medical need for a safe and effective treatment for acute exacerbations of asthma. We are not aware of any company actively developing a drug to relax smooth muscles in airways through a natriuretic peptide receptor pathway.

PL-3994 for Heart Failure Indications. Nesiritide (sold under the trade name Natrecor®), a recombinant human B-type natriuretic peptide drug, is marketed in the United States by Scios Inc., a Johnson & Johnson company. Nesiritide is approved for treatment of acutely decompensated congestive heart failure patients who have dyspnea at rest or with minimal activity. Carperitide, a recombinant human atrial natriuretic peptide drug, is marketed in Japan and is reported to be available for licensing in other countries. Ularitide, a synthetic form of urodilatin, a naturally occurring

human natriuretic peptide related to atrial natriuretic peptide, is reported to be in clinical trials. Nesiritide, carperitide and ularitide are administered by intravenous infusion. Because of the very short half-lives of nesiritide, carperitide and ularitide, we believe these drugs are unlikely to be suitable for subcutaneous administration or for long-term treatment of heart failure. We are aware of other companies developing intravenously administered natriuretic peptide drugs, with at least one reported to be in Phase 2 clinical trials for acute heart failure. In addition, there are a number of approved drugs and drugs in development for treatment of heart failure through mechanisms or pathways other than agonism of NPR-A.

Obesity. There are several FDA-approved drugs for the treatment of obesity, and a large number of products in clinical development by other companies, including products which target melanocortin receptors. Clinical trials for obesity are lengthy, time-consuming and expensive, and we may not be able to proceed if AstraZeneca discontinues work under or terminates our research collaboration and license agreement. See the

discussion under the heading “We do not control the development of compounds licensed to third parties and, as a result, we may not realize a significant portion of the potential value of any such license arrangements” in “Risk Factors” in this prospectus.

Patents and Proprietary Information

Patent Protection. Our success will depend in substantial part on our ability to obtain, defend and enforce patents, maintain trade secrets and operate without infringing upon the proprietary rights of others, both in the United States and abroad. We own a number of issued United States patents and have pending United States patent applications, many with issued or pending counterpart patents in selected foreign countries. We seek patent protection for our technologies and products in the United States and those foreign countries where we believe patent protection is commercially important.

We own issued United States and foreign patents claiming the bremelanotide substance. The issued United States patents have a term until 2020, which term may be subject to extension for a maximum period of up to five years as compensation for patent term lost during drug development and the FDA regulatory review process, pursuant to the Drug Price Competition and Patent Term Restoration Act of 1984 (the Hatch-Waxman Amendments). Whether we will be able to obtain patent term extensions under the Hatch-Waxman Amendments and the length of the extension to which we may be entitled cannot be determined until the FDA approves for marketing, if ever, a product in which bremelanotide is the active ingredient. In addition, the claims of issued patents covering bremelanotide may not provide meaningful protection. Further, third parties may challenge the validity or scope of any issued patent.

We have patent applications pending in the United States and other countries claiming the PL-3994 substance and other natriuretic peptide receptor agonist compounds we have developed. One United States patent claiming PL-3994 has been issued, but other patent applications have not yet issued, and in any event we do not know the full scope of patent coverage we will obtain, or whether any patents will issue other than the United States patent claiming PL-3994. The issued patent has a term until 2027, which term may be subject to extension for a maximum period of up to five years as compensation for patent term lost during drug development and the FDA regulatory review process, pursuant to the Hatch-Waxman Amendments. Whether we will be able to obtain patent term extensions under the Hatch-Waxman Amendments and the length of the extension to which we may be entitled cannot be determined until the FDA approves for marketing, if ever, a product in which PL-3994 is the active ingredient.

We have filed patent applications on melanocortin receptor specific peptides and small molecules we are developing, but these applications have not yet been examined. Until these applications are examined, we do not know the scope of patent claims that will be allowed, or whether any patents will issue.

We own a number of United States and foreign patent applications that are licensed to AstraZeneca under our research collaboration and license agreement relating to our obesity program. Under the agreement, AstraZeneca is responsible for prosecution of these patent applications in the United States and other countries. However, many of these patent applications have not yet been examined, and we do not know the scope of patent claims that will be allowed, or whether any patents will issue. Additionally, until one or more compounds subject to the agreement with AstraZeneca are developed for commercialization, which may never occur, we cannot evaluate the duration of patents or their effect on the program.

In the event that a third party has also filed a patent application relating to an invention we claimed in a patent application, we may be required to participate in an interference proceeding adjudicated by the United States Patent and Trademark Office to determine priority of invention. The possibility of an interference proceeding could result in substantial uncertainties and cost, even if the eventual outcome is favorable to us. An adverse outcome could result in the loss of patent protection for the subject of the interference, subjecting us to significant liabilities to third parties,

the need to obtain licenses from third parties at undetermined cost, or requiring us to cease using the technology.

Future Patent Infringement. We do not know for certain that our commercial activities will not infringe upon patents or patent applications of third parties, some of which may not even have been issued. Although we are not aware of any valid United States patents which are infringed by bremelanotide or PL-3994, we cannot exclude the possibility that such patents might exist or arise in the future. We may be unable to avoid infringement of any such patents and may have to seek a license, defend an infringement action, or challenge the validity of such patents in court. Patent litigation is costly and time consuming. If such patents are valid and we do not obtain a license under any such patents, or we are found liable for infringement, we may be liable for significant monetary damages, may

encounter significant delays in bringing products to market, or may be precluded from participating in the manufacture, use or sale of products or methods of treatment covered by such patents.

Proprietary Information. We rely on proprietary information, such as trade secrets and know-how, which is not patented. We have taken steps to protect our unpatented trade secrets and know-how, in part through the use of confidentiality and intellectual property agreements with our employees, consultants and certain contractors. If our employees, scientific consultants, collaborators or licensees develop inventions or processes independently that may be applicable to our product candidates, disputes may arise about the ownership of proprietary rights to those inventions and processes. Such inventions and processes will not necessarily become our property, but may remain the property of those persons or their employers. Protracted and costly litigation could be necessary to enforce and determine the scope of our proprietary rights.

If trade secrets are breached, our recourse will be solely against the person who caused the secrecy breach. This might not be an adequate remedy to us, because third parties other than the person who causes the breach will be free to use the information without accountability to us. This is an inherent limitation of the law of trade secret protection.

Governmental Regulation

The FDA, comparable agencies in other countries and state regulatory authorities have established regulations and guidelines which apply to, among other things, the clinical testing, manufacturing, safety, efficacy, labeling, storage, record keeping, advertising, promotion, marketing and distribution of our proposed products. Noncompliance with applicable requirements can result in fines, recalls or seizures of products, total or partial suspension of production, refusal of the regulatory authorities to approve marketing applications, withdrawal of approvals and criminal prosecution.

Before a drug product is approved by the FDA for commercial marketing, three phases of human clinical trials are usually conducted to test the safety and effectiveness of the product. Phase 1 clinical trials most typically involve testing the drug on a small number of healthy volunteers to assess the safety profile of the drug at different dosage levels. Phase 2 clinical trials, which may also enroll a relatively small number of patient volunteers, are designed to further evaluate the drug's safety profile and to provide preliminary data as to the drug's effectiveness in humans. Phase 3 clinical trials consist of larger, well-controlled studies that may involve several hundred or thousand patient volunteers representing the drug's targeted population. During any of these phases, the clinical trial can be placed on clinical hold, or temporarily or permanently stopped for a variety of reasons, principally for safety concerns.

After approving a product for marketing, the FDA may require post-marketing testing, including extensive Phase 4 studies, and surveillance to monitor the safety and effectiveness of the product in general use. The FDA may withdraw product approvals if compliance with regulatory standards is not maintained or if problems occur following initial marketing. In addition, the FDA may impose restrictions on the use of a drug that may limit its marketing potential. The failure to comply with applicable regulatory requirements in the United States and in other countries in which we conduct development activities could result in a variety of fines and sanctions, such as warning letters, product recalls, product seizures, suspension of operations, fines and civil penalties or criminal prosecution.

In addition to obtaining approval of an NDA from the FDA for any of our proposed products, any facility that manufactures such a product must comply with GMPs. This means, among other things, that the drug manufacturing establishment must be registered with, and subject to inspection by, the FDA. Foreign manufacturing establishments must also comply with GMPs and are subject to periodic inspection by the FDA or by corresponding regulatory agencies in such other countries under reciprocal agreements with the FDA. In complying with standards established by the FDA, manufacturing establishments must continue to expend time, money and effort in the areas of production and quality control to ensure full technical compliance. We will use contract manufacturing establishments, in the

United States or in foreign countries, to manufacture our proposed products, and will depend on those establishments to comply with GMPs and other regulatory requirements.

Third-Party Reimbursements

Successful sales of our proposed products in the United States and other countries will depend, in large part, on the availability of adequate reimbursement from third-party payors such as governmental entities, managed care organizations, HMOs and private insurance plans. Reimbursement by a third-party payor may depend on a number of factors, including the payor's determination that the product has been approved by the FDA for the indication for which the claim is being made, that it is neither experimental nor investigational, and that the use of

the product is safe and efficacious, medically necessary, appropriate for the specific patient and cost effective. Since reimbursement by one payor does not guarantee reimbursement by another, we or our licensees may be required to seek approval from each payor individually. Seeking such approvals is a time-consuming and costly process. Third-party payors routinely limit the products that they will cover and the amount of money that they will pay and, in many instances, are exerting significant pressure on medical suppliers to lower their prices. There is significant uncertainty concerning third-party reimbursement for the use of any pharmaceutical product incorporating new technology and we are not sure whether third-party reimbursement will be available for our proposed products once approved, or that the reimbursement, if obtained, will be adequate. There is also significant uncertainty concerning third-party reimbursement for products treating FSD and ED. Less than full reimbursement by governmental and other third-party payors for our proposed products would adversely affect the market acceptance of these proposed products. Further, healthcare reimbursement systems vary from country to country, and we are not sure whether third-party reimbursement will be made available for our proposed products under any other reimbursement system.

Manufacturing and Marketing

To be successful, our proposed products will need to be manufactured in commercial quantities under GMPs prescribed by the FDA and at acceptable costs. We do not have the facilities to manufacture any of our proposed products under GMPs. We intend to rely on collaborators, licensees or contract manufacturers for the commercial manufacture of our proposed products.

Our bremelanotide product candidate is a synthetic peptide. While the production process involves well-established technology, there are few manufacturers capable of scaling up to commercial quantities under GMPs at acceptable costs. We have identified one third-party manufacturer for the production of bremelanotide, and have validated manufacturing of the bremelanotide drug substance under GMPs with that manufacturer. However, we have not negotiated a long-term supply agreement with the third-party manufacturer, and may not be able to enter into a supply agreement on acceptable terms, if at all.

Our PL-3994 product candidate is a peptide mimetic molecule, incorporating a proprietary amino acid mimetic structure and amino acids. We have identified a manufacturer which made the product in quantities sufficient for Phase 1 and some anticipated Phase 2 clinical trials, and are in the process of evaluating commercial-scale manufacturers. Scaling up to commercial quantities may involve production, purification, formulation and other problems not present in the scale of manufacturing done to date.

Certain of our melanocortin receptor agonist product candidate are synthetic peptides, which we have primarily manufactured in-house. We have not contracted with a third-party manufacturer to produce these synthetic peptides for either clinical trials or commercial purposes. While the production process involves well-established technology, there are few manufacturers capable of scaling up to commercial quantities under GMPs at acceptable costs. Additionally, scaling up to commercial quantities may involve production, purification, formulation and other problems not present in the scale of manufacturing done to date.

The failure of any manufacturer or supplier to comply with FDA GMPs or to supply the drug substance and services as agreed, would force us to seek alternative sources of supply and could interfere with our ability to deliver product on a timely and cost effective basis or at all. Establishing relationships with new manufacturers or suppliers, any of whom must be FDA-approved, is a time-consuming and costly process.

Product Liability and Insurance

Our business may be affected by potential product liability risks which are inherent in the testing, manufacturing, marketing and use of our proposed products. We have liability insurance providing up to \$10 million coverage in the

aggregate as to certain clinical trial risks.

Employees

As of October 28, 2010, we employed 30 persons full time, of whom 19 are engaged in research and development activities and 11 are engaged in administration and management. On September 24, 2010, we announced a realignment of our work force with corporate objectives, and anticipate that we will have twenty or fewer full time employees by December 31, 2010. While we have been successful in attracting skilled and experienced scientific personnel, competition for personnel in our industry is intense. None of our employees are covered by a collective bargaining agreement. All of our employees have executed confidentiality and intellectual property agreements. We consider relations with our employees to be good.

From time to time, we hire scientific consultants to work on specific research and development programs. We also rely on independent organizations, advisors and consultants to provide services, including aspects of

manufacturing, clinical management, regulatory strategy and market research. Our independent advisors and consultants sign agreements that provide for confidentiality of our proprietary information and rights to any intellectual property developed while working for us.

PROPERTIES

Our corporate offices and research and development facilities are located at 4C Cedar Brook Drive, Cedar Brook Corporate Center, Cranbury, NJ 08512, where we lease approximately 28,000 square feet under a lease which expires July 17, 2012. We also lease 10,000 square feet of additional office space and 12,000 square feet of laboratory space in two other buildings in the same center under leases that expire in 2015 and February 28, 2012, respectively. The 10,000 square feet of additional office space is subleased to a third party under a sublease that expires February 28, 2012. By the end of 2010, we intend to cease using the 12,000 square feet of laboratory space under the lease that expires February 28, 2012, and are seeking to sublease or otherwise terminate our lease as to this property. The leased properties are in good condition.

LITIGATION

We are involved, from time to time, in various claims and legal proceedings arising in the ordinary course of our business. We are not currently a party to any such claims or proceedings that, if decided adversely to us, would either individually or in the aggregate have a material adverse effect on our business, financial condition or results of operations.

MANAGEMENT

Identification of Directors

The following table sets forth the names, ages, positions and committee memberships of our directors. All directors hold office until the next annual meeting of stockholders or until their successors have been elected and qualified. All current directors were re-elected at our annual stockholders' meeting on May 13, 2010.

Name	Age	Position with Palatin
Carl Spana, Ph.D.	48	Chief executive officer, president and a director
John K.A. Prendergast, Ph.D.	56	Director, chairman of the board of directors
Perry B. Molinoff, M.D.	70	Director
Robert K. deVeer, Jr. (1) (2) (3)	64	Director
Zola P. Horovitz, Ph.D. (1) (2) (3)	75	Director
Robert I. Taber, Ph.D. (1) (2)	74	Director
Errol De Souza, Ph.D. (2) (3)	56	Director
J. Stanley Hull	58	Director

(1) Member of the Audit Committee.

(2) Member of the Compensation Committee.

(3) Member of the Nominating and Corporate Governance Committee.

CARL SPANA, Ph.D., co-founder of Palatin, has been our chief executive officer and president since June 14, 2000. He has been a director of Palatin since June 1996 and has been a director of our wholly-owned subsidiary, RhoMed Incorporated, since July 1995. From June 1996 through June 14, 2000, Dr. Spana served as an executive vice president and our chief technical officer. From June 1993 to June 1996, Dr. Spana was vice president of Paramount Capital Investments, LLC, a biotechnology and biopharmaceutical merchant banking firm, and of The Castle Group Ltd., a medical venture capital firm. Through his work at Paramount Capital Investments and The Castle Group, Dr. Spana co-founded and acquired several private biotechnology firms. From July 1991 to June 1993, Dr. Spana was a Research Associate at Bristol-Myers Squibb, a publicly-held pharmaceutical company, where he was involved in scientific research in the field of immunology. Dr. Spana is a director of AVAX Technologies, Inc., a life science company. Dr. Spana received his Ph.D. in molecular biology from The Johns Hopkins University and his B.S. in biochemistry from Rutgers University.

Dr. Spana's qualifications for our board include his leadership experience, business judgment and industry experience. As a senior executive of Palatin for almost fifteen years, he provides in-depth knowledge of our company, our drug products under development and the competitive and corporate partnering landscape.

JOHN K.A. PRENDERGAST, Ph.D., co-founder of Palatin, has been chairman of the board since June 14, 2000, and a director since August 1996. Dr. Prendergast has been president and sole stockholder of Summercloud Bay, Inc., an independent consulting firm providing services to the biotechnology industry, since 1993. He is a member of the board of AVAX Technologies, Inc. and MediciNova, Inc., life science companies, and was a member of the board of Avigen, Inc. until its acquisition by MediciNova in 2009. Currently, he is the chairman of AVAX Technologies, Inc. and executive chairman of the board of directors of Antyra, Inc., a privately-held biopharmaceutical firm. From October 1991 through December 1997, Dr. Prendergast was a managing director of The Castle Group Ltd., a medical

venture capital firm. Dr. Prendergast received his M.Sc. and Ph.D. from the University of New South Wales, Sydney, Australia and a C.S.S. in administration and management from Harvard University.

Dr. Prendergast is a co-founder of Palatin, and brings a historical perspective to our board coupled with extensive industry experience in corporate development and finance in the life sciences field. His service on other publicly traded company boards provides experience relevant to good corporate governance practices.

PERRY B. MOLINOFF, M.D. has been a director since November 2001. He served as our executive vice president for research and development from September 2001 until November 3, 2003, when he resigned to accept a position as Vice Provost for Research at the University of Pennsylvania, which he held from November 2003 through September 2006. He is also a director of Cypress Bioscience, Inc., a publicly-held life science company. Dr.

Molinoff has more than 30 years of experience in both the industrial and educational sectors. From 1981 to 1994, he was a professor of pharmacology and chairman of the Department of Pharmacology at the University of Pennsylvania School of Medicine in Philadelphia. From January 1995 until March 2001, he was vice president of neuroscience and genitourinary drug discovery for the Bristol-Myers Squibb Pharmaceutical Research Institute, where he was responsible for directing and implementing the Institute's research efforts. Dr. Molinoff earned his medical degree from Harvard Medical School.

Dr. Molinoff has extensive academic and pharmaceutical company experience, with scientific knowledge that makes him a resource to our executive officers and other board members. As a former officer of Palatin, Dr. Molinoff has significant knowledge of our technologies and drug products under development, as well as the markets potentially addressed by our drug products under development.

ROBERT K. deVEER, Jr. has been a director since November 1998. Since January 1997, Mr. deVeer has been the president of deVeer Capital LLC, a private investment company. He is also a director of Solutia Inc., a publicly-held chemical-based materials company. From 1995 until his retirement in 1996, Mr. deVeer served as Managing Director, Head of Industrial Group, at New York-based Lehman Brothers. From 1973 to 1995, he held increasingly responsible positions at New York-based CS First Boston, including Head of Project Finance, Head of Industrials and Head of Natural Resources. He was a managing director, member of the investment banking committee and a trustee of the First Boston Foundation. He received a B.A. in economics from Yale University and an M.B.A. in finance from Stanford Graduate School of Business.

Mr. deVeer has extensive experience in investment banking and corporate finance, including the financing of life sciences companies, and serves as the Audit Committee's financial expert.

ZOLA P. HOROVITZ, Ph.D. has been a director since February 2001. Before he retired from Bristol-Myers Squibb in 1994, Dr. Horovitz spent 34 years in various positions, including associate director of the Squibb Institute for Medical Research, vice president of development, vice president, scientific liaison, vice president of licensing, and vice president of business development and planning for the pharmaceutical division of Bristol-Myers Squibb. He held advisory positions at the University of Pittsburgh, Rutgers College of Pharmacy and Princeton University. He is also currently a director of BioCryst Pharmaceuticals, Inc. and GenVec, Inc., publicly-held life science companies. Within the past five years, Dr. Horovitz also served on the board of directors of Genaera Corp., Immunicon Corp., NitroMed, Inc., Avigen, Inc. and DOV Pharmaceutical, Inc. Dr. Horovitz earned his Ph.D. in pharmacology from the University of Pittsburgh.

Dr. Horovitz has extensive experience in development of pharmaceutical drugs, business development and licensing, and has served on the board of directors of a number of publicly-held life science companies.

ROBERT I. TABER, Ph.D. has been a director since May 2001. Dr. Taber began his career in the pharmaceutical industry in 1962, holding a succession of positions within Schering Corporation's biological research group before leaving in 1982 as director of biological research. He has also held a number of increasingly important positions with DuPont Pharmaceuticals and the DuPont Merck Pharmaceutical Company, including director of pharmaceutical research, director of pharmaceutical and biotechnology research, vice president of pharmaceutical research and vice president of extramural research and development. From 1994 to 1998, Dr. Taber held the position of senior vice president of research and development at Synaptic Pharmaceuticals Corporation before founding Message Pharmaceuticals, Inc. in 1998, serving as president and chief executive officer until 2000. Dr. Taber earned his Ph.D. in pharmacology from the Medical College of Virginia.

Dr. Tabor has extensive experience in pharmaceutical research and development both in large pharmaceutical companies and in smaller biotechnology and biopharmaceutical companies.

ERROL DE SOUZA, Ph.D. has been a director since April 2003. Dr. De Souza has nearly two decades of experience in the field of drug discovery and development. Since March 2010, Dr. De Souza has been president and chief executive officer of Biodel Inc., a publicly-held specialty biopharmaceutical company. From April 2003 to January 2009, Dr. De Souza was president and chief executive officer of Archemix Corporation, a biopharmaceutical company focused on aptamer therapeutics. From September 2002 to March 2003, he was president and chief executive officer and a director of Synaptic Pharmaceuticals. As a result of a merger effective March 2003, Synaptic Pharmaceuticals became a wholly-owned subsidiary of H. Lundbeck A/S, an international pharmaceutical company. Prior to that, Dr. De Souza held senior management positions with Aventis, and its predecessor company Hoechst Marion Roussel Pharmaceuticals, and was co-founder of Neurocrine Biosciences, Inc. He is currently a director of Biodel Inc., Targacept, Inc., a publicly-held life sciences company, and Bionomics Limited, an Australian life science company publicly traded on the Australian Stock Exchange. Within the past five years, Dr. De Souza also served on the board of directors of Archemix Corporation and Idexx Laboratories, Inc. Dr.

De Souza received his B.A. (Honors) in physiology and his Ph.D. in neuroendocrinology from the University of Toronto and he received his postdoctoral fellowship in neuroscience from The Johns Hopkins University School of Medicine.

Dr. De Souza has been the president and chief executive officer of three biopharmaceutical companies and has served on the board of directors of a number of publicly-held life sciences companies, and has extensive experience with biotechnology companies.

J. STANLEY HULL has been a director since September 2005. Mr. Hull has over three decades of experience in the field of sales and marketing. Mr. Hull joined GlaxoSmithKline, a research-based pharmaceutical company, in October 1987 and retired as Senior Vice President, Pharmaceuticals in May 2010, having previously served in the R&D organization of GlaxoSmithKline as Vice President and Worldwide Director of Therapeutic Development and Product Strategy – Neurology and Psychiatry. Prior to that, he was Vice President of Marketing – Infectious Diseases and Gastroenterology for Glaxo Wellcome Inc. Mr. Hull started his career in the pharmaceutical industry with SmithKline and French Laboratories in 1978. Mr. Hull received his B.S. in business administration from the University of North Carolina at Greensboro.

Mr. Hull has extensive experience in commercial operations, development and marketing of pharmaceutical drugs and corporate alliances between pharmaceutical companies and biotechnology companies.

Director Independence

The board of directors has determined that all of the directors except for Dr. Spana (our chief executive officer and president) are independent directors, as defined in the NYSE Amex listing standards.

Executive Officers

Executive officers are appointed by the board and serve at the discretion of the board. Each officer holds his position until his successor is appointed and qualified. The current executive officers hold office under employment agreements.

Name	Age	Position with Palatin
Carl Spana, Ph.D.	48	Chief executive officer, president and director
Stephen T. Wills, MST, CPA	53	Chief financial officer and executive vice president of operations, secretary and treasurer
Trevor Hallam, Ph.D.	52	Executive vice president of research and development

Additional information about Dr. Spana is included above under the heading “Identification of Directors.”

STEPHEN T. WILLIS, MST, CPA, has been vice president, secretary, treasurer and chief financial officer since 1997 and has been executive vice president of operations since 2005. From July 1997 to August 2000, Mr. Willis was also a vice president and the chief financial officer of Derma Sciences, Inc., a publicly-held company which provides wound and skin care products, and currently serves as lead director of Derma. Mr. Willis is also a director of U.S. Helicopter Corp., a publicly-held company. From 1991 to August 2000, he was the president and chief operating officer of Golomb, Willis & Company, P.C., a public accounting firm. Mr. Willis, a certified public accountant, received his B.S.

in accounting from West Chester University, and an M.S. in taxation from Temple University.

TREVOR HALLAM, Ph.D., has been executive vice president of research and development since May 2005. From 1996 to 2005, Dr. Hallam held senior management positions within AstraZeneca R&D, including vice president of biologics based out of the UK, vice president of respiratory and inflammation research based in Sweden and vice president of medical affairs within the United States. From 1985 to 1995, Dr. Hallam served in senior management positions within Smith Kline and French Research, Glaxo Group Research, Roche Research and Rhone-Poulenc Rorer. Dr. Hallam joined the pharmaceutical industry after a postdoctoral fellowship at the Physiological Laboratory, University of Cambridge, UK. He earned his Ph.D. in biochemistry from the University of London and his B.Sc. from the University of Leeds.

EXECUTIVE COMPENSATION

Summary Compensation Table

The following table summarizes the compensation earned by or paid to our principal executive officer, principal financial officer and our one other executive officer (our named executive officers) for our fiscal years ended June 30, 2010 and 2009. We have no non-equity incentive plan, no defined benefit or actuarial pension plan, and no deferred compensation plan.

Name and Principal Position	Fiscal Year	Salary (\$)	Bonus (1) (\$)	Stock awards (2) (\$)	Option awards (2) (\$)	All other compensation (3) (\$)	Total (\$)
Carl Spana, Ph.D., chief executive officer and president	2010	390,000	0	0	62,305	12,250	464,555
	2009	390,000	25,000	22,500	38,455	9,750	485,705
Stephen T. Wills, MST, CPA, chief financial officer and executive vice president of operations	2010	321,000	0	0	49,844	12,250	383,094
	2009	321,000	25,000	22,500	30,764	11,500	410,764
Trevor Hallam, Ph.D., executive vice president of research and development	2010	321,000	0	0	49,844	12,250	383,094
	2009	321,000	25,000	22,500	30,764	11,500	410,764

(1) Performance based bonus amounts for fiscal 2009 were paid on December 31, 2008. There were no bonuses awarded to any of our executive officers for fiscal 2010.

(2) Amounts in these columns represent the aggregate grant date fair value for stock awards and option awards computed in accordance with FASB ASC Topic 718. For a description of the assumptions we used to calculate these amounts, see Note 9 to the consolidated financial statements included in this prospectus and Note 9 to the consolidated financial statements included in our Annual Report on Form 10-K for the fiscal year ended June 30, 2009.

(3) Consists of matching contributions to 401(k) plan accounts.

Employment Agreements

Effective July 1, 2010, we entered into employment agreements with Dr. Spana, Mr. Wills and Dr. Hallam, which continue through June 30, 2013 unless terminated earlier. Under these agreements, which replace substantially similar agreements that expired on June 30, 2010, Dr. Spana is serving as chief executive officer and president at a base salary of \$390,000 per year; Mr. Wills is serving as chief financial officer and executive vice president of operations at a

base salary of \$321,000 per year; and Dr. Hallam is serving as executive vice president of research and development at a base salary of \$321,000 per year. Each agreement also provides for:

- annual discretionary bonus compensation, in an amount to be decided by the Compensation Committee and approved by the board, based on achievement of yearly objectives; and
- participation in all benefit programs that we establish, to the extent the executive's position, tenure, salary, age, health and other qualifications make him eligible to participate.

Each agreement allows us or the executive to terminate the agreement upon written notice, and contains other provisions for termination by us for "cause," or by the employee for "good reason" or due to a "change in control" (as these terms are defined in the employment agreements and set forth below). Early termination may, in some circumstances, result in severance pay at the salary then in effect, plus continuation of medical and dental benefits then in effect for a period of two years (Dr. Spana) or 18 months (Mr. Wills and Dr. Hallam). In addition, the agreements provide that options and restricted stock units granted to these officers accelerate upon termination of employment except for voluntary resignation by the officer or termination for cause. In the event of retirement,

termination by the officer for good reason, or termination by us other than for “cause”, options may be exercised until the earlier of twenty-four months following termination or expiration of the option term. Arrangements with our named executive officers in connection with a termination following a change in control are described below. Each agreement includes non-competition, non-solicitation and confidentiality covenants.

The Compensation Committee determined not to award any discretionary bonuses to our named executive officers or to authorize any increase in our named executive officers’ salaries for fiscal 2010, based on results of operations during fiscal 2009, including our financial condition and our common stock price.

Stock Option and Restricted Stock Unit Grants

In October 2006, we granted 37,500, 30,000 and 30,000 restricted stock units to Dr. Spana, Mr. Wills and Dr. Hallam, respectively, which vested on March 26, 2010. The terms of these restricted stock units require that each executive retain ownership of at least 33% of the vested stock for the duration of the executive’s employment with us unless there is a change in control or for hardship as determined by the board of directors. In connection with the grant of the restricted stock units to our executive officers in October 2006, we determined at that time that the executive officers would not receive any further stock options or stock awards during the remainder of fiscal 2007 or the next three fiscal years thereafter, subject, however, to annual review by the Compensation Committee, which is authorized to make additional grants if warranted based on market conditions, our common stock price, the need to retain our executive officers and the interests of our stockholders.

In fiscal 2008, the Compensation Committee determined that additional stock option grants were necessary in order to motivate and retain our executive officers, and on March 26, 2008, Dr. Spana, Mr. Wills and Dr. Hallam were granted options to purchase 37,500, 30,000 and 30,000 shares of common stock, respectively, vesting over four years. Twenty-five percent of the shares underlying each option were granted at an exercise price in excess of the fair market value on the date of grant in order to incentivize the executive to improve our financial condition.

In each of fiscal 2009 and 2010, the Compensation Committee determined that additional equity grants were necessary in order to motivate and retain our executive officers. Effective on each of July 1, 2008 and July 1, 2009, Dr. Spana, Mr. Wills and Dr. Hallam were granted options to purchase 25,000, 20,000 and 20,000 shares of common stock, respectively, vesting over four years with an exercise price equal to the closing price of our common stock on the respective date of grant. In addition, on December 10, 2008, we granted restricted stock units as to 25,000 shares of common stock to each of Dr. Spana, Mr. Wills and Dr. Hallam, which vested on December 31, 2009.

On July 21, 2010, we granted 25,000, 20,000 and 20,000 restricted stock units to Dr. Spana, Mr. Wills and Dr. Hallam, respectively, which will vest as to 50% on September 15, 2010 and the remaining 50% on March 15, 2011, provided that the executive remains employed by us through such dates, subject to earlier vesting in the event of a change in control or termination of employment other than a voluntary termination or termination for cause.

Outstanding Equity Awards at 2010 Fiscal Year-End

The following table summarizes all of the outstanding equity awards granted to our named executive officers as of June 30, 2010, the end of our fiscal year. No stock awards were outstanding as of June 30, 2010.

Name	Option grant date	Option awards (1)		Option exercise price (\$)	Option expiration date
		Number of securities underlying unexercised options (#) exercisable	Number of securities underlying unexercised options (#) unexercisable

	07/01/09	0	20,000	2.80	07/01/19

(1) Stock option vesting schedules: All options granted before October 6, 2006 have fully vested. Options granted on or after October 6, 2006 vest over four years with 1/4 of the shares vesting per year starting on the first anniversary of the grant date.

Termination and Change-In-Control Arrangements

The employment agreements and restricted stock unit agreements with Dr. Spana, Mr. Wills and Dr. Hallam contain the following provisions concerning severance compensation and the vesting of stock options and restricted stock units upon termination of employment or upon a change in control. The executive's entitlement to severance, payment of health benefits and accelerated vesting of options is contingent on the executive executing a general release of claims against us.

Termination Without Severance Compensation. Regardless of whether there has been a change in control, if we terminate employment for cause or the executive terminates employment without good reason (as those terms are defined in the employment agreement and set forth below), then the executive receives only his accrued salary and vacation benefits through the date of termination. He may also elect to receive medical and dental benefits pursuant to COBRA for up to eighteen months, but must remit the cost of coverage to us. Under the terms of our outstanding options and restricted stock units, all unvested options and restricted stock units would terminate immediately, and vested options would be exercisable for three months after termination.

Severance Compensation Without a Change in Control. If we terminate or fail to extend the employment agreement without cause, or the executive terminates employment with good reason, then the executive will receive as severance pay his salary then in effect, paid on our regular pay schedule, plus medical and dental benefits at our expense, for a period of two years (Dr. Spana) or 18 months (Mr. Wills and Dr. Hallam) after the termination date. In addition, upon such event all unvested options would immediately vest and be exercisable for two years after the termination date or, if earlier, the expiration of the option term, and all unvested restricted stock units would accelerate and become fully vested.

Severance Compensation After a Change in Control. If, within one year after a change in control, we terminate employment or the executive terminates employment with good reason, then the executive will receive as severance pay 200% (Dr. Spana) or 150% (Mr. Wills and Dr. Hallam) of his salary then in effect, paid in a lump sum, plus medical and dental benefits at our expense, for a period of two years (Dr. Spana) or 18 months (Mr. Wills and Dr. Hallam) after the termination date. We would also reimburse the executive for up to \$25,000 in fees and expenses during the six months following termination, for locating employment. We would also reimburse the executive for any excise tax he might incur on "excess parachute payments" (as defined in Section 280G(b) of the Internal Revenue Code). All unvested options would immediately vest and be exercisable for two years after the termination date or, if earlier, the expiration of the option term. All unvested restricted stock units would vest upon a change in control, without regard to whether the executive's employment is terminated.

Option Vesting Upon a Change in Control. A change in control by itself does not change compensation or benefits while the employment agreement remains in effect. However, if any options are to be terminated in connection with a change in control, those options will vest in full immediately before the change in control.

Definitions. Under the employment agreements, a “change in control,” “cause” and “good reason” are defined as follows:

A “change in control” occurs when:

- (a) some person or entity acquires more than 50% of the voting power of our outstanding securities;
- (b) the individuals who, during any twelve month period, constitute our board of directors cease to constitute at least a majority of the board of directors;

- (c) we enter into a merger or consolidation; or
- (d) we sell substantially all our assets.

The term “cause” means:

- (a) the occurrence of (i) the executive’s material breach of, or habitual neglect or failure to perform the material duties which he is required to perform under, the terms of his employment agreement; (ii) the executive’s material failure to follow the reasonable directives or policies established by or at the direction of our board of directors; or (iii) the executive’s engaging in conduct that is materially detrimental to our interests such that we sustain a material loss or injury as a result thereof, provided that the breach or failure of performance is not cured, to the extent cure is possible, within ten days of the delivery to the executive of written notice thereof;
- (b) the willful breach by the executive of his obligations to us with respect to confidentiality, invention and non-disclosure, non-competition or non-solicitation; or
 - (c) the conviction of the executive of, or the entry of a pleading of guilty or nolo contendere by the executive to, any crime involving moral turpitude or any felony.

The term “good reason” means the occurrence of any of the following, with our failure to cure such circumstances within 30 days of the delivery to us of written notice by the executive of such circumstances:

- (a) any material adverse change in the executive’s duties, authority or responsibilities, which causes the executive’s position with us to become of significantly less responsibility, or assignment of duties and responsibilities inconsistent with the executive’s position;
- (b) a material reduction in the executive’s salary;
- (c) our failure to continue in effect any material compensation or benefit plan in which the executive participates, unless an equitable arrangement has been made with respect to such plan, or our failure to continue the executive’s participation therein (or in a substitute or alternative plan) on a basis not materially less favorable, both in terms of the amount of benefits provided and the level of the executive’s participation relative to other participants;
- (d) our failure to continue to provide the executive with benefits substantially similar to those enjoyed by the executive under any of our health and welfare insurance, retirement and other fringe-benefit plans, the taking of any action by us which would directly or indirectly materially reduce any of such benefits, or our failure to provide the executive with the number of paid vacation days to which he is entitled; or
- (e) the relocation of the executive to a location which is a material distance from Cranbury, New Jersey.

Director Compensation

The following table sets forth the compensation we paid to all directors during fiscal 2010, except for Dr. Spana, whose compensation is set forth above in the Summary Compensation Table and related disclosure. Dr. Spana did not receive any separate compensation for his services as a director.

Name	Fees earned or	Option awards		Total (\$)
	paid in cash (\$)	(\$)	(1) (2)	

John K.A. Prendergast, Ph.D.	60,000	14,953	74,953
Perry B. Molinoff, M.D.	30,000	9,969	39,969
Robert K. deVeer, Jr.	34,000	9,969	43,969
Zola P. Horovitz, Ph.D.	30,000	9,969	39,969
Robert I. Taber, Ph.D.	32,000	9,969	41,969
Errol De Souza, Ph.D.	30,000	9,969	39,969

Name	Fees earned or paid in cash (\$)	Option awards (\$) (1) (2)	Total (\$)
J. Stanley Hull	30,000	9,969	39,969

(1) Amounts in this column represent the aggregate grant date fair value for option awards granted in fiscal 2010 computed in accordance with FASB ASC Topic 718. For a description of the assumptions we used to calculate these amounts, see Note 9 to the consolidated financial statements included in this prospectus.

(2) The aggregate number of shares underlying option awards outstanding at June 30, 2010 for each director was:

Dr. Prendergast	76,100
Dr. Molinoff	56,458
Mr. deVeer	45,500
Dr. Horovitz	39,500
Dr. Taber	39,000
Dr. De Souza	34,875
Mr. Hull	30,666

Non-Employee Directors' Option Grants. Non-employee directors receive an annual option grant on the first day of each fiscal year, or such later date as may be determined by the board. On July 1, 2009, the first day of our last completed fiscal year, the chairman of the board received an option to purchase 6,000 shares of common stock and each other non-employee director received an option to purchase 4,000 shares of common stock. All of these options have an exercise price of \$2.80 per share, the closing price of our common stock on the date of grant, vested in twelve monthly installments beginning July 31, 2009, expire ten years from the date of grant and provide for accelerated vesting in the event of involuntarily termination as a director following a change in control, with exercise permitted following accelerated vesting for up to the earlier of one year after termination or the expiration date of the option. In addition, on the same date Mr. deVeer received an additional option to purchase 3,500 shares of common stock, with an exercise price of \$2.80 per share, relating to his services as member and chairman of the Audit Committee and as an Audit Committee financial expert. The additional option granted to Mr. deVeer vests in four annual installments on the anniversary of the date of grant, expires ten years from the date of grant and provides for accelerated vesting in the event of involuntary termination as a director following a change in control, with exercise permitted following accelerated vesting for up to the earlier of one year after termination or the expiration of the option.

On July 21, 2010, as the annual option grant for the current fiscal year, the chairman of the board received an option to purchase 6,000 shares of common stock and each other non-employee director received an option to purchase 4,000 shares of common stock. All of these options have an exercise price of \$1.70 per share, the closing price of our common stock on the date of grant, vest in twelve monthly installments beginning on July 31, 2010, expire ten years from the date of grant and provide for accelerated vesting in the event of involuntarily termination as a director following a change in control, with exercise permitted following accelerated vesting for up to the earlier of one year after termination or the expiration date of the option.

Non-Employee Directors' Cash Compensation. Dr. Prendergast serves as chairman of the board and receives an annual retainer of \$60,000, payable quarterly. Other non-employee directors receive an annual retainer of \$30,000, payable on a quarterly basis, with the Audit Committee chairperson and Compensation Committee chairperson receiving an additional \$4,000 and \$2,000, respectively, payable on a quarterly basis.

Non-Employee Directors' Expenses. Non-employee directors are reimbursed for expenses incurred in performing their duties as directors, including attending all meetings of the board and any committees on which they serve.

Employee Directors. Employee directors are not separately compensated for services as directors, but are reimbursed for expenses incurred in performing their duties as directors, including attending all meetings of the board and any committees on which they serve.

SECURITY OWNERSHIP OF CERTAIN BENEFICIAL OWNERS AND MANAGEMENT

The tables below show the beneficial stock ownership and voting power, as of October 28, 2010, of:

- each director, each of the named executive officers, and all current directors and officers as a group; and
- all persons who, to our knowledge, beneficially own more than five percent of the common stock or Series A preferred stock.

“Beneficial ownership” here means direct or indirect voting or investment power over outstanding stock and stock which a person has the right to acquire now or within 60 days after October 28, 2010. See the footnotes for more detailed explanations of the holdings. To our knowledge, the persons named in the tables beneficially own and have sole voting and investment power over all shares listed.

The common stock has one vote per share and the Series A preferred stock has approximately 5.38 votes per share. Voting power is calculated on the basis of the aggregate of common stock and Series A preferred stock outstanding as of October 28, 2010, on which date 11,839,028 shares of common stock and 4,997 shares of Series A preferred stock were outstanding.

The address for all members of our management is c/o Palatin Technologies, Inc., 4C Cedar Brook Drive, Cranbury, NJ 08512. Addresses of other beneficial owners are in the table.

CERTAIN RELATIONSHIPS AND RELATED TRANSACTIONS

As a condition of employment, we require all employees to disclose in writing actual or potential conflicts of interest, including related party transactions. Our code of corporate conduct and ethics, which applies to employees, officers and directors, requires that the Audit Committee review and approve related party transactions. Since July 1, 2007, there have been no transactions or proposed transactions in which we were or are to be a participant, in which any related person had or will have a direct or indirect material interest.

DESCRIPTION OF SECURITIES

General

The following description of our capital stock is intended as a summary only and is qualified in its entirety by reference to our amended and restated certificate of incorporation and bylaws, which are filed as exhibits to the registration statement of which this prospectus forms a part.

Our authorized capital stock consists of 40,000,000 shares of common stock, par value \$0.01 per share, and 10,000,000 shares of preferred stock, par value \$0.01 per share, 9,736,000 of which shares of preferred stock are undesignated.

As of June 30, 2010, 11,702,818 shares of our common stock were outstanding. In addition, as of June 30, 2010, we had outstanding options to purchase 957,373 shares of our common stock under our stock plans, at a weighted average exercise price of \$13.20 per share, with options as to 631,313 shares vested and exercisable, at a weighted average exercise price of \$18.00. As of June 30, 2010, we also had outstanding warrants representing the right to acquire a total of 1,585,454 shares of our common stock at a weighted average exercise price of \$8.36. As of June 30, 2010, we also had outstanding 4,997 shares of Series A Convertible Preferred Stock, convertible into 26,865 shares of common stock.

Common Stock

Holders of our common stock are entitled to one vote per share for the election of directors and on all other matters that require stockholder approval. Holders of shares of common stock do not have any cumulative voting rights. Subject to any preferential rights of any outstanding preferred stock, in the event of our liquidation, dissolution or winding up, holders of our common stock are entitled to share ratably in the assets remaining after payment of liabilities and the liquidation preferences of any outstanding preferred stock. Our common stock does not carry any redemption rights or any preemptive or preferential rights enabling a holder to subscribe for, or receive shares of, any class of our common stock or any other securities convertible into shares of any class of our common stock.

Preferred Stock

We have the authority to issue 10,000,000 shares of preferred stock. As of June 30, 2010, 264,000 shares of our preferred stock were designated as a single class, Series A Convertible Preferred Stock, of which 4,997 shares were outstanding (see "Series A Convertible Preferred Stock" below). The description of preferred stock provisions set forth below is not complete and is subject to and qualified in its entirety by reference to our amended and restated certificate of incorporation and the certificate of designations relating to the Series A Convertible Preferred Stock.

The board of directors has the right, without the consent of holders of common stock, to designate and issue one or more series of preferred stock, which may be convertible into common stock at a ratio determined by the board. A series of preferred stock may bear rights superior to common stock as to voting, dividends, redemption, distributions in liquidation, dissolution, or winding up, and other relative rights and preferences. The board may set the following terms of any series preferred stock:

- the number of shares constituting the series and the distinctive designation of the series;
- dividend rates, whether dividends are cumulative, and, if so, from what date and the relative rights of priority of payment of dividends;
- voting rights and the terms of the voting rights;

- conversion privileges and the terms and conditions of conversion, including provision for adjustment of the conversion rate;
- redemption rights and the terms and conditions of redemption, including the date or dates upon or after which shares may be redeemable, and the amount per share payable in case of redemption, which may vary under different conditions and at different redemption dates;
 - sinking fund provisions for the redemption or purchase of shares;
- rights in the event of voluntary or involuntary liquidation, dissolution or winding up of the corporation, and the relative rights of priority of payment; and

- any other relative powers, preferences, rights, privileges, qualifications, limitations and restrictions of the series.

Dividends on outstanding shares of preferred stock will be paid or declared and set apart for payment before any dividends may be paid or declared and set apart for payment on the common stock with respect to the same dividend period.

If upon any voluntary or involuntary liquidation, dissolution or winding up of the corporation, the assets available for distribution to holders of preferred stock are insufficient to pay the full preferential amount to which the holders are entitled, then the available assets will be distributed ratably among the shares of all series of preferred stock in accordance with the respective preferential amounts (including unpaid cumulative dividends, if any) payable with respect to each series.

Holders of preferred stock will not be entitled to preemptive rights to purchase or subscribe for any shares of any class of capital stock of the corporation. The preferred stock will, when issued, be fully paid and nonassessable. The rights of the holders of preferred stock will be subordinate to those of our general creditors.

Series A Convertible Preferred Stock

The board of directors established a series of 264,000 shares of preferred stock, designated Series A Convertible Preferred Stock, par value \$0.01 per share (the "Series A"). We issued 137,780 shares of Series A in 1997, of which 4,997 shares remain outstanding as of September 26, 2007, the rest having been converted into common stock. The Series A has the following rights and preferences.

Optional conversion. Each share of Series A is convertible at any time, at the option of the holder, into the number of shares of common stock equal to \$100 divided by the conversion price, as defined in the Series A certificate of designations. The current conversion price is \$18.60, so each share of Series A is currently convertible into approximately 5 shares of common stock.

Mandatory conversion. We may, at our option, cause the conversion of the Series A, in whole or in part, on a pro rata basis, into common stock, if the closing bid price of the common stock has exceeded 200% of the conversion price for at least 20 trading days in any 30 consecutive trading day period, ending three days prior to the date of mandatory conversion.

Price protection provisions. The conversion price decreases if we sell common stock (or equivalents) for a price per share less than the conversion price or less than the market price of the common stock. The conversion price is also subject to adjustment upon the occurrence of a merger, reorganization, consolidation, reclassification, stock dividend or stock split which results in an increase or decrease in the number of shares of common stock outstanding.

Dividend and distribution preference. We may not pay a dividend or make any distribution to holders of any other capital stock unless and until we first pay a special dividend or distribution of \$100 per share to the holders of Series A.

Liquidation preference. Upon (i) liquidation, dissolution or winding up of the Company, whether voluntary or involuntary, (ii) sale or other disposition of all or substantially all of the assets of the Company, or (iii) any consolidation, merger, combination, reorganization or other transaction in which Palatin is not the surviving entity or in which the shares of common stock constituting in excess of 50% of the voting power of the Company are exchanged for or changed into other stock or securities, cash and/or any other property, after payment or provision for payment of the debts and other liabilities of the Company, the holders of Series A will be entitled to receive, pro rata and in preference to the holders of any other capital stock, an amount per share equal to \$100 plus accrued but unpaid

dividends, if any.

Voting rights. Each holder of Series A has the number of votes equal to the number of shares of common stock issuable upon conversion of the holder's Series A at the record date for determination of the stockholders entitled to vote or, if no record date is established, at the date a vote is taken. Except as provided above or as required by applicable law, the holders of the Series A are entitled to vote together with the holders of the common stock and not as a separate class.

Warrants

As of June 30, 2010, warrants for the issuance of 1,585,454 shares of our common stock were outstanding, which are exercisable at a weighted average exercise price of \$8.36, all of which are exercisable through various dates expiring between December 15, 2010 and August 12, 2014. This description of the warrants is only a

summary, and is qualified in its entirety by the provisions of the forms of the warrants, which are attached as exhibits to the registration statement of which this prospectus forms a part.

Unit Offering and Unit Warrants

In connection with this offering, we will sell common stock and warrants in units, with each unit consisting of one share of common stock and a warrant exercisable for [*] shares of our common stock. Units will not be issued or certificated. The shares of common stock and warrants are immediately separable and will be issued separately.

Unit Warrants. The warrants offered in this offering will be issued in registered form pursuant to a securities purchase agreement between each of the purchasers and us. You should review the forms of securities purchase agreement and warrant, forms of which are attached as exhibits to the registration statement of which this prospectus forms a part, for a complete description of the terms and conditions applicable to warrants. The following is a brief summary of the warrants and is subject in all respects to the provisions contained in such warrants.

Holders may exercise the warrants [*] issuance and at any time up to the date that is [*] years after the date of such issuance. The warrants will be exercisable, at the option of each holder, in whole or in part, by delivering to us a duly executed exercise notice accompanied by payment in full for the number of shares of our common stock purchased upon such exercise, except in the case of a cashless exercise, as discussed below.

Each warrant is exercisable for [*] of one share of common stock at an exercise price of \$[*] per share of common stock being purchased. The exercise price is subject to appropriate adjustment in the event of stock dividends and distributions, stock splits, stock combinations, reclassifications or similar events affecting our common stock.

If, at any time during the warrant exercisability period, the holder is not permitted to sell shares of common stock issuable upon exercise of the warrant pursuant to the registration statement, or an exemption from registration is not otherwise available, and the fair market value of our common stock exceeds the exercise price of the warrants, the holder may elect to effect a cashless exercise of the warrants, in whole or in part, by surrendering the warrants to us, together with delivery to us of a duly executed exercise notice, and canceling a portion of the relevant warrant in payment of the purchase price payable in respect of the number of shares of our common stock purchased upon such exercise.

Subject to applicable securities laws and otherwise set forth in the warrants, the warrants are transferable, in whole or in part upon surrender of the warrants at the principal office of the company or its designated agent, together with an assignment form as provided in the warrants.

We do not plan on making an application to list the warrants on the NYSE Amex, any national securities exchange or other nationally recognized trading system. The common stock underlying the warrants is expected to be listed on the NYSE Amex.

Except as otherwise provided in the warrants or by virtue of such holder's ownership of shares of our common stock, the holders of the warrants do not have the rights or privileges of holders of our common stock, including any voting rights, until they exercise their warrants.

No fractional shares will be issued upon exercise of the warrants, but rather we will pay a cash adjustment in respect of such fraction in an amount equal to such fraction multiplied by the exercise price.

Anti-Takeover Effects of Provisions of Delaware Law and Our Charter Documents

Amended and Restated Certificate of Incorporation. Our amended and restated certificate of incorporation authorizes the issuance of up to 10,000,000 shares of preferred stock, par value \$.01 per share, of which 264,000 shares are currently designated as Series A Convertible Preferred Stock. The board of directors has the authority, without further approval of the stockholders, to issue and determine the rights and preferences of other series of preferred stock, except as limited by the certificate of designation for the Series A. The board could issue one or more series of preferred stock with voting, conversion, dividend, liquidation, or other rights which would adversely affect the voting power and ownership interest of holders of common stock. This authority may have the effect of deterring hostile takeovers, delaying or preventing a change in control, and discouraging bids for our common stock at a premium over the market price.

Section 203 of the Delaware General Corporation Law. We are subject to Section 203 of the Delaware General Corporation Law, which, subject to certain exceptions, prohibits a Delaware corporation from engaging in

any business combination with any interested stockholder for a period of three years following the time that such stockholder became an interested stockholder, unless:

- prior to such time, the board of directors approved either the business combination or the transaction that resulted in the stockholder becoming an interested holder;
- upon consummation of the transaction that resulted in the stockholder becoming an interested stockholder, the interested stockholder owned at least 85% of the voting stock of the corporation outstanding at the time the transaction commenced, excluding for purposes of determining the number of shares outstanding those shares owned (a) by persons who are directors and also officers and (b) by employee stock plans in which employee participants do not have the right to determine confidentially whether shares held subject to the plan will be tendered in a tender or exchange offer; or
- at or subsequent to such time, the business combination is approved by the board of directors and authorized at an annual or special meeting of stockholders, and not by written consent, by the affirmative vote of at least two thirds of the outstanding voting stock which is not owned by the interested stockholder.

In general, Section 203 defines “business combination” to include the following:

- any merger or consolidation involving the corporation and the interested stockholder;
- any sale, transfer, pledge or other disposition of 10% or more of the assets of the corporation involving the interested stockholder;
- subject to certain exceptions, any transaction that results in the issuance or transfer by the corporation of any stock of the corporation to the interested stockholder;
- any transaction involving the corporation that has the effect of increasing the proportionate share of the stock or any class or series of the corporation beneficially owned by the interested stockholder; or
- the receipt by the interested stockholder of the benefit of any loans, advances, guarantees, pledges or other financial benefits provided by or through the corporation.

In general, Section 203 defines “interested stockholder” as an entity or person beneficially owning 15% or more of the outstanding voting stock of the corporation and any entity or person affiliated with or controlling or controlled by such entity or person.

Indemnification and Limitation of Liability. Our amended and restated certificate of incorporation and bylaws require us to indemnify our directors, officers, employees and agents against the costs (including fines, judgments and attorney fees) from involvement in legal proceedings arising from their position or service, provided that the person seeking indemnification acted:

- in good faith;
- in a manner he or she reasonably believed to be in, or not opposed to, the best interests of the corporation; and,
- with respect to any criminal action or proceeding, had no reasonable cause to believe his or her conduct was unlawful.

The amended and restated certificate of incorporation and bylaws allow us to buy indemnification insurance for this purpose.

Our certificate of incorporation provides that, to the fullest extent permissible under Delaware law, no director shall be personally liable to the corporation or its stockholders for monetary damages for breach of a fiduciary duty as a director. However, this provision does not eliminate the duty of care, and in appropriate circumstances, equitable remedies such as injunctive or other forms of non-monetary relief that will remain available under Delaware law. In addition, each director will continue to be subject to liability for (a) breach of the director's duty of loyalty to us or our stockholders, (b) acts or omissions not in good faith or which involve intentional misconduct or a knowing violation of law, (c) violating Section 174 of the Delaware General Corporation Law, or (d) any transaction from which the director derived an improper personal benefit. The provision also does not affect a director's responsibilities under any other law, such as the federal securities laws or state or federal environmental laws.

Market Information

Our common stock is quoted on the NYSE Amex under the symbol "PTN." On October 28, 2010, the closing price of the common stock was \$1.37.

Transfer Agent and Registrar

The transfer agent for our common stock is American Stock Transfer & Trust Company, located at 59 Maiden Lane, Plaza Level, New York, New York 10038.

PLAN OF DISTRIBUTION

We are offering up to _____ units, each consisting of one share of common stock and one warrant to purchase _____ shares of common stock for an assumed offering price of \$ _____ per unit. Pursuant to an engagement letter agreement, we engaged [*] as our placement agent for this offering. [*] is not purchasing or selling any units, nor are they required to arrange for the purchase and sale of any specific number or dollar amount of units, other than to use their “best efforts” to arrange for the sale of units by us. Therefore, we may not sell the entire amount of units being offered.

Upon the closing of the offering, we will pay the placement agent a cash transaction fee equal to [*] percent ([*]%) of the gross proceeds to us from the sale of the units in the offering. We are not obligated to pay the placement agent a fee upon exercise of the warrants included in the units.

Upon the closing of the offering, we will also pay the placement agent a non-accountable expense allowance of [*] percent ([*]%) of the gross proceeds to us from the sale of units in the offering.

In addition, we agreed to grant a [*]-year (from the closing of the offering) compensation warrant to the placement agent to purchase a number of shares of our common stock equal to [*] percent ([*]%) of the number of shares of common stock contained in the units sold by us in the offering, but excluding the shares that may be issued upon exercise of the warrants included in the offering. The compensation warrants will have a per unit exercise price equal to [*]% of the public offering price of the units and will be exercisable 12 months after the date of this prospectus. The compensation warrants will comply with FINRA Rule 5110(g)(1) in that for a period of six months after the issuance date of the compensation warrants (which shall not be earlier than the closing date of the offering pursuant to which the compensation warrants are being issued), neither the compensation warrants nor any warrant shares issued upon exercise of the compensation warrants shall be (A) sold, transferred, assigned, pledged, or hypothecated, or (B) the subject of any hedging, short sale, derivative, put, or call transaction that would result in the effective economic disposition of the securities by any person for a period of 180 days immediately following the date of effectiveness or commencement of sales of the offering pursuant to which the compensation warrants are being issued, except the transfer of any security as permitted by the FINRA rules.

The placement agent may be deemed to be an underwriter within the meaning of Section 2(a)(11) of the Securities Act of 1933 and any commissions received by it and any profit realized on the sale of the securities by them while acting as principal might be deemed to be underwriting discounts or commissions under the Securities Act of 1933. The placement agent would be required to comply with the requirements of the Securities Act of 1933, as amended, or the Securities Act of 1933, and the Securities Exchange Act of 1934, as amended, or the Exchange Act, including, without limitation, Rule 10b-5 and Regulation M under the Exchange Act. These rules and regulations may limit the timing of purchases and sales of shares of common stock and warrants to purchase shares of common stock by the placement agent. Under these rules and regulations, the placement agent may not (i) engage in any stabilization activity in connection with our securities; and (ii) bid for or purchase any of our securities or attempt to induce any person to purchase any of our securities, other than as permitted under the Exchange Act, until they have completed their participation in the distribution.

The placement agent agreement provides that we will indemnify the placement agent against specified liabilities, including liabilities under the Securities Act of 1933. We have been advised that, in the opinion of the Securities and Exchange Commission, indemnification for liabilities under the Securities Act of 1933 is against public policy as expressed in the Securities Act of 1933 and is therefore unenforceable. The placement agent agreement also provides that the agreement may be terminated by either party upon [*] ([*]) days prior written notice.

Notice to Investors in the United Kingdom

This prospectus is being distributed only to, and is only directed at (i) persons who are outside the United Kingdom; or (ii) investment professionals falling within Article 19(5) of the Financial Services and Markets Act 2000 (Financial Promotion) Order 2005 (the “Order”) or (iii) high net worth entities, and other persons to whom it may lawfully be communicated, falling within Article 49(2)(a) to (e) of the Order or (iv) persons to whom Article 33 of the Order applies (all such persons being referred to as “relevant persons” and each a “relevant person”). Accordingly, by accepting delivery of this prospectus, the recipient warrants and acknowledges that it is such a relevant person and where Article 33 of the Order applies it acknowledges that it has previously been advised (a) that the protections conferred by the Financial Services and Markets Act 2000 (the “Act”) will not apply to any communication in relation to the securities the subject of this prospectus; and (b) that the protections conferred by or under the Act may not apply to any investment activity that may be engaged in as a result of any such

communication. The securities are only available to, and any invitation, offer, or agreement to subscribe, purchase or otherwise acquire such securities will be engaged in only with, relevant persons. Any person who is not a relevant person should not act or rely on this prospectus or any of its contents.

This prospectus has not been approved by an authorized person in the United Kingdom. No person may communicate or cause to be communicated any invitation or inducement to engage in investment activity (within the meaning of section 21(1) of the Act) received by it in connection with the issue or sale of the securities other than in circumstances in which section 21(1) of the Act does not apply to us.

European Economic Area

In particular this document does not constitute an approved prospectus in accordance with European Commission's Regulation on Prospectuses no. 809/2004 and no such prospectus is to be prepared and approved in connection with this offering. Accordingly, in relation to each Member State of the European Economic Area which has implemented the Prospectus Directive (being the Directive of the European Parliament and of the Council 2003/71/EC and including any relevant implementing measure in each Relevant Member State) (each, a Relevant Member State), with effect from and including the date on which the Prospectus Directive is implemented in that Relevant Member State (the Relevant Implementation Date) an offer of securities to the public may not be made in that Relevant Member State prior to the publication of a prospectus in relation to units which has been approved by the competent authority in that Relevant Member State or, where appropriate, approved in another Relevant Member State and notified to the competent authority in that Relevant Member State, all in accordance with the Prospectus Directive, except that it may, with effect from and including the Relevant Implementation Date, make an offer of securities to the public in that Relevant Member State at any time:

- to legal entities which are authorised or regulated to operate in the financial markets or, if not so authorised or regulated, whose corporate purpose is solely to invest in securities;
- to any legal entity which has two or more of (1) an average of at least 250 employees during the last financial year; (2) a total balance sheet of more than €43,000,000 and (3) an annual net turnover of more than €50,000,000, as shown in its last annual or consolidated accounts; or
- in any other circumstances which do not require the publication by the Issuer of a prospectus pursuant to Article 3 of the Prospectus Directive.

For the purposes of this provision, the expression an “offer of securities to the public” in relation to any shares in any Relevant Member State means the communication in any form and by any means of sufficient information on the terms of the offer and the securities to be offered so as to enable an investor to decide to purchase or subscribe the shares, as the same may be varied in that Member State by any measure implementing the Prospectus Directive in that Member State. For these purposes the units are “securities.”

LEGAL MATTERS

The validity of the issuance of the securities offered by this prospectus will be passed upon for us by Thompson Hine LLP, New York, New York. [*] is acting as counsel for the placement agent in this offering.

EXPERTS

The consolidated financial statements of Palatin Technologies, Inc. as of June 30, 2009 and 2010, and for each of the years in the three-year period ended June 30, 2010, have been included herein and in this prospectus in reliance upon the report of KPMG LLP, independent registered public accounting firm, appearing elsewhere herein, and upon the authority of said firm as experts in accounting and auditing. The audit report covering the June 30, 2010 consolidated financial statements contains an explanatory paragraph that states that Palatin Technologies, Inc. has incurred recurring losses and negative cash flows from operations and will require substantial additional financing to continue to fund its planned development activities, which conditions raise substantial doubt about the ability of the Company to continue as a going concern. The consolidated financial statements do not include any adjustments that might result from the outcome of this uncertainty.

WHERE YOU CAN FIND MORE INFORMATION

We have filed a registration statement on Form S-1 under the Securities Act of 1933 with the SEC with respect to the shares of common stock and warrants we are offering by this prospectus. This prospectus does not contain all of the information included in the registration statement. For further information pertaining to us and our common stock, you should refer to the registration statement and the exhibits and schedules filed with the registration statement. Whenever we make reference in this prospectus to any of our contracts, agreements or other documents, the references are not necessarily complete, and you should refer to the exhibits attached to the registration statement for copies of the actual contract, agreement or other document.

We file annual, quarterly and special reports and other information with the SEC (Commission File Number 001-15543). These filings contain important information that does not appear in this prospectus. For further information about us, you may read and copy any reports, statements and other information filed by us at the SEC's Public Reference Room at 100 F Street, N.E., Washington, D.C. 20549-0102. You may obtain further information on the operation of the Public Reference Room by calling the SEC at 1-800-SEC-0330. Our SEC filings are also available on the SEC Internet site at <http://www.sec.gov>, which contains periodic reports and other information regarding issuers that file electronically. You can find information about Palatin on our website at <http://www.palatin.com>. Information found on our website is not part of this prospectus. You may also request a copy of any of our periodic reports filed with the SEC by writing or telephoning us at the following address:

REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

The Board of Directors and Stockholders

Palatin Technologies, Inc.:

We have audited the accompanying consolidated balance sheets of Palatin Technologies, Inc. and subsidiary (the Company) as of June 30, 2010 and 2009, and the related consolidated statements of operations, cash flows, and stockholders' equity and comprehensive loss for each of the years in the three-year period ended June 30, 2010. These consolidated financial statements are the responsibility of the Company's management. Our responsibility is to express an opinion on these consolidated financial statements based on our audits.

We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

In our opinion, the consolidated financial statements referred to above present fairly, in all material respects, the financial position of Palatin Technologies, Inc. and subsidiary as of June 30, 2010 and 2009, and the results of their operations and their cash flows for each of the years in the three-year period ended June 30, 2010, in conformity with U.S. generally accepted accounting principles.

The accompanying consolidated financial statements have been prepared assuming the Company will continue as a going concern. As discussed in note 1 to the consolidated financial statements, the Company has incurred recurring net losses and negative cash flows from operations and will require substantial additional financing to continue to fund its planned development activities. These conditions raise substantial doubt about its ability to continue as a going concern. Management's plans in regard to these matters are also described in note 1. The consolidated financial statements do not include any adjustments that might result from the outcome of this uncertainty.
