"NEWS RELEASE"

For Immediate Release

July 10, 2006

TSX: CTQ, AMEX: ETQ

MIRADOR NORTE DRILLING IDENTIFIES SIGNIFICANT COPPER DEPOSIT ADJACENT TO MIRADOR COPPER-GOLD PROJECT

Assays have been received from the most recent program of drilling at Mirador Norte, a newly discovered zone of porphyry copper mineralization located approximately 3 km northwest of the planned Mirador open pit. DRILLING SUCCESSFULLY OUTLINED AN APPROXIMATELY 1200 X 300 X 250 METRE CONTIGUOUS ZONE OF COPPER MINERALIZATION ABOVE A 0.4% COPPER CUTOFF. This body is exposed at the surface but open for expansion at depth and to the south. The data is presently being reviewed by Mine Development Associates of Reno, Nevada in preparation of a formal mineral resource assessment, which has been initiated.

The close proximity of Mirador Norte to Mirador would allow for ore from Mirador Norte to be processed in the planned Mirador concentrator. This means that the stages of open pit mining at Mirador could include a stage of ore production from Mirador Norte earlier in the life of the mine, which could add a period of higher grades and lower strip ratios to enhance cash flow from the combined operations.

The current round of drilling at Mirador Norte is comprised of 39 holes totaling 6780 metres of core and supplements the previous drilling of 29 holes totaling 6825 metres. All new holes with assays above the 0.4% cutoff are listed below and a complete listing of all assays and a map of the current round of drilling can be found at www.corriente.com. The longest hole drilled at Mirador Norte to date is MN65, which is in the middle of the deposit and over 420 metres in length. HOLE MN65 HAS AN INTERSECTION OF 350 METRES @ 0.52% Cu AND 0.08 G/T Au, WHICH GENERALLY REPRESENTS THE GRADE OF MIRADOR NORTE'S PRIMARY MINERALIZED BODY.

Corriente is moving towards construction of a starter operation at its Mirador copper-gold operation. Mirador is one of the few new, sizeable copper projects available for near-term production. Corriente controls a 100% interest in over 50,000 hectares located within the Corriente Copper Belt, Ecuador. The Belt currently contains three copper and copper-gold porphyry deposits, Mirador, Panantza and San Carlos, as well as the newly discovered Mirador Norte prospect. Additional exploration activities will be ongoing, as six additional copper and copper-gold exploration targets have been identified in the Corriente Copper Belt to date.

The Qualified Person for this disclosure is John Drobe, P.Geo, Chief Geologist.

"Ken Shannon"

Kenneth R. Shannon
Chief Executive Officer
