Conclusion

ETFs

offer access to a wide range of asset classes and
strategies

Investor demand for gold has been increasing amid global
and political uncertainty

Access to the gold market varies depending on the
investment vehicle

Gold ETFs backed by physical gold offer investors an innovative way to access the price of gold

APPENDIX

iShares Gold Trust Performance

The performance quoted represents past performance and does not guarantee future results. Investment return and principal value of an investment will fluctuate so that an investor's shares, when sold or redeemed, may be worth more or less than the original cost.

Since Trust Inception

iShares Gold Trust (Trust) has filed a registration statement (including a prospectus) with the SEC for the offering to which this communication relates.

Before you invest, you should read the prospectus and other documents the Trust has filed with the SEC for more complete information about the issuer and this offering.

You may get these documents for free by visiting www.iShares.com or EDGAR on the SEC website

at www.sec.gov. Alternatively, the Trust will arrange to send you the prospectus if you request it by calling toll-free 1-800-474-2737.

Investing involves risk, including possible loss of principal. The iShares Gold Trust (Trust) is not an investment company registered under the Investment Company Act of 1940 or a commodity pool for purposes of the Commodity Exchange Act. Shares of the Trust are not subject to the same regulatory requirements as mutual funds. Because shares of the Trust are created to reflect the price of the gold held by the Trust, the market price of the shares of the Trust will fluctuate with the price of the gold.

shares
will
be
as
unpredictable
as
the
price
of
gold
has
historically
been.

Additionally,

shares of the Trust are bought and sold at market price (not NAV). Brokerage commissions will reduce returns. Shares of the Trust are created to reflect, at any given time, the market price of gold owned by the trust at that time less the trust's expenses and liabilities. The price received upon the sale of the shares, which trade at market price, may be more or less than the value of the gold represented by them. If an investor sells the shares at a time when no active market for them exists, such lack of an active market will most likely adversely affect the price received for the shares. For a more complete discussion of the risk factors relative to the Trust, carefully read the prospectus.

Following an investment in shares of the Trust, several factors may have the effect of causing a decline in the prices of gold and a corresponding decline in the price of the shares. Among them: (i) Large sales by the official sector. A significant portion of the aggregate world gold holdings is owned by governments, central banks and related institutions. If one or more of these institutions decides to sell in amounts large enough to cause a decline in world gold prices, the price of the shares will be adversely affected. (ii) A significant increase in gold hedging activity by gold producers. Should there be an increase in the level of hedge activity of gold producing companies, it could cause a decline in world gold prices, adversely affecting the price of the shares. (iii) A significant change in the attitude of speculators and investors towards gold. Should the speculative community take a negative view towards gold, it could cause a decline in world gold prices, negatively impacting the price of the shares.

The amount of gold represented by shares of the Trust will decrease over the life of the trust due to sales necessary to pay the sponsor's fee and trust expenses. Without increase in the price of gold sufficient to compensate for that decrease, the price of the shares will also decline, and investors will lose money on their investment. The Trust will have limited duration.

The
liquidation
of
the
Trust
may
occur
at
a
time
when
the
disposition
of
the

Trust s
gold
will
result in losses to investors.

Although market makers will generally take advantage of differences between the NAV and the trading price of Trust shares through arbitrage opportunities, there is no guarantee that they will do so. There is no guarantee an active trading market will develop for the shares, which may result in losses on your investment at the time of disposition of your shares. The value of the shares of the Trust will be adversely affected if gold owned by the Trust is lost or damaged in circumstances

in
which
the
Trust
is
not
in
a
position
to
recover
the
corresponding
loss.

The
Trust
is
a
passive
investment

vehicle. This means that the value of your shares may be adversely affected by Trust losses that, if the Trust had been actively managed, it might have been possible to avoid.

Shares of the iShares Gold Trust are not deposits or other obligations of or guaranteed by BlackRock, Inc., and its affiliates, and are not insured by the Federal Deposit Insurance Corporation or any other governmental agency.

BlackRock Asset Management International Inc. (BAMII) is the sponsor of the Trust. BlackRock Fund Distribution Company
