## Edgar Filing: INTERNATIONAL BUSINESS MACHINES CORP - Form 8-K

For the fourth-quarter of 2014, IBM reported consolidated net income of \$5.5 billion or \$5.51 of diluted earnings per share, including operating net losses in discontinued operations related to the microelectronics manufacturing business.

Total revenues from continuing operations for the fourth-quarter of 2014 of \$24.1 billion were down 12 percent (down 2 percent, adjusting for the impact of the divested customer care outsourcing and System x businesses and for currency) from the fourth-quarter of 2013 and were down 1 percent for the full year 2014, adjusting for the impact of the divested businesses and for currency.

We are making significant progress in our transformation, continuing to shift IBM's business to higher value, and investing and positioning ourselves for the longer term, said Ginni Rometty, IBM chairman, president and chief executive officer.

In 2014, we repositioned our hardware portfolio for higher value, maintained a services backlog of \$128 billion and achieved strong revenue growth across cloud, analytics, mobile, social and security. Together these strategic imperatives grew 16 percent in 2014 and now represent \$25 billion and 27 percent of our revenue.

### **Fourth-Quarter GAAP Operating (non-GAAP) Reconciliation**

Fourth-quarter operating (non-GAAP) diluted earnings from continuing operations exclude \$0.27 per share of charges; \$0.19 per share for the amortization of purchased intangible assets and other acquisition-related charges; and \$0.08 per share for retirement-related charges driven by changes to plan assets and liabilities primarily related to market performance.

## Expense

Total reported expense and other income from continuing operations declined 20 percent to \$5.8 billion compared with the prior year period. The reported reduction was driven by the gain of \$1.4 billion (\$1.1 billion pre-tax income benefit, net of related transaction and performance-based costs) from the divestiture of the System x business and the elimination of the expense for the System x business from the company's run rate. Without these items, expense and other income would have been up approximately 2 percent. S,G&A expense of \$6.0 billion was up 1 percent from the prior-year period and includes the workforce rebalancing charge of approximately \$580 million. R,D&E expense of \$1.3 billion decreased 9 percent compared with the year-ago period, reflecting the divestiture of the System x business and currency impact. Intellectual property and custom development income decreased to \$199 million compared with \$201 million a year ago. Other (income) and expense was income of \$1.5 billion, including the gain from the divested System x business, compared with prior-year income of \$116 million. Operating (non-GAAP) R,D&E expense of \$1.3 billion was down 7 percent compared with the year-ago period, reflecting the divestiture of the System x business and currency impact.

\*\*\*

IBM's tax rate from continuing operations was 22.3 percent, up 9.8 points year over year; operating (non-GAAP) tax rate was 21.8 percent, up 9.6 points compared to the year-ago period. The change in the fourth-quarter tax rate is driven by prior year discrete tax items, including benefits from tax audit settlements.

Net income margin from continuing operations increased 0.2 points to 22.9 percent. Total operating (non-GAAP) net income margin from continuing operations decreased 0.3 points to 24.0 percent.

The weighted-average number of diluted common shares outstanding in the fourth-quarter 2014 was 995 million, a decrease of 8 percent compared with the same period of 2013. As of December 31, 2014, there were 991 million basic common shares outstanding.

Debt, including Global Financing, totaled \$40.8 billion, compared with \$39.7 billion at year-end 2013, and down \$4.9 billion from the third quarter of 2014. From a management segment view, Global Financing debt totaled \$29.1 billion versus \$27.5 billion at year-end 2013, resulting in a debt-to-equity ratio of 7.2 to 1. Core (non-global financing) debt totaled \$11.7 billion, a decrease of \$0.5 billion since year-end 2013, resulting in a debt-to-capitalization ratio of 59 percent, which includes impacts from retirement plan remeasurement that take into account changes in discount rates and recently released U.S. mortality tables, the announced Microelectronics business divestiture and foreign exchange translation.

IBM ended the fourth-quarter 2014 with \$8.5 billion of cash on hand and generated free cash flow of \$6.6 billion, excluding Global Financing receivables, down approximately \$1.8 billion year over year. In the fourth quarter of 2014, the company returned \$1.2 billion to shareholders through \$1.1 billion in dividends and \$0.1 billion of gross share repurchases.

At the end of December 2014, IBM had approximately \$6.3 billion remaining from the current share repurchase authorization.
